Summary

Computer Science graduate student with **4 Years of Experience** in **Full Stack** development, specializing in backend system design, optimization and scaling. Actively seeking full-time opportunities starting **December 2024** that will challenge my development skills and enable me to contribute to impactful projects.

Education

University at Buffalo SUNY, Masters in **Computer Science AI/ML** **Aug 2023 - Dec 2024**

- **Courses:** Operating Systems, Computer Security, Analysis of Algorithms, Machine Learning, Deep Learning, Natural Language Processing, Data Models & Query Languages, Data Mining, Data Intensive Computing, Computer Vision.

Indian Institute of Technology Bhubaneswar, Bachelors in Computer Engineering **July 2016 - June 2020**

Work Experience

Skechers, Senior Software Engineer Intern, California, USA **May 2024 - Aug 2024**

- Spearheaded key features of Skechers **GenAI** platform (SkechAI), to drive business value and improve user interactions.
- Developed Skechers interactive **API portal** documentation using **RapiDoc**, improving user experience.
- **Tech Stack:** Python, JavaScript, ReactJS, MongoDB, Docker, AWS Lambda, AWS CDK, Azure Pipelines, HTML, CSS.

Dealsplus, Senior Software Development Engineer, Remote, India **Feb 2023 - Jan 2024**

- Developed a dynamic capital table comparison tool for private equity fund managers, enabling clients to effortlessly track investments and download comparative capital tables for a single entity across different dates.
- Optimized API response times from **1 min to less than 1 sec** by implementing advanced caching and SQL query optimizations, significantly enhancing system efficiency and user experience.
- **TechStack:** Java, SpringBoot, JavaScript, NextJS, MySQL, Redis, Docker, Azure Pipelines, Github.

Razorpay, Software Development Engineer, Bangalore, India **Aug 2020 - Jan 2023**

- Enhanced partner bank downtime detection algorithm to detect **downtime 3X faster**, enabling rerouting of transfers through healthy banks and improving key metrics of payment **success rates** and **processing times**.
- Exhibited **complete ownership** in the critical FTS Service Database Migration project, including **DB archival** and table **partitioning** for high transaction data, enhancing the service's capacity from **50 to 500 TPS** by alleviating previous database bottlenecks.
- Designed a **new system** to strategically **hold and release payouts** based on bank availability. Managed tech specifications, implementation, testing and rollout. Successfully deployed the feature using **baseline, canary** and **ramped** techniques.
- **TechStack:** GoLang, Java, PHP, JavaScript, React.JS, MySQL, Kafka, Redis, Docker, Kubernetes, AWS, Micro services.

Ciphense, Software Engineer Intern, Remote, India **May 2019 - Jul 2019**

- Developed a user application that verifies and displays documents like visas and passports on the dashboard, using Firebase for data storage and machine learning to extract and present text, enhancing user accessibility and interaction.
- **Tech Stack:** Java, XML, Android Studio, Firebase.

Technical Skills

Languages/Skills: Java, Golang, Python, C++, C, JavaScript, SQL, OOPS, Backend, Distributed Systems, Microservices, Restful APIs, Problem-solving, Data Structures, Algorithms, Design Patterns, Architecture, Web Development, Devops, Agile, Unit Testing, C#, Ruby, .NET, CI/CD, YAML, HTTP, HTML, CSS, GCP, Cloud Infrastructure.

Frameworks/Libraries: SpringBoot, NextJS, React.JS, JUnit, Keras, TensorFlow, PyTorch, NodeJS, TypeScript, Django.

Tools & Databases: MySQL, Kafka, Redis Cache, NoSQL, MongoDB, DynamoDB, PostgreSQL, Elasti Cache, Git, Kubernetes, Visual Studio, Amazon Web Services(AWS), Azure Pipelines, Prometheus, Bash, Docker, Slack, ApacheKafka.

Projects

LLMs in Health Sciences, Natural Language Processing **Feb 2024 - Apr 2024**

- Developed a specialized NLP model by fine-tuning a **DeBERTa v3** model within the **Sebis Pipeline**, automating inference analysis in clinical trial reports on breast cancer.
- Achieved a high **F1 score of 72.34** using only 142M parameters, thereby enhancing the accuracy of medical research conclusions.

Facial Emotion Recognition, Deep Learning **Mar 2024 - May 2024**

- Developed an advanced facial emotion recognition system by integrating **VGG11, LSTM and attention mechanisms**, achieving high predictive accuracy for 'Happy', 'Neutral', 'Angry', 'Sad' and 'Surprise' emotions. This model effectively utilizes both spatial and temporal features to determine the facial emotion.
