EDUCATION

M.S., Information Technology and Management

Aug 2022 - May 2024

University of Texas at Dallas, Richardson, TX

B.Tech., Computer Science and Engineering

Aug 2018 - May 2022

Koneru Lakshmaiah Education Foundation, Vijayawada, IN

TECHNICAL SKILLS

Programming Languages: Python, Java, C.

Databases: PostgreSQL, MySQL, NoSQL, MongoDB, SQL Server, Oracle, SQL, PL/SQL, SparkSQL.

Libraries: Pandas, NumPy, PySpark, Matplotlib.

Project Management: SDLC, Agile, Waterfall, Scrum, Jira, Confluence, GitHub.

Big Data & Tools: Informatica, Apache Solr, Apache Spark, Kafka, Apache Airflow, V-studio.

Cloud: Snowflake, AWS, Microsoft Azure (Databricks, Data Factory).

Data Visualization Tools: Tableau, MS Power BI, QlikView, AWS Quicksight, Microsoft Excel (VLOOKUP, XLOOKUP, Pivot Tables,).

Certifications: [AWS Certified Cloud Practitioner](#), [Microsoft Certified: Power BI Data Analyst](#), [Meta Data Analyst](#), [Microsoft Generative AI for Data Analysis](#)

PROFESSIONAL EXPERIENCE

Data Analyst | Accelyst, USA

June 2025 - Present

- Built end-to-end analytics pipelines using SQL and Python on Snowflake to process 500K+ monthly healthcare claims, enabling clinical and business decision-making.
- Developed Power BI and Tableau dashboards with custom DAX measures and diverse visualizations (bar, line, pie, tree map, scatter, area..etc) to track cost utilization, patient risk, and provider performance, reducing manual reporting requests by 40%.
- Optimized complex SQL queries and database performance across Snowflake, Oracle, and PostgreSQL, cutting report refresh time from 45 minutes to under 10 minutes.
- Designed ETL pipelines using Informatica and Apache Airflow to ingest data from EHR systems, APIs, and third-party sources with robust error handling and monitoring.
- Implemented machine learning models (scikit-learn, XGBoost) to identify high-risk patients, supporting proactive care and cost reduction initiatives.
- Managed cloud-based data infrastructure on AWS (S3, Redshift) and Azure (Data Factory) to ensure scalable and reliable data workflows.
- Collaborated with cross-functional teams in Agile/Scrum using JIRA and Confluence to deliver end-to-end analytics solutions.
- Ensured HIPAA compliance through role-based access, encryption, and audit logging, maintaining zero compliance violations.

Data Analyst | System Soft Technologies, FL, USA

July 2024 - May 2025

- Built and maintained AWS Glue ETL jobs to automate data ingestion and loading into Redshift, reducing manual effort by 80% and improving workflow efficiency.
- Improved data processing speed and accuracy by optimizing data cleansing and transformation workflows, reducing overall processing time by 40%.
- Enhanced Snowflake performance through query tuning and optimization techniques, increasing efficiency by 30%.
- Developed and delivered 30+ ad hoc reports and interactive dashboards in Power BI using advanced DAX, improving data visibility and business decision-making.
- Integrated and analyzed healthcare data from Oracle and MySQL sources to build insight-driven dashboards for performance tracking.
- Created complex KPIs and calculations using DAX and MDX across tabular and multidimensional models.
- Built QuickSight dashboards to present actionable insights to stakeholders, contributing to a 10% increase in revenue.
- Optimized SQL Server queries, stored procedures, and triggers, improving reporting efficiency by 35%.

Programmer Analyst Intern | Cognizant, India

Dec 2021 - July 2022

- During my internship, I gained hands-on experience in AWS technology, SQL, Python, and basic big data concepts. I collaborated with a team of professionals to develop and implement data solutions, leveraging the power of AWS services such as EC2, S3, Lambda, and Glue. I gained proficiency in writing complex SQL queries and utilized Python for data processing and analysis.
- Applied row-level security and role-based access controls to ensure secure and compliant data access.
- Developed automated ETL pipelines using SQL and Power Query to enable accurate, scalable, and timely reporting.

PROJECTS

● **Customer Support Ticket Analysis & Operational Insights:** Developed an interactive Tableau dashboard using SQL and Python (Pandas) to analyze customer support tickets. Cleaned and transformed raw logs, created aggregated metrics, and built dashboards highlighting ticket volume patterns, issue categories, resolution times, SLA compliance, and agent performance to enable data-driven improvements in customer experience and workflow efficiency.

● **E-Commerce User Behavior & Conversion Funnel Analysis:** Analyzed user clickstream, product view, and transaction data using Python and SQL to understand browsing behavior and conversion drop-off points. Performed segmentation, cohort analysis, and funnel breakdown, and built Power BI dashboards visualizing user journeys, engagement metrics, and conversion stages to help stakeholders optimize marketing spend and improve overall conversion rates.

● **UT Dallas- Parking & Transportation Services:** Built and managed a parking permit system by automating 80% of approvals, reducing manual labor by 80% and saving \$1,000 per month. Designed a relational database in MS Access with 7 tables and 10 forms, developing VBA macros to handle ETL processes, data cleaning, and business validations on live Outlook data. Also trained a 5-person team on the system and authored documentation covering business, functional, and technical requirements to standardize processes and drive user adoption.
