OBJECTIVE

Graduate seeking an opportunity that allows me to utilize my current skills in a professional environment that enables growth and improvement.

EDUCATION

University of Michigan – Dearborn – Dearborn, MI

Bachelor of Science in Software Engineering

Honors: Dean's List & University Honors

GPA: 3.74

Graduated: April 2023

WORK EXPERIENCE

Process Engineer - General Motors - July-October 2023

- **Fault Data Collection:** Collected and analyzed data on faults in the assembly process of EV battery modules for the Hummer EV. These reports Identified key issues in the production line, providing actionable insights to improve assembly efficiency.
- **Reporting & Process Improvement:** Compiled detailed reports for each fault, outlining causes, solutions, and duration. These reports were used by engineers to implement corrective actions by addressing root causes, contributing to a reduction in assembly line downtime and enhanced production stability.
- **Production Rate Improvement:** Contributed to improvements in the assembly line's production rate for EV battery modules with a 50%+ overall increase in production, directly boosting overall output and meeting production goals.

SKILLS

C/C++	Agile Scrum	Minitab	UML
JavaScript	Git + GitHub Unit Testing	Enterprise Architect	Software testing
CSS & HTML	Debugging	Visual Studio & VSC / Atom	Microsoft Office Suite
Data Analysis	OpenMarkov	PHP	Python
Tableau	C#	MySQL	BigML

PROJECTS

Engineering Probability and Statistics Project – April 2021

- **Data Analysis & Insight:** Leveraged publicly available databases to conduct in-depth data analysis, uncovering actionable insights and presenting compelling narratives that drove informed conclusions.
- **Advanced Analytical Tools:** Utilized Minitab, Tableau, OpenMarkov, and BigML to analyze data, project trends, identify correlations, and provide insight that answered key queries and enabled data-driven conclusions.
- **Data Visualization:** Created intuitive visualizations and graphs that improved understanding of key points and queries.

Senior Design – Translation Networks ADA (Group Project) December 2022

- **Project Goal:** Enhanced the Translation Networks website to meet WCAG accessibility standards and client-specific requirements, ensuring full ADA compliance.
- **Accessibility Features:** Enabled vision-impaired users to search, find, edit, and add records to the website and database, using screen readers like JAWS and NVDA which Increased accessibility for users with visual impairments, improving user experience and functionality.

- **Technical Implementation:** Modified the website using HTML, CSS, JavaScript, and PHP to support compatibility with assistive technologies. We were able to achieve a fully functional, accessible site for visually impaired users, validated through expert testing and feedback from a visually impaired accessibility consultant.
- **Collaboration & Client Engagement:** Actively participated in the Software Development Life Cycle (SDLC) and bi-weekly client meetings to ensure project alignment with client goals and needs. We were able to deliver a product that met or exceeded client expectations, ensuring satisfaction and a timely delivery.
- **Accountability & Presentation:** Took responsibility for individual tasks, regularly demoing progress to both the client and class. Successfully communicated project outcomes and technical aspects, contributing to team accountability and project transparency.

Web U.I. Accessibility Questionnaire Assessment Website (Group Project) – December 2021

- **Accessibility Web Application Development:** Developed a web application using React JS to help developers identify accessibility flaws in their websites, offering actionable feedback and solutions based on detailed analysis. This feedback for those who implement it leads to more accessible websites and an improved user experiences for all users.
