

Akanksha Kedia

Raleigh, NC, United States | akankshakedia@yahoo.com | 6027275136

Profile

Senior analyst with 8+ years of experience in data science and analytics across Consumer Packages Goods, Legal Compliance and Financial Services. Skilled in Python, SQL, ETL pipelines, Web scraping, Azure Data Factory, and stakeholder-facing reporting. Delivered a vendor replacement that improved data accuracy and cut turnaround time by 20% and reduced production data defects by 30%.

Professional Experience

Data Scientist II, Azimuth GRC

Nov 2023 to Jan 2026

- Led end-to-end delivery of a Python-based web scraping workflow to extract U.S. mortgage law data from multiple public sources, replacing an external vendor while improving data accuracy, reducing turnaround time by 20%, and generating cost savings.
- Defined project scope and requirements with stakeholders, then helped develop and test requirements that kept mortgage law content current for the company website and support timely legal compliance.
- Maintained scalable ETL pipelines using Python and SQL to pull, clean, validate, and integrate JSON, XML and CSV data enabling reliable change management and repeatable refreshes.
- Orchestrated ingestion and environment promotion using Azure Blob Storage and Azure Data Factory, delivering processed datasets into QA and Production with consistent checks thereby maintaining error free data flow .
- Created Python and SQL synthetic data generation frameworks to accelerate testing cycles, expand test coverage, and reduce production data defects by 30%
- Communicated results through dashboards, visualizations, and presentations to technical and non-technical stakeholders.

Data Analysis Consultant, Upwork

Jun 2022 to Nov 2023

- Defined analysis scope and built a repeatable Python workflow to extract tabular data from 300+ PDF pages using Tabula-py, then cleaned and merged outputs into a single Pandas dataset (10k+ rows, 12 variables) for downstream modeling and reporting.
- Pulled and cleaned unstructured CSV data, engineered time-based features, and delivered month-over-month and year-over-year performance tracking that accounted for seasonality and key business drivers.
- Performed exploratory data analysis and developed a predictive model in Python; documented the full training and testing approach in a clear, reproducible script to support review and iteration.
- Presented findings and model results to clients through written summaries and visual outputs, incorporating feedback to refine data preparation and analysis deliverables.
- Contributed to an MIT research study evaluating a new Python library for interactive ML visualizations on Pandas datasets, providing practical feedback on usability and effectiveness.

Assistant Manager - Financial Services Analytics, Genpact

Feb 2015 to Jul 2016

- Produced daily, monthly, and quarterly analytics reporting for a large U.S. bank's DC and PLCC rewards credit card portfolio, using SAS 9.3 and SQL to pull, clean, and validate data on applications, accounts, sales, and purchase active customers for business consumption
- Owned end-to-end delivery of recurring metric reports by translating stakeholder questions into clear reporting requirements, documenting definitions and logic for new reports and enhancements, and supporting informed decision-making
- Identified high-effort reports suitable for automation and migration to a BI platform, preparing specifications and handoffs that reduced manual effort and delivered time and cost savings
- Handled ad hoc analytical requests from business partners and provided regular updates to global retail teams, presenting results and clarifying assumptions, data limitations, and drivers behind trends
- Maintained a team quality tracker to monitor accuracy and timeliness of deliverables, flagging issues early and driving corrective actions to improve reporting reliability

Research Analyst, Course5i

Feb 2012 to Feb 2014

- Built retail analytics datasets by cleaning, wrangling, joining, and converting raw data into a usable analysis-ready format to support downstream reporting and modeling.

- Performed exploratory data analysis using visualizations, correlation analysis, distribution checks, and summary statistics to surface data quality issues and actionable patterns for the client team.
- Applied descriptive and inferential statistical techniques to answer business questions and validate findings before sharing results with senior research managers.
- Tracked and reported brand health for the client's products, translating analytical outputs into clear updates for stakeholders.
- Communicated industry trends through recurring client newsletters and written updates.

Business Analyst, Tata Consultancy Services

May 2009 to Feb 2012

- Built and maintained a standardized performance-tracking template to compare newly launched items against existing products, enabling consistent monitoring and faster insight generation for stakeholders.
- Analyzed SKU-level portfolio performance within the brand and versus competitors to identify strong and weak items and inform assortment and product strategy discussions.
- Evaluated store-promotion effectiveness by assessing incrementality by promotion type, translating findings into clear recommendations for improving promotional planning.
- Created dynamic dashboards and visualizations for recurring insights reporting, improving decision-making by making trends and drivers easier to interpret for non-technical audiences.
- Reported brand and category health using user interaction, demographic, and brand awareness inputs, synthesizing results into stakeholder-ready summaries and presentations.

Education

Indus Business Academy

Post Graduate Program in Management

Areas of Expertise

- Team Work/Collaboration
- Effective Communication
- Problem Solving
- Adaptability
- Emotional Intelligence

Technical Proficiencies

Scripting: Python, SAS
Querying: SQL
Cloud applications: Azure Data Factory, Azure Blob Storage
Web Scraping: Selenium
Data Analysis and Management: Data Visualization, Exploratory Data Analysis, MS Office- Excel, Word, Powerpoint
Machine Learning: Regression, Classification, Text Analytics, Segmentation

Professional Training

Advanced Certificate in ML and AI(Pursuing), IIT Kanpur

Certifications

SQL(Advanced) HackerRank
