EDUCATION

Southern New Hampshire University

Bachelor's, Computer Science

May 2023 - October 2024

PROFESSIONAL EXPERIENCE

Target

Bonney Lake, WA, USA

Presentation Team Member

January 2019 - Present

- Visual Merchandising: Arranged products with strategic color schemes, signage, and promotional displays to enhance store aesthetics and drive customer engagement
- Inventory Management: Monitored stock levels and implemented rotation procedures to ensure product freshness and minimize waste
- Pricing Accuracy: Conducted regular shelf audits and adjusted pricing to align with current promotions and pricing strategies
- Signage Placement: Developed and installed clear, effective signage to improve customer navigation and product identification
- Planogram Execution: Followed detailed planogram layouts to maintain consistent product placement and optimize in-store presentation
- Seasonal Displays: Adapted and refreshed displays to reflect seasonal trends and holiday themes, boosting promotional impact and sales.

PROJECTS & OUTSIDE EXPERIENCE

Housing Price/Interest Rate

- Technologies: Excel, Tableau
- Collected and cleaned 50 years of housing and interest rate data from FHFA.gov using two CSV files.
- Developed an interactive Tableau dashboard visualizing housing price changes and average interest rates by state.
- Enabled dynamic filtering to highlight states with average interest rates below 5%, providing insights into housing affordability across the U.S.
- Used data-driven storytelling to identify long-term regional trends and support decision-making for homebuyers and analysts.

Meal Research Web App

- Technologies: Python, Flask, MongoDB, HTML, JWT, BeautifulSoup
- Built a user-friendly web application using Flask that allows users to register and log in securely using JWT-based authentication.
- Implemented shopping list functionality where users can add individual items or search for recipes and add full ingredient lists.
- Used BeautifulSoup to web scrape ingredient data from online recipe websites, enabling dynamic recipe-based shopping list creation.
- Added a favorites feature, allowing users to pin specific items that persist across sessions until removed.
- Utilized MongoDB for storing user data, shopping lists, and favorite items with efficient data retrieval and updates.
- Focused on clean, maintainable code and followed best practices for beginner-level full-stack development.
