EDUCATION

University of California, Berkeley, Berkeley, CA

College of Computing, Data Science, and Society

Bachelor of Arts, Major in Statistics, Minor in Digital Humanities

08/2023 – 08/2025

SKILLS

Programming Languages: Python, SQL, R,

AI & Machine Learning: MCP, RAG, Deep Learning, Keras/Tensorflow, PyTorch, scikit-learn, NLP

Data Analysis: A/B Testing, Time Series Analysis, Data Mining, Feature Engineering, Regression Analysis

Data Visualization: Power BI, Tableau, ArcGIS Online

Database & Big Data: PostgreSQL, MS SQL Server, Oracle, MySQL, Hadoop, Spark, HiveSql

Cloud Computing: AWS, GCP, Azure

EXPERIENCE

LiveQ, LeetMock LLC – Remote

10/2025 – Present

Data Analyst Intern

- Conducted behavioral and retention analytics across **multi-feature AI interview modules** with hundreds of active users and high-frequency session data, leading **A/B tests**-driven UI improvements that increased session completion rate.
- Built **automated Python + SQL ETL pipelines** to process event logs and product usage data, enabling **real-time KPI dashboards** and reducing manual reporting workload by **40%**.
- Designed **interactive Tableau dashboards** to visualize activation funnels, conversion paths, and retention cohorts, enabling **data-driven roadmap decisions** that improved **session completion rate by 18%**.

Bank of China, Linyi Branch – Linyi, China

07/2023 – 08/2023

Data Analyst, Transaction Banking Department

- Built automated **data**-pipeline scripts using **Python** and **SQL** to process and validate international settlement transactions, improving reconciliation speed and accuracy by **25%**.
- Designed interactive dashboards in **Tableau** to visualize transaction trends, compliance metrics, and FX settlement timelines across regions.
- Applied **statistical models** to detect anomalies and discrepancies in settlement logs, **automating 70% of manual reviews** and ensuring full compliance with cross-border banking regulations.

ADDITIONAL EXPERIENCE: ACADEMIC PROJECT

Graph-RAG Enterprise Search Platform (MCP Orchestrated)

11/2024 – 05/2025

- Built **Graph-RAG pipelines** with knowledge graph + hybrid vector search, improving **grounded retrieval accuracy by 45%+**.
- Integrated **MCP** to unify knowledge access across graph DB and APIs, reducing integration complexity.
- Implemented **evaluation framework** reducing model assessment time by **50%**.

ReadAndReduceEmotions: How Algorithms Read and Reduce Emotion

05/2025 – 10/2025

- Processed and annotated **1,200 Reddit comments** from the **GoEmotions dataset**, comparing **human-labeled emotions** with **GPT-4 (zero-shot)** and **BERT (fine-tuned)** predictions to evaluate model sensitivity across **27 emotion classes**.
- Implemented an **error analysis pipeline** that reduced misclassification rate by **18%** through targeted retraining and feature selection, visualizing results via **confusion matrices and embedding clusters**.
- Applied **NLP techniques** including **topic modeling (LDA)**, **sentiment analysis**, and **keyword co-occurrence networks** to uncover hidden themes and emotional patterns.

Huntsman Corporation (HUN) Investment Analysis

05/2025 – 07/2025

- Collected and analyzed multi-year financial and market data from SEC filings, Bloomberg, and Yahoo Finance APIs using **Python (pandas, NumPy)** to evaluate Huntsman Corp.'s performance relative to peers.
- Built **quantitative valuation models** (FCFF, DDM, and P/E regression) to forecast financial metrics—**projecting 2% CAGR revenue growth and margin recovery from 1.2% → 7.2%**.
- Applied **statistical analysis** to identify correlations between macroeconomic indicators (energy price index, global demand) and Huntsman's profitability, supporting a **data-backed "Hold" recommendation**.

Water Inequality and Structural Violence in California

06/2025 – 08/2025

<https://storymaps.arcgis.com/stories/0ee5418c5d8e47a78b871265788a0fb1>

- Analyzed geospatial and demographic datasets using **Python (pandas, geopandas)** to identify regional disparities in water access across California, and developed map-based policy insights to highlight environmental inequity.
- Created **interactive visualizations** with **ArcGIS StoryMaps and Tableau**, highlighting spatial correlations between water quality, income, and community vulnerability.
