

Deepika Kolla

QA Engineer

📞 (470)-584-6066 ✉ deepika.k@mycvscout.com

Professional Summary

- Around 4 years of experience in testing web applications, automation frameworks, and databases, Skilled in developing and executing automated scripts using Selenium WebDriver, Java, Python, Swagger UI, and TestNG.
- Proficient in various software testing methodologies including unit testing, integration testing, software system testing, and regression testing, ensuring comprehensive quality assurance throughout the development lifecycle.
- Experience in industry-standard methodologies such as Software Development Life Cycle (SDLC), and Software Test Life Cycle (STLC) using Waterfall and Agile Model.
- Possesses proficiency in manual and automated testing, leveraging tools such as Selenium WebDriver, JMeter, JIRA, Cucumber, BDD, and SoapUI to ensure software quality.
- Integrating REST Assured with Jenkins to enable continuous API testing, improving API quality and reliability.
- Used Google Cloud Data Store (GCP) to store the data on a cloud platform and validated the entities, and columns that were extracted and loaded to the Data Store.

Education

Park University

Master in Information Systems in Business Analytics

August 2021 - December 2023

Missouri, USA

Sathyabama Institute of Science & Technology

Bachelor of Engineering in Computer Science

July 2016 - June 2020

Chennai, India

Work Experience

MetLife

QA Engineer

September 2023 – Current

Missouri, USA

- Successfully implemented a new defect tracking process that improved communication and collaboration between QA and development teams, leading to a 14% decrease in issue resolution time.
- Accomplished comprehensive end-to-end tests using Playwright, increasing test coverage by 50% and reducing manual testing effort.
- Wrote and executed automated tests in Typescript/Playwright for a browser-based application.
- Validated the API response with the GCP cloud data in the data store.
- Leveraged Sauce Labs to ensure cross-browser compatibility for applications, reducing testing time by 20% and preventing compatibility issues in production.
- Developed and maintained 10+ reusable test scripts covering core functionalities on Selenium Grid, enabling parallel execution, and increasing test efficiency by 25%.
- Facilitated effective collaboration with cross-functional teams through DevOps and Agile methodologies, ensuring seamless development, operations, support, and bug lifecycle coordination.
- Implemented BDD frameworks, such as Cucumber, to foster collaboration and alignment between QA and development teams, resulting in a 40% reduction in defects and improved overall product quality.
- Created SQL scripts for test data preparation and cleanup, streamlining the testing process and reducing manual effort.

Dixon Technology

QA Engineer

January 2019 – July 2021

Maharashtra, India

- Constructed scalable agile API automation frameworks using Java Rest-Assured and SoapUI with Groovy, and UI automation solutions using Selenium WebDriver for end-to-end testing of microservices.
- Maintained a clean and organized Git repository with 30% code coverage branches, facilitating efficient collaboration and code review.

Implemented CI/CD pipelines using Jenkins and Azure DevOps to integrate automated tests into the development process, accelerating feedback loops and deployment cycles

- Leveraged Atlassian tools (JIRA, Confluence) to streamline project management and foster collaboration, resulting in a 25% reduction in communication overhead.
- Integrated Jenkins with various testing tools (Selenium, Cucumber) to create a comprehensive CI/CD pipeline, improving software delivery efficiency by 25%.
- Leveraged Groovy's dynamic features to create flexible and maintainable test scripts, improving test coverage by 20%.
- Maintained and updated Selenium test scripts to reflect application changes, ensuring test cases remained effective.
- Utilized testing methodologies like smoke testing, GUI software testing, backend testing, black-box testing, white-box testing, functional testing, integration testing, system testing, regression testing, and security testing.
- Built SQL queries to extract and analyze test data, enabling data-driven testing and improving test coverage by 50%.

Skills

Methodologies: SDLC, STLC, Agile/Scrum, Waterfall.

Testing Tools: Selenium, Postman, JMeter, REST Assured, Swagger, JIRA, SOAP UI, Playwright, Sauce labs.

Languages/Frameworks: TestNG, Cucumber, POM, Junit, Java, JavaScript, SQL, Python, Groovy.

Manual Testing: API Testing, GUI Testing, Black Box Testing, Unit Testing, Integration Testing, UAT Testing.

Databases: Oracle SQL, MySQL, MS SQL Server, MongoDB.

Version Control & Infrastructure Tools: GIT, Maven, Jenkins, Docker, Google Cloud,

Operating Systems: Windows, MacOS, Linux.

Certifications

Certified Tester Test Automation Engineer (CT-TAE)
