Professional Summary

Data & Analytics professional with experience building SQL and Python data pipelines, developing Power BI dashboards, and automating reporting workflows for operational and financial decision-making. Experienced translating business requirements into scalable analytics solutions while collaborating with cross-functional stakeholders. Passionate about data engineering, business intelligence, and AI-driven analytics in client-focused environments.

Education

Rochester Institute of Technology, Rochester

Master of Science in Data Science, GPA: 4/4 May 2026

University of Pune, Pune

Bachelor of Science in Statistics and Mathematics, GPA: 3.81/4 Sept 2022

Technical & Data Governance Skills

Programming & Querying: Python (Pandas, NumPy), SQL, R, Java, C/C++.

Data Analysis & Visualization: Power BI (DAX, Power Query), Tableau, Excel (Advanced), Matplotlib, Seaborn, Plotly, EDA, Data Mining, Statistical Analysis, Feature Engineering.

Databases & Big Data: MySQL, MS Access, MongoDB, Data Modeling, Data Cleaning & Transformation.

Machine Learning & NLP: Scikit-learn, XGBoost, Random Forest, Clustering, PCA, TensorFlow, PyTorch, BERT/FinBERT, OCR.

Data Engineering & Governance: ETL Workflows, Data Warehousing, Data Stewardship, Metadata Documentation, KPI Standardization, Dashboard Governance.

Tools & Platforms: Jupyter Notebook, VS Code, PyCharm, JMP Pro, SAS, RStudio, Git/GitHub, Google Colab, Minitab, AWS.

Work Experience

Data & Reporting Analyst May 2025 – May 2026

Rochester Institute of Technology | Rochester, NY

- Performed data mining and analysis on 50K+ transaction records using SQL, Python, and MS Access, integrating data from 3+ systems to support financial reporting and reduce manual data retrieval effort by ~40%.
- Developed and maintained 5+ Power BI dashboards using DAX and Power Query, tracking KPIs such as revenue variance and billing accuracy, enabling real-time visibility for 5+ stakeholders and reducing reporting turnaround time by ~30%.
- Designed automated ETL workflows using SQL, Python, and Excel to extract, validate, transform, and reconcile over 1,000 records per reporting cycle, improving data quality and reducing manual effort by 25%.
- Implemented data validation and quality control processes, identifying anomalies and inconsistencies across datasets, reducing audit effort by ~30% and improving overall data reliability.
- Conducted deep-dive transaction analysis, identifying pricing discrepancies and uncovering approximately \$6K in revenue leakage, driving corrective actions to improve billing accuracy and prevent recurring errors.
- Delivered weekly and monthly reports analyzing revenue trends and billing discrepancies, enabling data-driven decisions to improve operational efficiency.
- Collaborated with Finance, IT, and Operations teams to define KPIs and reporting requirements, enabling development of scalable dashboards aligned with business needs.

Business Intelligence Analyst Jan 2025 – May 2025

Rochester Institute of Technology | Rochester, NY

- Conducted exploratory data analysis (EDA) on student dining and billing datasets using Python (Pandas, NumPy), uncovering trends and behavioral patterns that informed operational decisions.
- Designed and deployed Tableau dashboards to visualize key metrics, improving stakeholder visibility and reducing manual reporting effort.
- Applied statistical techniques in Minitab to evaluate drivers of anomalies and support data-backed process improvements.
- Built reusable data processing workflows to streamline analysis and ensure consistency across reporting processes.
- Standardized and transformed raw datasets through data wrangling, feature creation, and normalization, enabling more structured and consistent downstream analysis.

Course Assistant – Python Programming Aug 2024 – Dec 2024

Rochester Institute of Technology | Rochester, NY

- Mentored 30+ students in Python programming, strengthening foundations in analytical thinking, data structures, and problem-solving relevant to data analysis workflows.
- Guided students in debugging, algorithm design, and code optimization, improving code efficiency and reinforcing best practices for writing scalable and reliable programs.
- Evaluated and provided structured feedback on 50+ assignments, emphasizing code quality, logical reasoning, and documentation, improving overall coding standards and student performance.
