## SUMMARY

Data Analyst with 3+ years of experience transforming large-scale datasets into operational decisions using SQL, Python, and BI tools. Built data pipelines, analytics dashboards, and predictive models across pharmaceutical supply chain, retail, and nonprofit domains — delivering ~\$240K in operational impact and improving customer lifetime value by 23%.

## EXPERIENCE

### Data Analyst | Giving Forward, New York

Aug 2025 - present

- Analyzed financial metrics across **110K+ nonprofit filings** and built dashboards segmenting organizations by sector and financial health, enabling marketing leadership to prioritize outreach across **56K+ nonprofits** with verified websites.
- Built **Python**-based enrichment workflows integrating IRS Business Master data, ProPublica APIs, and web-scraped registries, achieving **63%** NTEE sector classification coverage across the 110K+ nonprofit registry.
- Engineered a **PostgreSQL** database ingesting 110K+ IRS Form 990 XML filings, serving as the live data backbone powering Giving Forward's public-facing nonprofit registry website.

### Business Intelligence Analyst | Pixel E Solutions, Mumbai

Jan 2023 - Aug 2023

- Automated **Alteryx ETL** workflows to ingest, clean, and transform **Google Analytics** web traffic and conversion data into BI-ready reporting tables, reducing manual reporting effort by 75%.
- Developed customer segmentation for **12K+** retail and ecommerce customers using **RFM** analysis and clustering, enabling targeted marketing campaigns and supporting decisions that increased **customer lifetime value** by **23%**.
- Designed 5+ **Tableau** dashboards integrating **A/B test** results and marketing KPIs, visualizing performance across **3 sales regions** to improve stakeholder visibility and ROI-driven decisions.
- Partnered with product managers and marketers in **Agile** sprints to translate business questions into scalable BI datasets, dashboards, and reporting solutions.

### Data Analyst Intern | Neon Laboratories (Pharmaceutical Manufacturer), Mumbai

Jan 2022 - Dec 2022

- Investigated inventory imbalance across a **2,500-SKU portfolio** using **SQL** to analyze **1M+ sales records**, identifying **140+ slow-moving SKUs** and driving stock reallocation that reduced excess inventory **12%**, freeing **~\$180K in carrying costs**.
- Analyzed regional demand patterns across markets representing 80% of portfolio revenue using **SQL** and **Excel** trend models, uncovering allocation mismatches, **reducing overstock 9%** & improving forecast alignment across two distribution regions.
- Built **Power BI dashboards** analyzing supplier lead times and delivery reliability across **20+ vendors**, presenting SLA gaps to procurement team that led to replacement of two **underperforming suppliers**, improving reliability from **78% to 93%**.
- Automated **ERP** inventory, procurement, and sales reporting using **SQL workflows**, enabling operations, procurement, and finance teams to streamline supplier contract negotiations and saving **~\$60K annually**.

## EDUCATION

### Master of Science in Data Analytics Engineering

Northeastern University, GPA : 3.75/4.0

May 2025

Boston, MA

### Bachelor of Technology in Electronics Engineering

University Of Mumbai, GPA : 7.4/10.0

May 2022

Mumbai, MH

## SKILLS

- Data & BI:** SQL, Python (pandas, NumPy), Power BI (DAX), Tableau, Looker Studio
- Data Engineering & Databases:** PostgreSQL, MySQL, BigQuery, MongoDB, data modeling, query optimization
- Techniques:** EDA, predictive modeling, customer segmentation, demand forecasting, cohort analysis, A/B testing analysis, regression analysis, statistical modeling
- Tools & Platforms:** Excel, Power Query, Power Automate, Google Analytics, Salesforce, JIRA, Git, SAP, Alteryx
- Certification:** McKinsey.org Forward Program, Supply Chain Foundations: Analytics, ML (Duke University)

## PROJECTS

### Predictive Workforce Insights

- Built a **Random Forest** attrition prediction model on 15K+ employee records in **BigQuery**, using **PyCaret** to evaluate 10+ classification algorithms, achieving ~84% accuracy and 0.87 AUC to support workforce risk forecasting.
- Identified key attrition drivers (tenure, compensation, manager rating) through feature importance analysis and visualized high-risk employee segments in **Looker Studio** dashboards to simulate targeted retention strategies.

### Comedy Connect DBMS

- Designed a **MySQL** data warehouse by translating **EER** and **UML** models into a normalized schema, enabling SQL analytics and **Tableau** dashboards to evaluate order trends, customer behavior, and product/event KPIs.
- Compared relational **SQL** queries with **MongoDB** aggregations across analytics workloads, finding SQL delivered faster aggregation performance for reporting queries, informing database selection for BI-focused applications.
