SUMMARY

Software Engineer with a master's in computer science from Georgia State University and hands-on experience in backend development, full-stack applications, and AI-driven systems. Proficient in Python, Java, SQL, and cloud technologies (AWS). Built scalable applications including an AI-powered interview trainer at IBM and a full-stack professor rating platform. Seeking entry-level Software Engineer or Data Analyst roles.

TECHNICAL SKILLS

Languages: Python, Java, C, SQL, JavaScript, HTML, CSS

Frameworks: React, Node.js, FastAPI

Databases: MySQL, PostgreSQL, MongoDB, Snowflake

Cloud & Tools: AWS (S3, EC2, Lambda), Azure, Git, Kubernetes

Data Tools: Power BI, Tableau, Microsoft Excel(Advanced), Schema Design

WORK EXPERIENCE

Graduate Assistant – Software Engineering (Georgia State University) Jan 2025 – Dec 2025

- Built Rate My Professor, a full-stack platform with FastAPI, React, and JWT authentication scoped to university email domains.
- Reviewed student pull requests and explained branching strategies; used the same collaborative Git workflow managing version control and code reviews for Rate My Professor's frontend and backend codebases.
- Built Rate My Professor's search and filter system (department, rating, difficulty) and an admin dashboard with CSV bulk imports, review moderation, and a content flagging workflow.
- Co-designed grading rubrics evaluating API architecture and Agile delivery; applied that same lens to Rate My Professor's end-to-end deployment setup, optimizing for performance as data volume scaled through testing.

AI Research Intern – IBM May 2025 – Aug 2025

- Built an AI-powered Interview Trainer Agent from the ground up using IBM Granite LLMs and a RAG pipeline - the tool helped users practice interviews and get personalized feedback in real time, improving interview readiness scores by 30% in testing.
- Developed REST APIs using FastAPI and connected them to Watsonx.ai to serve model responses with sub-second latency, making the experience feel genuinely conversational rather than sluggish.
- Spent a significant chunk of the internship experimenting with prompt engineering - tweaking how questions were framed, how context was retrieved, and how feedback was structured - which ended up improving response relevance by 25%.
- Collaborated with the research team to define evaluation metrics for model outputs and iterated on the pipeline based on those findings throughout the summer.
- Documented the architecture, API contracts, and deployment setup so the project could be handed off at the end of the internship.

Graduate Assistant – Software Engineering (Georgia State University) Jan 2024 – Dec 2024

- Worked alongside faculty to support software engineering courses for 60+ students each semester - this included running lab sessions, grading projects, and reviewing Agile sprint deliverables to give students timely feedback.
- Held regular office hours and one-on-one sessions to help students work through tricky concepts like object-oriented design, REST API structure, and debugging in full-stack projects.
- Helped students get comfortable using GitHub for collaborative development - reviewing pull requests, explaining branching strategies, and walking through code review best practices.
- Assisted the professor in designing grading rubrics that were clear and consistent, which reduced grading disputes and helped set better expectations for students upfront.
- Occasionally stepped in to lead class discussions or demo sessions when the professor was unavailable, which pushed me to explain technical concepts clearly and confidently.

Software Intern - KPIT Technologies May 2023 – Nov 2023

- Joined a backend team and took ownership of building and integrating RESTful APIs and microservices - the work we shipped reduced feature delivery timelines by about 20% by decoupling previously tangled services.
- Dug into recurring defects in the codebase that were costing the team debugging time each sprint; after identifying the root causes and cleaning up the logic, we cut those recurring issues by 15%.
- Set up and maintained CI/CD pipelines using Git and Jenkins, which helped the team ship weekly releases more reliably without as many last-minute integration headaches.
- Participated in daily standups, sprint planning, and retrospectives - got real exposure to how a professional engineering team operates and what it takes to ship software consistently.

PROJECTS

Srilekha Hospital Website | Freelance Project

[LINK](#)

- Took on a freelance engagement to design and build a website for Srilekha Hospital - this was my first real client project, and it taught me a lot about translating vague requirements into a working product.
- Built the entire site using HTML, CSS, and JavaScript, focusing on clean structure, fast load times, and a layout that worked well on both desktop and mobile without relying on heavy frameworks.
- Covered all the key sections the hospital needed: services offered, department listings, doctor profiles, and a contact and appointment inquiry form - organized so that patients could find what they needed quickly.
- Met with the client multiple times to walk through drafts, incorporate feedback, and make sure the tone and visuals matched what they had in mind for a medical practice - delivered on time with no major revisions after handoff.

EDUCATION

Georgia State University

Jan 2024 – Dec 2025

Master of Science in Computer Science — GPA: 3.76 / 4.3

R.M.D Engineering College

Aug 2019 – Apr 2023

Bachelor's in computer science – GPA: 9.03/10

ACHIEVEMENTS & CERTIFICATIONS

- **AWS Certified Cloud Practitioner** — Amazon Web Services
- Served as Program Chair for the IEEE Student Chapter at Georgia State University, organizing technical talks, workshops, and student networking events throughout the year.
- Won first place at a competitive showcase for the design and development of a Fashion-Tech Web Solution, recognized for both technical implementation and user experience.
