

VENKATA AKHIL VAKADA

Data Analyst

+1 (203) 887-4295 | vvakhil8031@gmail.com | linkedin.com/in/venkata-vakada

PROFESSIONAL SUMMARY

Results-driven Data Analyst with 3+ years of experience transforming complex datasets into actionable business insights across healthcare and telecom domains. Proficient in SQL (T-SQL, stored procedures, views), ETL pipeline development, data modeling, and cloud-based analytics on Microsoft Azure. Experienced in building interactive dashboards and reports using Power BI and real-time visualization tools. Skilled in Python scripting for data wrangling, and in deploying automated data workflows through Azure DevOps and CI/CD pipelines. Holds an MS in Information Technology and demonstrates a strong foundation in statistical analysis, data governance, and Agile delivery.

TECHNICAL SKILLS

Data Analysis	SQL (T-SQL), Python (Pandas, NumPy), Excel (PivotTables, VLOOKUP, Power Query), Statistical Analysis
Databases	MS SQL Server, PostgreSQL, MySQL, Azure SQL, Stored Procedures, Views, Triggers, SSIS
BI & Visualization	Power BI, SSRS, Tableau (basics), SignalR Real-Time Dashboards, Swagger/OpenAPI
ETL & Data Pipelines	SSIS, C# ETL Modules, CSV/Parquet/Text Ingestion, Bulk Insert, Azure Data Factory concepts
Cloud & DevOps	Microsoft Azure (Blob Storage, Azure SQL, Service Bus, Functions), Azure DevOps, GitHub Actions, Docker
Data Modeling	Relational Schema Design, EF Core Code-First, Normalization, DDD, Repository Pattern
Programming	Python, C#, LINQ, JavaScript, TypeScript, HTML5, CSS3
Quality & Tools	SonarQube, xUnit, Postman, Jira, Confluence, Git, Visual Studio, VS Code
Methodologies	Agile/Scrum, TDD, Data Governance, Code Reviews

EDUCATION

Master of Science in Information Technology Franklin University, Columbus, OH	GPA: 3.77 / 4.0 June 2025
Bachelor of Technology in Electronics & Communication Engineering JNTU Hyderabad, India	GPA: 3.31 / 4.0 June 2022

PROFESSIONAL EXPERIENCE

Data Analyst Concentrix — Client: Evernorth (Healthcare) - Analyzed millions of healthcare records daily using T-SQL (stored procedures, views, triggers) to surface trends, outliers, and KPIs for clinical and operational stakeholders. - Engineered ETL pipelines in Python and C# to ingest, validate, and transform data from CSV, Text, and Parquet sources into SQL Server via optimized bulk-insert operations, reducing load time by 40%. - Designed and maintained interactive reporting dashboards using SignalR and SSRS, delivering real-time data visibility to business users and enabling data-driven decision-making. - Integrated Azure Blob Storage and Azure Service Bus to build async data workflows between microservices, replacing synchronous batch jobs and reducing inter-service latency by 90%. - Created complex SQL aggregation queries, parameterized stored procedures, and automated report generation pipelines to support downstream analytics and compliance reporting. - Performed data quality validation and root-cause analysis on discrepancies; collaborated with healthcare SMEs to define data definitions, business rules, and KPI benchmarks.	June 2022 – Present
--	---------------------

- Implemented CI/CD pipelines via Azure DevOps for automated deployment of analytics applications across DEV, SIT, UAT, and PROD environments, reducing release cycle time.
- Collaborated in Agile/Scrum teams of 8–10; facilitated sprint planning and delivered analytical features on schedule, communicating findings clearly to non-technical audiences.

Junior Data Analyst | Net Vision Technologies — Client: T-Mobile

March 2021 – June 2022

- Queried and analyzed telecom operational datasets using SQL (MySQL, PostgreSQL) and Python/Pandas to identify usage patterns, service anomalies, and churn indicators.
- Built and consumed RESTful data APIs for telecom reporting; implemented role-based data access controls (RBAC) ensuring secure and compliant data distribution.
- Developed structured logging and monitoring dashboards (Serilog + Application Insights) to track data pipeline health, reduce MTTR, and proactively flag data quality issues.
- Refactored legacy reporting modules, migrating batch data processes to modern ETL workflows, improving maintainability and cutting report generation time significantly.
- Performed static data quality checks using SonarQube-inspired governance standards; resolved data duplication, schema drift, and integrity violations across production datasets.

KEY PROJECTS

Customer Analytics Dashboard — SQL Server / Azure / Power BI / SignalR

- Designed and built a full-stack analytics portal featuring real-time KPI dashboards using SignalR, SQL Server backend, and Bootstrap frontend; enabled business users to monitor customer metrics live.
- Developed a RESTful API layer to expose aggregated analytics data, with Swagger/OpenAPI documentation; deployed to Azure App Service via Azure DevOps CI/CD pipeline.
- Designed relational database schema with EF Core Code-First migrations; authored parameterized stored procedures for reporting and eliminated SQL injection risks across all data endpoints.

IoT Telemetry Data Pipeline — .NET / Azure Service Bus / Azure SQL

- Built a data ingestion microservice for IoT telemetry, processing async event streams via Azure Service Bus queues into Azure SQL; implemented AES-256 encryption and structured audit logging for compliance.
- Containerized the pipeline using Docker and deployed to Azure Container Instances; automated build/deploy via GitHub Actions and achieved 85% test coverage on data transformation logic.
- Produced operational analytics reports from telemetry data, enabling engineering teams to track device health trends and reduce incident response time.

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900) — Microsoft
- Generative AI Certified Professional — Oracle
- AWS Certified Cloud Practitioner — Amazon Web Services
- IT for Security — Franklin University
- Python Programming — Mindcluster
- HTML and CSS — Udemy
