

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience developing and maintaining backend services using Java and Spring Boot. Proficient in architecting robust REST APIs, applying functional programming principles, writing clean and testable production-ready code. Skilled in understanding technical requirements and translating them into scalable backend solutions, while leveraging data-driven approaches for performance optimization, providing production support and contributing to distributed systems in agile, fast-paced environments.

SKILLS

- **Languages & Frameworks:** Java, Python, Spring Boot, REST APIs, Microservices Architecture, Data Structures, Algorithms, Object-oriented Programming
- **Databases & Streaming:** Elasticsearch, Cassandra, PostgreSQL, Hibernate, MySQL, Kafka, Redis
- **Monitoring & Testing:** Grafana, Splunk, Kibana, Mockito, JUnit, SonarQube, JMeter, Postman, Swagger
- **DevOps & Tools:** Docker, Kubernetes, Ansible, GitHub, JIRA, Drools, Confluence, Maven, Jenkins, Agile Development

EXPERIENCE

Cisco

Nov 2024 - Present

Software Engineer II

- Led end-to-end development of Drools-based rule engine workflows to proactively validate user actions post-quote, reducing 100K–200K recurring errors per type per quarter. This automation eliminated manual intervention, accelerated quote processing by 30%, and significantly improved user satisfaction across global sales workflows.
- Developed comprehensive unit tests using JUnit and Mockito, ensuring production-ready code with near-zero code smells through adherence to SonarQube quality standards and best engineering practices.
- Designed, implemented, and maintained CI/CD pipelines using Jenkins, reducing production deployment errors by 30% and enabling seamless, automated releases across multiple environments.
- Mentored and upskilled 5 junior engineers into independent leads, boosting team delivery capacity and long-term velocity.
- Authored over 20 technical design documents detailing microservices, APIs, and system components, improving cross-functional collaboration and accelerating new engineer onboarding process.
- Maintained high system availability by providing 24/7 production support, rapidly diagnosing and resolving critical issues to minimize downtime and ensure robust operational performance.
- Contributed to system design discussions by proposing targeted solutions and presenting design ideas to a diverse team of over 20 members, effectively gathering and integrating feedback to enhance system functionality.
- Delivered live end-to-end feature demos to a global audience of 120+ stakeholders, including VPs, senior engineers, and international teams, enhancing product visibility and feedback loops across engineering and product.

Cisco

Aug 2022 - Oct 2024

Software Engineer I

- Developed backend microservices using Java, Spring Boot, and Elasticsearch to power key E-Commerce features such as product search and subscription renewals, collaborating closely with cross-functional teams to deliver business value and improve user engagement.
- Optimized Elasticsearch queries to reduce latency by 15% under peak load, directly improving frontend load times and delivering noticeably smoother user experience across high-traffic search and renewal interfaces.
- Boosted testing reliability by creating extensive JUnit test cases that increased code coverage from 40% to 90% and reduced defect rates across more than 5 microservices.
- Conducted rigorous load testing with JMeter by simulating over 10,000 requests per minute on REST APIs to validate performance and ensure system robustness under peak-traffic scenarios.
- Led a key platform upgrade by migrating 4 critical microservices to the latest Java and Spring Boot versions, significantly enhancing system stability and maintainability.
- Optimized system performance by analyzing logs and metrics from Splunk and Grafana, diagnosing slow-performing endpoints, troubleshooting operational issues, and refining APIs to lower response times.

EDUCATION

National Institute of Engineering

Aug 2018 - Oct 2022

Bachelor of Engineering, Computer Science

- **GPA:** 3.61/4
