

Emiz Rachel Intriago Quevedo

Brentwood, NY | 631-524-6448 | imeiz.w@gmail.com | <https://www.linkedin.com/in/emiz-intriago>

SUMMARY

3+ years of experience in IT support, telecommunications, and customer service industries. Experienced in troubleshooting technical issues, collaborating with cross-functional teams, and ensuring software and systems function reliably. Passionate about applying automation testing, quality assurance best practices, and problem-solving skills to deliver high-quality software solutions.

EDUCATION

SUNY College at Old Westbury, Old Westbury, NY

Bachelor of Science in Computer Information Systems (B.S)

Graduation: December 2022

WORK EXPERIENCE

Fusion Networks, Port Jefferson, NY

Support Technician

September 2023- Present

- Owned the PHP-based process along with 3 Support Team members for 300+ clients across 4 industries, including academia, healthcare, manufacturing, and legal, in order to eliminate human error and eliminate unwanted processes, resulting in better response time for the client
- Creating Interactive Voice Recordings (IVRs) for 240+ clients to process inbound customer calls, in order to set and modify several options during the call flow, ensuring each call is directed and routed to the correct department, reducing wait times by an average of 2 minutes for smaller and 10 minutes for larger-scale corporations.
- Developing and updating 20+ SOPs (Standard of Procedures) and 50+ Procedures for 5 client services, including Internet Servers, Carrier Drops, Traffic, Voice, and Fax Machines, in order to equip the Support Team with technical troubleshooting steps, escalation strategies, and cross-departmental call transfers, enabling the Engineering, Voice, and Management teams to receive consistent support implementation and reducing repetitive requests.
- Managing email alert notifications for 500+ clients across 2000+ locations during server outages, by generating a ticket for internal and external visibility, while creating a comprehensive ticket to inform which potential areas are affected (Primary, Backup, or the Server Equipment), thus determining and resolving potential power outages, fiber cuts, or internal upstream carrier issues.
- Diagnosing and troubleshooting Voice and Internet, including Voice Over IP (VOIP) phones or Packet loss by logging into the router to check traffic passing through, conduct ping tests, and check call flows, resolving 95% of customer calls in under 4 hours to comply with the company's Service Level Agreement (SLA), achieving a 15% increase in customer satisfaction scores.

Town of Islip, Islip, NY

Recreational Aide

June 2021- Present

- Opened and prepared the recreation center for rentals by reviewing the contract, unlocking/locking the necessary rooms, and setting up tables/chairs, resulting in accurate event readiness and renter satisfaction.
- Monitored over 20+ events to enforce the center rules and prevent any violations such as alcohol/ drug use, property damage, or unauthorized access, resulting in a safe and well-maintained environment.
- Reminded renters of the allotted rental time to prevent any overtime charges, resulting in reduced disputes by 15% and increased efficiency event turnover.
- Documented incidents and reported to management while escalating serious cases to security, resulting in accurate records and effective conflict resolution.

PROJECTS

Dynamic Construction Website, Independent Project, Brentwood, NY

September 2024 - Present

- Developed a responsive construction website using Flask, Python, React.js, creating frontend components with state management and backend routes in order to allow clients to submit estimate requests, view services, and browse testimonials, expecting to improve usability and client engagement.

- Built REST API endpoints with Flask to manage CRUD (Create, Read, Update, and Delete) operations, estimate submissions, service listings, and client dashboards in order to enable frontend and backend communications, expecting a maintainable and scalable backend for future expansion.
- Implemented automated email notifications for estimate submissions using Python's SMTP libraries and templating logic in order to streamline client estimate requests, expecting faster response times and improved customer satisfaction.
- Designed React components for a dynamic testimonial and service showcase module in order to provide prospective clients with completed work and available services, expecting increased engagement and informed client decisions
- Initiated development of a before-and-after photo management system with cropping and templating features in order to highlight completed projects, expecting to enhance visual presentation and portfolio functionality

Dynamic School Registration (System Designs and Implementation), Old Westbury

September 2022 - December 2022

- Collaborated with 2 classmates and the professor in order to develop a full-stack website by dividing responsibilities across backend, frontend, and data management, resulting in better communication and successful project delivery.
- Built backend APIs using Python Flask in order to retrieve and serve SQL data, such as user logins, and deliver secure, role-based access for multiple types (admin, Professor, student, and advisor), resulting in improved authentication and data integrity
- Coordinated with the Frontend developer to optimize API requests and integrate the Python Flask backend with the React.js frontend, resulting in providing proper data flow and integration with the user interface.
- Managed version control and collaboration using Git and GitHub, by coordinating commits and merges in order to streamline development and maintain code integrity across team members
- Tested the full-stack application across all user roles to ensure correct authentication, accurate data retrieval via APIs, secure password handling, and proper frontend-backend integration, resulting in a fully functional and reliable deployment

SKILLS

- **Programming & Scripting:** Python (Flask, Rest API), PHP, Java, JavaScript, HTML/CSS, SQL
- **Testing Tools:** Postman (API Testing)
- **IT Support:** Zammad (Ticketing System), TeamViewer, Zabbix
- **Version Control & Documentation:** Git/GitHub, SOP Development
- **Operating System:** Windows, Linux
- **Telecommunications & VoIP:** VoIP Systems (provisioning, diagnostics, API integration), SIP, Hosted PBX, Bicom, Polycom, Yealink, Cisco phones
- **Collaboration & Productivity:** Slack, Microsoft Office (Excel, PowerPoint), Google Workspace
- **Hands-on Skills:** Restoring or repairing small electronic devices, wire management
- **Retail:** Customer Service, POS System
- **Languages:** English (Fluent), Spanish (Fluent)
