SUMMARY

Software Engineer with **2+years** of experience in designing and developing full-stack applications, cloud-native systems, microservices. Proficient in modern web technologies, databases, and DevOps tools to build scalable, high-performance solutions. Strong background in building CI/CD pipelines and following Agile practices to deliver reliable and impactful software. Willing to relocate.

EDUCATION

Master of Science in Computer Science, Northeastern University, Boston, MA

Dec 2025

TECHNICAL SKILLS

- **Programming Languages:** Python, JavaScript | **Databases:** MySQL, MongoDB, NoSQL, DynamoDB
- **Frontend:** React.js, Typescript, HTML5, CSS3, Redux, SASS, Webpack, PWA, Junit
- **Backend:** Node.js, Spring Boot, Microservices, REST API, GraphQL, Elasticsearch, RabbitMQ, Kibana, Redis, gRPC, ETL
- **Cloud and DevOps:** AWS, GCP, Terraform, Packer, Linux, GitHub Actions, Docker, Kubernetes, Jenkins, CI/CD

PROFESSIONAL EXPERIENCE

Software Engineering Intern, IpserLab LLC, California

Jan 2025 – May 2025

Technologies: MERN stack (MongoDB, Express.js, React, Node.js), Postman, REST APIs

- Built a scalable quiz platform using the MERN stack (MongoDB, Express, React, Nodejs), supporting 10,000+ users with 80% engagement, and integrated real-time features with MongoDB (leaderboards, analytics) to boost customer retention by 25%.
- Improved UI usability by 35% through user experience testing, documenting pain points, and recommending enhancements that informed key product improvements.
- Automated API validation for 35+ RESTful endpoints with Postman and REST, ensuring optimized middleware and robust error handling in Express.js services.

Full Stack Engineering Intern, Sports Excitement, New York | [Link](#)

Dec 2024 – Apr 2025

Technologies: React.js, Next.js, TypeScript, Tailwind CSS, FastAPI (Python), Firebase, Cloudflare APIs, pytest, Taiga, GitHub

- Built a sports event web platform using React, Next.js, TypeScript, and Tailwind CSS for the frontend, with FastAPI (Python) and Firebase for backend services such as authentication and data handling.
- Integrated Cloudflare APIs via Python scripts to optimize CDN performance and enhance application security.
- Wrote unit and integration tests with pytest to maintain data consistency and reduce regression bugs, while collaborating in an Agile environment (Taiga, GitHub) for sprint planning, task tracking, and version control.

Software Engineer, JPMorgan Chase & Co, India

Jul 2021 – Jul 2023

Technologies: Python (Flask), React.js, JavaScript, Kafka, Oracle DB, Elasticsearch, Grafana, ELK Stack, Splunk, SMTP, pytest, CI/CD

- Led end-to-end development of fitness and wellness tracking applications, collaborating with product owners to deliver high-quality, scalable solutions.
- Engineered full-stack development of the Connect CRM app, scaling usage to 9,000 advisors across 83 countries, using Python (Flask) backend and React.js frontend.
- Developed 60+ agile features with Flask APIs and React components, monitored app health, and collaborated with advisors to resolve user issues.
- Designed a high-impact email utility using Python SMTP library and Kafka, sending ~80 targeted emails daily across 4 regions, supporting \$500M in Alternatives investments.
- Architected an orchestrator microservice to process 5M+ weekly records (ETL), analyze client investment patterns, and send personalized emails, boosting client outreach by 15% and contributing to \$700M in potential investments.
- Redesigned the Client Type Conversion utility and built a chart-based summary dashboard, improving advisor workflow and user satisfaction by 40% while tracking client investment history 50% more effectively.
- Implemented CI/CD, automated testing (pytest), and monitoring with Grafana, ELK, and Splunk to ensure robust, secure, and scalable applications.

PROJECTS

Cloud-Native Service Health Monitoring Platform | AWS, GCP, Terraform, Packer, GitHub Actions

- Provisioned a production-ready Node.js application on AWS EC2, automating multi-environment setup using Packer-built AMIs, Terraform modules, and storing data in S3 and RDS.
- Configured Auto Scaling Groups (3–5 EC2 instances) with Launch Template instance refreshes to ensure zero-downtime deployments, integrating health checks, ACM/SSL certificates, Route 53, KMS, and GitHub Secrets for secure and highly available infrastructure.

DevConnect - Developer networking platform | Express.js, MongoDB, Redux, Tailwind CSS, Socket.IO, AWS

- Engineered a MERN stack developer networking platform using MongoDB with optimized indexes, ExpressJS, REST APIs, React with Redux Toolkit for state management, and secure JWT authentication, deployed on AWS with NGINX reverse proxy.
- Built a Tinder-inspired developer matching system with MongoDB for connection states, real-time Socket.IO notifications, automated AWS SES email alerts via Node Cron, and an interactive UI with swipe-based matching and connection management.
- Implemented a real-time chat system using Socket.IO WebSockets with MongoDB persistence, secure room generation via crypto hashing, and a responsive React UI using Tailwind, DaisyUI, featuring instant message delivery and connection state validation.
