EDUCATION

Worcester Polytechnic Institute, Worcester, MA, Bachelors of Science in Biomedical Engineering May 2023

EXPERIENCE

Medical Assistant, Atrius Health, Plymouth, MA

Jan 2025-Present

- Uses the Epic System to correspond with patients and doctors.
- Uses the Epic System to review and prepare the schedules of providers.

Technical Solutions Engineer, Epic, Verona, WI

July 2023-June 2024

- Developed the software further and worked with the laboratory section of hospitals to enhance the user experience of Epic.
- Troubleshooted functionality issues using technical expertise and coordinated meetings to resolve them.
- Collaborated with teams of varying areas of expertise to determine and install solutions to issues that appear in the software within hospitals.

Intern, WPI Virtual Internship in Biomedical Engineering, Worcester, MA

May 2021-Aug 2021

- Prototyped an app in a collaborative team that could be used to benefit countries in need of medical professionals by helping a potential patient choose whether or not to seek medical attention.

Manager, YMCA, Hanover, MA

Sept 2017-Jan 2023

- Took charge in case of medical emergencies and managed my team to ensure that protocol was followed.

SKILLS

Technical Skills: Distillation, Column Chromatography, Gel Electrophoresis, Spectrophotometry, Tensile Testing, Micropipetting, Cell Culturing, Cell Freezing, Scientific Writing

Software: MatLab, Arduino, Eclipse, Microsoft Excel, Outlook, Microsoft Word, ImageJ, Bluehill Universal, LabVIEW, M-Code, JavaScript

PROJECTS

Development of a Ligament Regeneration System

Sept 2022-May 2023

- Collaborated in a team of Biomedical Engineering Students and an Orthopedic Surgeon to design an implantable device to accelerate the healing of Ulnar Collateral Ligament injuries.
- Prototyped various designs and materials to compare them to each other and ensure that the best possible design was chosen.
- Prototyped and tested the finalized design to ensure that the design was a viable option for healing.

Utilizing Robots to Support the Healthy Memory Aging Club

Jan 2022-May 2022

- Researched different literature on medical assistance robots and worked with the creator of an Armenian service robot to submit a list of recommendations for improving that robot.
- Surveyed patients and interviewed experts in various fields relating to robotics or Alzheimer's to learn what recommendations would be best to give.

Determining Best Growth Conditions for Cell Culturing

Jan 2022-Mar 2022

- Worked in a team to experiment with different growth mediums and adhesives to determine the ideal environment for cellular growth using 3T3 cells.
- Grew cells in the aforementioned ideal situation and compared those results to cell growth in a cell plate.

Designing and Prototyping an Improved Tourniquet Design

Jan 2022-Mar 2022

- Worked in a team to research, design, and prototype an improved tourniquet design. This design took the major faults of many other tourniquets and corrected the majority of those flaws.

Formulation of Microtubules using Fibrin and Thrombin

Sept 2021-Oct 2021

- Extracted Microtubules from a Fibrin/Thrombin solution and inserted proteins into those microtubules to test the decay to determine if they would be viable in a drug delivery system.
- Isolated the Microtubes and tested them over the week to measure the protein release rate.

Blood Pressure Testing of Live Lab Rats

Sept 2021-Oct 2021

- Injected rats with anesthesia and separated the vagus nerve from the carotid artery via blunt dissection to measure blood pressure.
