Objective:

Biomedical Informatics MS graduate with a healthcare background, pursuing an entry-level clinical data analyst role to support clinical data validation, reporting, and compliance while contributing to high-quality, data-driven clinical research and patient care initiatives. Focus on EHR configuration, clinical systems, and data integration. Skilled in terminology mapping, data wrangling, and converting unstructured clinical data into structured datasets to support clinical decisions.

Current Work:

- Research assistant at the University of Utah (part-time)

Education:

- Master of Science in Biomedical Informatics (Applied Clinical emphasis), (Expected May '26), University of Utah
- Bachelor of Medicine and Bachelor of Surgery (M.B.B.S), J.J.M. Medical College, India
- House Surgeon Internship, Government Hospital in India
- Completed pre-courses for Bioinformatics- B.M.I., D.B.M.I Standards program and Business Seminar, University of Utah

Certification:

- C.I.T.I. Program: Biomedical Research Investigator and Key Personnel

Research Experience:

- Contribute to the Utah South Asian Cardiovascular Health Initiative by supporting data collection, validation, and research coordination activities.

Informatics/Practicum Experience:

University of Utah — Present

- Performed terminology mapping of pediatric PRECISE study variables to standardized vocabularies (SNOMED CT, LOINC, RxNorm) to support semantic interoperability and downstream analytics.
- Assessed representation quality (exact, partial, no match) and documented mapping decisions to support transparency and data quality improvement.
- Applied foundational knowledge of HL7 FHIR and healthcare data exchange standards in the context of real-world research datasets.
- Collaborated with informatics mentors to validate mappings, resolve ambiguities, and improve mapping workflows and clinical alignment.
- Used SQL, Python, Excel, and Power BI for data cleaning, validation, exploratory analysis, and reporting.

Technical and Informatics Skills:

- Healthcare Standards & Interoperability: HL7, FHIR, LOINC, SNOMED CT, RxNorm, ICD-10
- Data & Analytics: SQL, Python, Excel, Power BI, data validation, data mapping, data quality assessment

- Clinical Informatics: EHR workflows, clinical documentation, terminology management, quality improvement concepts
- Generative AI (Clinical Applications): focused on large language models and prompt engineering, with applied use of LLMs for clinical literature synthesis, logic development, workflow optimization, and evaluation of validation, safety, and risk considerations in healthcare settings.

Rotations:

Emory University Gastroenterology Department

Responsibilities:

- Observed clinical workflows, documentation practices, and interdisciplinary coordination in inpatient and outpatient gastroenterology settings.
- Gained exposure to patient evaluation, diagnostic testing, and treatment planning within U.S. healthcare systems.
- Demonstrated professionalism through strict adherence to patient privacy, confidentiality, and ethical standards.
- Exercised compassion and empathy towards patients, with an understanding of the importance of providing patient-centered care.

University of Nevada and Affiliate Clinics

Responsibilities:

- Worked alongside nurses and physicians, gaining insight into interdisciplinary collaboration.
- Learned about patient care and medical chart documentation.
- Demonstrated professionalism by adhering to confidentiality guidelines and respecting patient privacy.

GI Consultants, Reno, Nevada

Responsibilities

- Learned about outpatient care.
- Gained insight into healthcare professionals' daily responsibilities and challenges.
- Ability to work effectively in a fast-paced environment and prioritize tasks.
- Identified workflow and system gaps during outpatient care delivery and participated in discussions around potential process improvements.

Extracurricular Activities:

- Hiking
- Biking

Professional Strengths:

- Analytical problem-solving and attention to detail
- Interdisciplinary collaboration with clinical and technical stakeholders
- Strong clinical judgment informed by MBBS training
- Professionalism, confidentiality, and patient-centered perspective
