

Khyati Prasad

Jersey City, NJ · khyati.prasad@gmail.com · 732-567-4442

EXPERIENCE: Engineer II, Sustaining

May 2022 – Present

Getinge

Wayne, NJ

- Conduct and manage complex engineering and technical support projects
- Prepare experimental protocols and reports based on statistics for developmental needs
- Identify and solve any problems related to the product or process
- Create technical specifications for product improvements
- Assess necessary parameters for the verification of various methods and procedures
- Handle risk management activities like FMEAs and hazard analysis
- Drive documentation for requirement changes, CAPA investigations, V&V plans and reports

Upstream Processing Associate Scientist

October 2020 – March 2022

Merck & Co., Inc.

Kenilworth, NJ

- Created experiments based on previous design control documentation and literature to improve specific product qualities
- Modified design control documentation based on final process changes
- Modified pilot scale process control strategies to be better implemented in large scale manufacturing
- Analyzed data in JMP to create reports summarizing objective, results, and possible future solutions
- Interfaced with three cross functional departments and external vendors to provide performance and quality attributes of product

Biomaterials Researcher

October 2018 – December 2019

Gerecht Lab, Johns Hopkins University

Baltimore, MD

- Developed and optimized an innovative vascular graft biomaterial to be biocompatible
- Tensile tested material to match to native tissue mechanical features
- Created a mechanical testing setup to perfuse media through a graft in a small-scale bioreactor
- Implemented protocols testing platelet adhesion to assess biocompatibility of biomaterial
- Presented weekly presentations to 15 colleagues and supervisors, including statistical analysis
- Performed human and porcine platelet culturing, fluorescence microscopy, and electrospinning

Computational Stem Cell Biology, Johns Hopkins University

January 2019 - May 2019

Team Lead

Baltimore, MD

- Performed computational analysis on large data sets in order to simulate cell fate decisions in R
- Utilized understanding of gene regulatory networks and mathematical modelling
- Prepared six projects in R and one final presentation summarizing the methodology of the programming

EDUCATION: M.S.E. Chemical and Biomolecular Engineering

December 2019

Johns Hopkins University

Baltimore, MD

Thesis: Anticoagulant drug attachment to small-diameter vascular graft

GPA: 3.59

B.S. Biomedical Engineering

June 2017

Drexel University

Philadelphia, PA

Concentration in Biomaterials and Tissue Engineering

GPA: 3.65

Patents and IP Applications:

Gerecht S, Elliott M, Mao H, Chen T, **Prasad K**. Heparinized small-diameter vascular grafts. (Application: PCT/US2021/063128).

Gerecht S, Elliott M, Mao H, Chen T, **Prasad K**. Improved mechanical properties of implantable vascular grafts. (Application: PCT/US2020/055662).

SKILLS:

Computer: ANSYS, AutoCAD, ELN, JMP, Imaris, MATLAB, Microsoft Office, PTC Creo, Python, R, SolidWorks, ZEN

Laboratory: Agilent Bravo, AMBRs, cell culture, confocal, fluorescence, and light microscopy, flow cytometry, mass spectral data analysis, micropipetting, UPLC
