

KOFI A. YEBOAH

Dallas, TX 75226 | 414-581-9466 | kofiyeboah93@gmail.com | LinkedIn: linkedin.com/in/kofi-yeboah-61375730b

Professional Summary

Results-driven Data Analyst and BI Analyst with 7+ years of experience optimizing business operations and driving growth in the Financial, Healthcare, and Engineering sectors. Expert in leveraging advanced analytics, data visualization, and cloud platforms to deliver actionable insights and streamline processes. Proficient in Excel, SQL, Power BI, Tableau and ServiceNow with a proven track record of developing end-to-end data solutions. Adept at transforming complex data sets into strategic assets enhancing decision-making and ensuring data integrity. Known for strong problem-solving skills, collaboration with cross-functional teams, and delivering high-quality data solutions in dynamic environments.

Technical Skills Summary

Database Management: ServiceNow Tables, Microsoft Access, PostgreSQL, Pop SQL, MySQL, MS SQL Server, SSMS, Oracle PL/SQL, Snowflake

BI Tools: Power BI, Tableau, Alteryx, ServiceNow Performance Analytics, ServiceNow Module, Looker, SSRS, SSIS, Tableau Prep

Programming: SQL, DAX, HTML, API, Postman, Splunk, Python

Cloud Platforms: AWS, AWS Athena, Azure, Google Cloud Platform (GCP), Smartsheets, SAP S/4HANA

Data Processing: Alteryx, ETL, Data Modeling, Advanced Analytics, A/B Testing, Machine Learning, Artificial Intelligence, Databricks, ServiceNow, Google Sheets

Software: QuickBooks, SharePoint, MS Office Suite (Word, Excel (advanced), PowerPoint, Outlook), SAP, SAS, Alteryx, Looker, Jira, ServiceNow, Confluence

Other: Data Governance, TLM (End-of-Life Process), OLTP, OLAP, XML CSV, flat files, SDLC, ITSM, ITIL, SOAPUI, Data Visualization

Professional Experience

• Humana – Data Analyst II (Remote)

August 2024 – Present

- Oversee comprehensive data validation initiatives across enterprise applications, ensuring data integrity and consistency within ServiceNow, Excel, and SQL-based platforms like SQL Server, Oracle, and Linux systems.
- Develop and maintain robust Alteryx workflows for automating data validation and transformation across SQL Server and Oracle environments.
- Utilize Alteryx parsing tools to standardize unstructured datasets and streamline ingestion pipelines.
- Analyze incident management, change management, and SLA performance to improve ITSM efficiency and service delivery.
- Design and implement complex SQL queries and stored procedures to support advanced data extraction, transformation, and analytics.
- Spearhead the development of advanced Power BI dashboards and scorecards, utilizing DAX to drive key business insights and support executive-level decision-making.
- Automate recurring reports using Python, reducing manual intervention and turnaround times.
- Drive cross-functional collaboration between data engineering, infrastructure, and application teams to resolve data

issues and improve validation workflows.

- Implement automation strategies to optimize service delivery and SLAs.

- **Rone Engineering – Data Analyst / BI Developer (Remote)**

November 2019 – August 2024

- Developed interactive Tableau and Power BI scorecards, dashboards, and visualizations tailored for geotechnical engineering projects, integrating various chart types (e.g., line charts, heat maps) and interactive features to facilitate strategic decision-making processes.
- Aggregated and structured large datasets using Google Sheets and Excel tables, using advanced Excel techniques including VLOOKUPS, XLOOKUPS, Fuzzy Lookups to match and standardize inconsistent vendor and project data.
- Applied A/B testing methodologies to evaluate and optimize engineering process improvements, supporting data-driven project decisions.
- Designed and optimized complex SQL queries to support data analysis and reporting, enhancing database performance and ensuring efficient data retrieval.
- Created SQL-based reports integrating ServiceNow data with external data sources, improving IT spend forecasts.
- Developed and maintained database structures, including tables, views, and indexes, to ensure data integrity and streamline data management processes.
- Developed detailed documentation outlining project methodologies, providing clear guidance for future analysts working on similar projects.
- Supported geotechnical engineering teams by analyzing soil and foundation data, contributing to optimized project designs and successful project outcomes.

- **UnitedHealthcare – Business Intelligence Analyst / Data Analyst (Remote)**

August 2018 – November 2019

- Developed comprehensive Tableau and Power BI dashboards and scorecards, incorporating various chart types and interactive features to support clinical decision-making and improve healthcare outcomes.
- Developed and implemented payment integrity analytics to detect improper claims, reducing fraud, waste, and abuse.
- Utilized AWS Athena for querying large-scale healthcare datasets, improving reporting speed and enabling scalable analytics.
- Conducted data-driven assessments to ensure claims accuracy, leveraging SQL, Power BI, and Tableau to identify anomalies.
- Collaborated with cross-functional teams to improve claim adjudication processes, enhancing overall payment integrity efficiency.
- Created dashboards and reports to monitor payment trends and compliance with industry regulations.
- Validated data integrity and processes to ensure the accuracy and reliability of clinical performance metrics, achieving a 95% accuracy rate in peer quality assessments.
- Designed and customized reports using Excel, SQL Server databases, and Power BI, tailored to meet specific requirements within the healthcare sector.
- Extracted, transformed, and loaded data from diverse sources, optimizing data processing efficiency and reducing processing time by 40%.
- Produced logical and physical data models to streamline clinical data organization and accessibility.
- Collaborated with clients and team members to clarify visualization requirements, ensuring alignment with business and objectives.

- Optimized Microsoft SQL queries, stored procedures, and functions, improving query latency and database performance by 30%.

- **The Concord Group – Financial Data Analyst (Remote)**

May 2017 – August 2018

- Designed and deployed robust data, financial, and accounting BI solutions using Excel, Power BI, and Tableau.
- Provided FP&A support, creating and maintaining financial analysis models such as break-even analyses and scenario modeling for real estate projects.
- Evaluated and improved existing BI systems through effective database queries and comprehensive analysis.
- Led the development of KPIs, dashboards, and metrics through cross-functional collaboration.
- Supported annual operating plan development and quarterly forecasts.
- Utilized enterprise financial software to analyze costs, trends, and derive budget/payment scenarios.
- Assisted in the month-end close process, including COGS entries and preparation of monthly reporting packages.
- Developed and maintained financial models to analyze cost, margin, and profitability.
- Wrote basic Python scripts to automate financial data cleansing and perform, exploratory analysis, streamlining reporting processes.
- Identified best practices, recommended enhancements, designed complex reports, and executed SQL queries for various data validation and analysis purposes.

Education / Training / Certifications

University of Wisconsin Milwaukee, Sep 2012 – May 2017

Bachelor of Science – General Engineering, GPA: 3.6/4.0

Certifications:

- Google Data Analytics
- Microsoft Certified Professional – MTA
- ServiceNow
- ITIL Foundation Certified
- AGILE (Scrum/Kanban)

Additional Information

Interests: Athletics (Gym), Hiking, Soccer, Basketball, Snooker, Travel

Work Authorization: US Citizen
