

Name: Madhu Varma
Phone: +1 (289)588-6573
Email: madhuvn0195@gmail.com

Professional Summary:

- Overall, 4 years of Professional IT experience with 2 years of experience as a Python Developer, proficient in Django, Flask, RESTful APIs, and data analysis using libraries like Pandas and NumPy. Additionally, 2 years of experience as a DevOps Engineer, skilled in Azure, Jenkins, Docker, Terraform, and CI/CD tools to automate and optimize deployment pipelines.
- Adept at collaborating with cross-functional teams to ensure smooth deployment cycles, great customer service, and high-quality code delivery, while leveraging both Python development and DevOps practices to enhance system performance.
- Strong hands-on development and configuration experience with software provisioning tools like Chef, puppet and knowledge on Vagrant.
- Experience in Installing, upgrading and configuring of Linux flavors like RHEL, CentOS, Debian, Ubuntu, windows.
- Install and configure DHCP, DNS, The Web (Apache), Mail, FTP, NIS, Proxy and file servers on Linux servers.
- Experience in creation and managing user accounts, security rights, disk space and process monitoring in Redhat Linux.
- Worked in building new Chef Cookbooks for Apache, Tomcat, Web-based applications and also for monitoring tools etc.
- Experienced in cloud automation using AWS cloud formation templates.
- Experience with CI (Continuous Integration) and CD (Continuous Deployment) methodologies using Bamboo and Jenkins.
- Configured various jobs in Jenkins for deployment of applications and also used to automate software builds with one click.
- Strong experience in setting up the entire Chef infrastructure from scratch.
- Used source control tools such as SVN, GITHUB to save and manage software code base and revisions in a repository.
- Expertise in integrating Rundeck and Chef for deployments.
- Experience in Scripting languages Shell and Python.
- Hands-on experience in working with automated deployment using terraform and AWS cloud formation templates.
- Experience in writing the custom Shell scripts for managing various enterprise applications.
- Worked with log management tools like Splunk and Live logs.
- Experience in implementing Apache, Tomcat and MySQL database.
- Proficiency in Python for both front-end and back-end programming, including data analysis and visualization utilizing libraries such as Pandas, NumPy, and Matplotlib.
- Experienced with relational databases as well as NoSQL databases, with a focus on query design and optimization.
- Able to use Git for version control, ensure effective collaboration, and manage code changes across numerous development environments.
- Skilled in integrating third-party APIs, automating operations, and connecting apps to external services to increase functionality.
- Proven ability to debug difficult problems, identify bottlenecks, and optimize code for better performance and scalability.
- Knowledge in writing unit tests with frameworks such as pytest and unittest, ensuring high code reliability and reducing bugs.
- Expertise in requirement gathering, analysis, solution design, development, implementation, setup, testing, customization, maintenance, support and data migration.
- Good communication with presentation and technical writing skills.

Email: madhuvn0195@gmail.com

Technical Skills

Operating Systems	Windows, Linux, UNIX
Version Control Tools	GIT
Languages	Shell, Python, YAML.
Databases	My SQL, MS Access, Oracle 9i/10g/11g, DB2
Application Servers	Tomcat, Weblogic.
Tools	Jenkins, Puppet, Ansible, Nexus, PyCharm, Visual Studio Code, Terraform and Octopus.
Testing Tools	Selenium IDE, Selenium Webdriver, TestNg, Cucumber, PyTest, Unittest.
AWS Services	AWS EC2, VPC, EBS, SNS, RDS, EBS, CloudWatch, CloudFormation AWS Config, S3, Autoscaling, Cloud Trail, Lambda
PAAS	Openshift 3.3 and Elastic Beanstalk
Cloud Services	AWS, Azure.
Microservices and Orchestration	Docker, Docker Swarm, AWS ECS, AWS EKS.

Professional Experience

Client: Home Depot, London, Canada
Role: Software Engineer

Date: Feb 2023 – Present

Responsibilities:

- Focused on automation, containerization, and integration monitoring and configuration management.
- Streamlined applications delivery to get applications out to customers faster.
- Developed and implemented software release management strategies for various applications according to agile process.
- Used SVN and GIT as source code repository and involved in migrating from SVN to GIT.
- Created release branches in GIT by GIT Administration including branching, reporting and assisting with project and end user support.
- Managed the GIT using Nexus tool to automate the build process and used the same to share the snapshots and releases of internal projects.
- Used PowerShell for DevOps in Windows-based systems.
- Performed integration of Code Quality Analysis techniques - Check style, Find bugs with CI tools like Bamboo.
- Create and setup automated nightly build environment for java projects using maven.
- Build scripts using ANT and MAVEN build tools in Jenkins to move from one environment to other environments.
- Used Puppet and Chef for Configuration Management tool.
- Experience in automation using Puppet and Chef.
- Developed automation scripting in Python (core) using Puppet to deploy and manage Java applications across Linux servers.
- Used Shell scripts to automate the deployment process.
- Experience in Installation of Splunk and setting up all the required attributes.
- Worked on Splunk to monitor the infrastructure implementation.
- Deployed java applications to application servers in agile continuous integration environment and also automated the whole process.
- Responsible for installing Jenkins master and slave nodes.
- Worked on Micro Services deployments on AWS ECS and EC2 instances
- Worked on Docker and deploying & maintaining Micro services in Dev & QA env.

Name: Madhu Varma
Phone: +1 (289)588-6573
Email: madhuvn0195@gmail.com

- Implemented docker-maven-plugin in maven pom to build docker images for all microservices and later used Docker file to build the docker images from the java jarfiles.
- Implemented build stage- to build the micro service and push the docker container image to the private docker registry.
- Creating Ansible Playbooks, to Deploy VM and install the Components as per requirements.
- Automation using Puppet and involved in developing Manifest and Modules for System and Application Configuration Management.
- Worked on Docker open-source project by automating the deployment of applications inside software containers.
- To achieve Continuous Delivery goal on high scalable environment, used Docker coupled with load-balancing tool Nginx.
- Followed agile principles and used JIRA for maintenance and Bug development tasks.
- Installed Microsoft Team foundation Server 2010 Power Tools to enhance the native features of Visual Studio and TFS. Configured software builds and automated build process and deployed to non-production and production environment.
- Automated the build and release management process including monitoring changes between releases.
- Configure, monitor and automated cloud-based service Amazon Web Services.
- Developed a Python-based web application to assist with asset management and decision-making, improving business processes and overall workflow.
- Actively participated in code reviews, fostering a culture of quality, knowledge sharing, and continuous improvement within the development team.
- Worked on PL/SQL database objects tables, views, sequences, triggers, Procedures, Functions, Triggers, Cursors, Exceptions Partitions, analytical functions, views, Indexes and global temporary tables etc.
- Developed, maintained and distributed release notes for each scheduled release.
- Kept track of all releases and request of the developers through infrastructure management tool.

Environment: Subversion, GIT, Ansible, puppet, Splunk, Jenkins, Shell scripts, bash, Maven, bamboo, Apache Tomcat6.x/7.x, Jenkins1.x, JIRA, SonarQube, Open stack, Maven, Nagios4.x/5.x, Linux/Unix, PL/SQL, Windows, Java, J2EE, Docker, AWS, Terraform.

Client: Morgan Stanley, ON, Canada
Title: SRE

Date: Jan 2021 – Jan 2023

Responsibilities:

- Implemented AWS solutions using EC2, S3, RDS, EBS, ELB, Auto Scaling groups, Optimized volumes, Cloud Formation and Lambda.
- Used IAM to create new accounts, roles and groups and engaged in enabling lambda functions for dynamic creation of roles and automated the cloud deployments using Chef, python and AWS Cloud Formation templates.
- Written templates for AWS infrastructure as a code using Terraform templates to build staging and production environments.
- Configuring and Networking of Virtual Private Cloud (VPC) written Cloud Formation templates and deployed AWS resources using it.
- Involved in Configuration Automation and Centralized Management with Chef, implemented to manage all existing servers and automate the build/configuring of new servers.
- Responsible for testing Chef Cookbooks on AWS instances using Python and to run Chef scripts to provision Dev servers.

Email: madhuvn0195@gmail.com

- Implemented, maintained monitoring & alerting of production & corporate servers/costs using AWS Cloud Watch.
- Designing and implementing CI (Continuous Integration) system: configuring Jenkins servers, Jenkins nodes, creating required scripts, and creating/configuring VMs (Windows/Linux).
- Installed Docker Registry for local upload and download of Docker images and more from Docker Hub.
- Server configuration management via Chef and System orchestration via Ansible.
- Experienced in Commercial Off the Shelf (COTS) and technical development.
- Worked on automating task-using Puppet. Application as well as any upgrade to the nodes were push through Puppet and cloning it to Gitlab.
- Scripting in multiple languages on UNIX, LINUX - Bash, Shell script etc.
- Working with different team members for automation of Release components.
- Proficient in Terraform for automating infrastructure provisioning, managing infrastructure as code (IaC), and ensuring consistent, reproducible, and scalable cloud environments across Azure, or other cloud platforms.

Environment: AWS, EC2, SNS, SES, Web Servers, Jenkins, CI/CD, Ansible, Docker, Perl, Python, VMware, Red hat Linux, Java, Maven and Cucumber.

Client: Digital Dynamics Pvt Ltd, Hyderabad, Ind
Role: Python Developer

Date: July 2016 – Dec 2017

Responsibilities:

- Developed an application for a telecom company, providing insights on consumption, user details, and payment methods, significantly impacting business operations.
- Architected a microservice-based customer-facing website, improving page load efficiency by 25% and overall site performance by 20%.
- Participated in application design and development discussions with clients and management, ensuring adherence to established specifications and standards.
- Designed and built RESTful APIs for client-server communication and integrated third-party APIs.
- Worked with SQL and NoSQL databases to create and optimize queries for application data storage.
- Participated in debugging, refactoring, and unit testing of code using PyTest and Unittest to ensure functionality and reduce bugs.
- Developed small-scale Python applications to automate internal tasks and improve operational workflows.
- Collaborated with senior developers to implement features and improve system performance in an Agile environment.
- Set up and configured Bitbucket server.
- Maintained and administered GIT source code tool.
- Created Branches, Labels and performed Merges in Stash and GIT. Support the code builds by integrating with continuous integration tools (Jenkins).
- Installed and configured Jenkins for Automating Deployments and providing an automation solution.
- Integrated GIT into Jenkins to automate the code check-out process.
- Used Jenkins for automating Builds and Automating Deployments.
- Worked with customers, developers, testing, product management and support staff.

Environments: MySQL, Python, Jenkins, JIRA, Maven, GIT, AWS, Shell Scripting, Windows
