

Manali Shah

Chicago, IL • (312) 826-5904 • manalishah081299@gmail.com [linkedin.com/in/mshah/](https://www.linkedin.com/in/mshah/)

Summary

Versatile language-agnostic software developer with expertise in Python. Proven track record of contributing to large-scale web applications, optimizing data processing, and implementing user-friendly interfaces. Excellent problem-solving skills and a strong commitment to delivering innovative solutions in Agile environments.

Education

Illinois Institute of Technology

Master of Science in Computer Science

Aug 2021 - May 2023

Chicago, IL

Gujarat Technological University

Bachelor of Engineering in Computer Engineering

Aug 2017 - June 2021

Ahmedabad, Gujarat, IN

Technical Skills

Languages: Python, Java, SQL, HTML, CSS, Ajax, JSON, JavaScript, React, Bootstrap, Rest API

Version Control tools: Git, Github ; **Methodologies:** SDLC, Agile, CI/CD, DevOps, Waterfall

IDEs: Visual Studio Code, PyCharm, Jupyter Notebook; **Database:** MySQL, Postgres, DynamoDB, Cassandra

Frameworks: Django, Robocorp, Flask; **Cloud Platforms:** Microsoft Azure, AWS

Collaboration Tools: Atlassian Software Suite (Jira, Confluence, Bitbucket)

Professional Experience

Motorola Solutions

Programmer 1

Chicago, IL

September 2023 – Present

- Developing automated test scripts using Microsoft Playwright to ensure the functionality and stability of web applications.
- Designing and implementing Robotic Process Automation (RPA) solutions using Robocorp, streamlining repetitive tasks and improving efficiency.
- Utilizing Python scripting to write automation code for both Playwright and Robocorp.
- Developing a Python-based script for sanitizing and decoding engineering log files, with robust error handling for invalid or corrupted input data.
- Automating the processing of log files through single file and batch directory inputs, streamlining the generation of sanitized text outputs.
- Packaging the script into standalone Windows executables using PyInstaller, simplifying distribution and deployment without requiring dependencies
- Using Copilot AI tool for integrated code analysis and debugging, which improved code quality and reduced debugging and development time by 30%, helping to enhance team productivity.
- Conducting regular verification of Jenkins automated build processes to identify failures or errors in the software build.
- Working in an Agile development environment, participating in sprint planning, daily stand-ups, and sprint reviews.

Softvan

Software Developer

Ahmedabad, IN

June 2020 – Aug 2021

- Analyzed client business requirements and translated them into dynamic web solutions using Python with Django and Flask frameworks.
- Developed monitoring and notification tools using Python, leveraging advanced data structures and algorithms, which improved application efficiency by 20%.
- Created several RESTful APIs to facilitate seamless communication and project management within Scrum projects, enhancing organizational efficiency and streamlining project maintenance.
- Utilized Microsoft Azure and AWS for scalable development and testing environments.
- Collaborated with Flash developers to integrate PHP/MySQL back-end, enabling smooth data entry and retrieval processes, and executing database queries with mysql-connector.
- Managed and displayed patient records and policy information with simple UI components.
- Improved data security and reporting by implementing efficient data caching techniques.
- Developed user-friendly interfaces with HTML5, CSS3, and JavaScript, improving user experience and satisfaction.
- Conducted code reviews and optimized existing codebases, reducing system load and improving application scalability.
