EDUCATION

University of North Carolina at Charlotte, NC, USA

Master of Science in Computer Science (Concentration in Data Science)

Jan 2024 – May 2025

GPA: 3.90/4.0

Sreenidhi Institute of Science and Technology, Hyderabad, India

Bachelor of Technology in Computer Science

Jun 2019 - Jun 2023

GPA: 8.32/10

TECHNICAL SKILLS

Programming Languages: Python, Java, R, C and C++

Databases: MySQL, Oracle.

Libraries: NumPy, Pandas, Matplotlib, Scikit-Learn, PySpark.

Visualization Tools: Power BI, Tableau, Microsoft Excel.

Version Control: Git, Github.

WORK EXPERIENCE

Data Analyst

AIS, Hyderabad, India

Jan 2023 - Dec 2023

- Utilized Excel, SQL, and Python for data collection, cleaning, and analysis, leading to a 30% improvement in accuracy by uncovering key trends and insights.
- Created and maintained Power BI dashboards and visualizations to clearly convey results, boosting stakeholder decision-making efficiency by 25%.
- Earned full recognition for outstanding contributions and performance, resulting in a full-time job offer.

PROJECTS

Plant Disease Detection using Image Processing

- Developed a machine learning model for detecting and classifying plant diseases using image processing techniques.
- Collected and preprocessed images of plant leaves with various diseases to create a robust training dataset.
- Applied image processing methods such as color space conversion, filtering, and segmentation to enhance image features and isolate regions of interest.
- Extracted features such as texture, shape, and color using techniques like Histogram of Oriented Gradients (HOG) and Local Binary Patterns (LBP) for accurate classification.
- Implemented a Support Vector Machine (SVM) classifier to distinguish between healthy and diseased plants, achieving high accuracy in disease detection.

Sentiment Analysis

- Designed and implemented a sentiment analysis algorithm using **R** to classify text samples (emails, social media comments, advertisements, literary passages) into positive, negative, and neutral tones.
- Integrated advanced sentiment detection to identify specific emotions such as **happiness, excitement, sadness, and anger**.
- Collected and preprocessed diverse text datasets for accurate interpretation and analysis.
- Visualized insights using a **word cloud** for clear and impactful presentation of results.
