

Michael K Appiah Essandoh

P: 908-315-6930 | E: michaelessandoh@gmail.com

Address: 85 N McQueen Rd, Gilbert, AZ 85233

Professional Profile:

Technically adept IT professional with 4+ years of hands-on experience in data center operations, hardware troubleshooting, infrastructure automation, and incident response. Proven ability to drive operational efficiency, reduce downtime, and support large-scale, high-availability environments. Strong background in server maintenance, physical infrastructure, and networking. Committed team player with a track record of exceeding performance goals and maintaining high safety and quality standards.

Professional Experience:

Fraud Analysis/ Specialist

JP Morgan Chase, Hybrid March 2025 – present

- Investigated and resolved 200+ fraud alerts weekly using real-time monitoring tools (Splunk, Dynatrace), reducing false positives. Collaborated with data center operations teams to trace and isolate anomalies across infrastructure layers, cutting downtime due to by 30% and improving incident resolution time by 40% fraudulent access attempts by 25%.
- Implemented automated log correlation across cloud and physical server environments, increasing threat detection accuracy by 35% and boosting operational uptime to 99.95%.
- Led cross-functional RCA (root cause analysis) sessions involving fraud and security events, implementing infrastructure changes that decreased repeat incidents by 20% quarter-over-quarter.

Application Production Support Specialist/Systems Engineer

Wells Fargo, Remote June 2024 – August 2024

- Delivered 24/7 production support across hybrid cloud and on-prem environments, resolving over 98% of incidents within SLA and minimizing application downtime for 10,000+ end users.
- Diagnosed and remediated hardware and server issues (rack/stack, power cycling, cabling), reduced ticket resolution time by 35% and improved infrastructure stability in Tier III data centers.
- Leveraged Splunk and Dynatrace to correlate system/application logs with physical infrastructure failures, reducing false alarms by 30% and improving MTBD/MTTR by 40%.
- Executed firmware upgrades, hotfix deployments, and physical hardware replacements with zero impact to production uptime, contributing to 99.99% system availability and minimal disruption to business operations.

DevOps/IaC Engineer

TEK Systems, Remote | June 2024 – July 2024

- Automated server provisioning and infrastructure deployments across AWS and physical data centers
- Integrated IaC practices with on-site rack/stack operations and network configuration, accelerating system deployment times by 40% while maintaining full compliance with data center SOPs.
- Collaborated with on-site technicians to align CI/CD workflows with hardware maintenance schedules, reducing unplanned outages by 25% and ensuring 99.95% service availability.
- Implemented infrastructure health monitoring for both cloud and physical systems, identifying bottlenecks and hardware faults in real time, improving MTBD and MTTR by 35%

Amazon Hardware Operations Specialist

Amazon, Boston, MA | May 2023 – December 2023

- Performed end-to-end hardware lifecycle tasks including rack/stack, cabling, diagnostics, and decommissioning of 1,500+ servers, reducing deployment time by 35% and improving operational throughput.
- Collaborated with engineering teams to implement IaC workflows in alignment with physical infrastructure builds, cutting provisioning errors by 30% across AWS-hosted environments.
- Monitored hardware performance and conducted root-cause analysis of physical faults, reducing equipment failure rate by 25% and supporting 99.95% uptime across production systems.
- Used ticketing systems and inventory tools to track, stage, and fulfill hardware requests, improving SLA compliance by 40% and ensuring full audit traceability across data center operations.

Technical Skills:

- **DevOps & IaC:** Proficient in Terraform, Ansible, Jenkins, Docker, and Kubernetes for automating infrastructure and managing cloud environments (AWS, Azure, GCP).

Languages

- Proficient: Shell Programming, Python, Bash, Perl, Powershell, Yaml, Ruby, Java, C#, PHP, Groovy
- Familiar: C++

Certificates:

- Linux Essentials
- AWS Competency Essentials
- Cloud Migration Fundamentals
- DevOps Essentials

Education:

B.A. of Communications Technology

Kean University, Union, NJ | Aug 2022
