

Micheal K Campbell

Healthcare Business/Data & Reporting Analyst | SQL • Power BI • Excel • Claims & Enrollment Analytics
Houston, TX | (346) 469-0142 | ck.mike012@gmail.com

Professional Summary

Strategic and detail-oriented Business Systems Analyst with 5 + years of experience supporting Medicaid and Medicare programs across claims, enrollment, eligibility, pharmacy, and prior authorization systems. Proven track record of driving enterprise system modernization, EHR/EMR integrations, and cross-functional initiatives in managed care and healthcare operations. Expert in bridging business and technology through clear documentation, data-driven decision support, and strong collaboration with SMEs, architects, and vendor partners. Skilled in translating complex business needs into actionable requirements, process models, user stories, and test plans. Hands-on with SQL, Power BI, Excel VBA, ServiceNow, Visio, Azure DevOps, and JIRA, with deep experience building dashboards, automating reporting, and supporting clean data flows for CMS and audit compliance. Known for delivering scalable, compliant solutions aligned with HIPAA, HEDIS, and state/federal payer policies.

Core Competencies / Technical Skills

- **Business Tools:**
MS Office Suite, MS Visio, MS Project, SharePoint, QNXT, AMYSIS, FACETS
- **SDLC Methodologies:**
Waterfall, Agile, Scaled Agile Framework (SAFe)
- **Database & Data Analysis:**
MS SQL Server, TOAD, EDW, Teradata Studio Assistant, Microsoft Server, Mongo DB
- **Project Management & Ticketing Tools:**
JIRA, Azure DevOps, ServiceNow, Team Foundation Server (TFS), Salesforce CRM
- **Cloud Platforms:**
Microsoft Azure (certified), AWS (familiar with S3, EC2, IAM, CloudWatch basics)
- **Business & Data Modeling (UML, BPMN, ERD, Process Maps, Figma Wireframes)**
- **Programming: Familiar with Python for data transformation and scripting.**
- **API Testing & Development: Postman, SoapUI**
- **Stakeholder Management & Vendor Coordination**
- **Requirement Gathering (BRD, FRD, User Stories, Workshops)**
- **Healthcare Data Integration (EDI 834, 835, 837, 278, 270/271)**
- **Prior Authorization, Utilization Management, Appeals, Denials, Pharmacy Benefits**
- **Claims Adjudication, Eligibility, Enrollment Corrections**
- **EHR/EMR System Implementations & Enhancements**
- **UAT Planning, Test Script Development, Defect Triage**
- **SQL Queries, Data Mapping, ETL Validation**
- **Reporting Automation (Power BI, Tableau, Excel VBA)**
- **CRM Systems, ServiceNow, Azure DevOps, JIRA**
- **HIPAA, HITECH, HEDIS Measures Support.**

Professional Experience

Business Systems Analyst

CareSource | Remote | Apr 2024 – Present

- Led requirements workshops with UM leadership, care managers, providers, and vendor partners to gather and prioritize enhancements for prior authorization workflows and EHR system integrations.
- Partnered with Digital Health and Provider IT teams to support EHR system integrations for prior auth and care coordination data exchange.
- Designed Visio process maps, Lucid-chart workflows, and Figma mockups for new prior auth system features.
- Created comprehensive BRDs, functional specifications, and user guides for UM and Appeals system enhancements.
- Built Power BI dashboards to monitor turnaround time (TAT), appeals rates, overturns, and pending cases by facility/provider group.
- Developed Power BI dashboards to monitor authorization compliance rates, clinical documentation requirements, and provider service delays.
- Delivered custom Excel reports using pivot tables, conditional formatting, and formulas to track UM turnaround times, provider response delays, and pending authorizations.
- Supported real-time reporting needs by creating and maintaining SQL-based data extracts for care coordination, prior auth volumes, and appeal overturn rates.
- Automated daily summary reports using VBA macros, reducing time spent on manual downloads and formatting.
- Used XLOOKUP to match provider rosters against UM records and detect routing errors in referrals and prior authorizations.
- Acted as liaison between business, IT, and vendor technical teams to drive resolution of provider data mismatches and care authorization issues.
- Collaborated with vendors during EDI 278 transaction onboarding and care authorization automation initiatives.
- Broke down epic stories into smaller, manageable user stories, ensuring each story was well-defined with clear acceptance criteria.
- Rebuilt a 384-page departmental playbook by converting and restructuring it from PDF to a Word-based format for easier editing and distribution.
- Collaborated with vendors and provider IT teams to troubleshoot EDI 278 transaction errors, eligibility lookups (270/271), and care plan referrals.
- Managed ServiceNow ticket assignment and triage for UM process changes, provider requests, and auth system issues.
- Built and maintained Power BI dashboards tracking staff productivity, operational KPIs, and compliance metrics to support leadership decisions.
- Developed and executed UAT test scripts for new prior auth functionality, coordinated defect resolution in Azure DevOps.
- Assisted with the automation of testing efforts by identifying repeatable UAT scenarios and collaborating with QA to streamline regression testing in Azure DevOps.
- Partnered with compliance and regulatory teams to prepare reports for CMS audits and external agency requests.

- Provided data extracts and SQL-based validations to finance and compliance teams for CMS and state audits.
- Supported enterprise system modernization by documenting data flows, recommending improvements to legacy claims and prior auth processes, and aligning technical enhancements with Medicaid requirements.
- Developed healthcare utilization and cost containment reports analyzing claims, pharmacy, and UM data to provide actionable recommendations.
- Assisted in validating inbound and outbound HL7 messages and FHIR API payloads to ensure accurate integration with payer systems and UM processes.
- Supported HEDIS gap closure reporting by aligning prior auth and care coordination activity with measure criteria.
- Supported EHR/EMR interface testing and validation activities to ensure clinical data accuracy during system integrations.
- Ensure all revenue cycle activities comply with healthcare regulations, such as HIPAA, Medicare, Medicaid, and payer-specific policies.
- Utilized Postman API to retrieve provider demographic and credentialing information when records were missing from internal databases during prior auth or appeals processing.

Business Systems Analyst

Centene Corporation | Remote | Mar 2022 – Feb 2024

- Led claims adjudication and enrollment correction initiatives supporting Medicaid, Medicare Advantage, and Marketplace plans.
- Facilitated requirement discovery sessions with stakeholders across claims, enrollment, and provider data management teams to define data correction strategies impacting encounter data and clean claims submissions.
- Managed JIRA and Azure DevOps boards, writing epics, stories, and test cases for claims system enhancements.
- Gathered and documented business and technical requirements related to healthcare EDI transaction processing, including 837, 835, 834, 278, 270/271, and 820 files.
- Built SQL queries and automated Excel VBA tools to extract enrollment data, track PCP corrections, and support clean claim initiatives.
- Designed Tableau dashboards displaying rejected enrollments, terminated provider selections, and financial impact analysis.
- Partnered with stakeholders to standardize reporting usage instructions and reduce dependency on manual support.
- Conducted root cause analysis on PCP assignment errors, eligibility mismatches, and enrollment discrepancies.
- Partnered with technical teams to document requirements for FHIR-based data sharing and tested HL7 transaction flows for compliance with payer operations.
- Supported enrollment and claims data mapping projects involving HL7 interfaces and FHIR resources to align member and provider records across systems.
- Created entity-relationship diagrams (ERDs) and UML activity diagrams to model enrollment data logic and claims adjudication processes for Medicaid systems.
- Supported the automation of testing efforts for enrollment and claims corrections by documenting test scenarios and collaborating with QA to ensure consistency across iterations.

- Authored BRDs, SOPs, and user stories for system updates impacting member eligibility, claims adjudication, and EDI 834 processing.
- Produced business-friendly visuals (process flows, wireframes, user scenarios) to help non-technical stakeholders understand system impacts and proposed solutions.
- Developed Excel VBA scripts to automate repetitive claims reconciliation reports.
- Created ad-hoc reports for business stakeholders using SQL queries on enrollment and claims databases, highlighting trends in denials, financial impact, and provider eligibility errors.
- Used VLOOKUP, XLOOKUP, and advanced Excel functions to identify mismatches in enrollment, PCP assignments, and claim status across large datasets.
- Built reports and dashboards to track revenue cycle metrics such as claims rejections, PCP mis-assignments, and remittance delays.
- Provided analytical support for system migrations, consolidations, and product installations.
- Working closely with the Claim and Med-Cal team to achieve milestone
- Conducted extensive SQL-driven analysis on rejected EDI 834 enrollments, PCP assignment issues, and eligibility misalignment impacting CMS reporting.
- Performed bulk corrections by creating dynamic lookup tables and using VLOOKUP, XLOOKUP, and INDEX/MATCH to cross-reference enrollment records, provider TIN/NPI mismatches, and coverage dates.
- Wrote SQL scripts to detect and remove duplicate member records, identify null values, filter out invalid claim statuses, and flag mismatched provider IDs across enrollment and claim tables.
- Developed ad-hoc reports to provide real-time insights on claims denial trends, eligibility errors, enrollment discrepancies, and pharmacy claims outliers upon stakeholder request.
- Led Post-Implementation Review (PIR) sessions to confirm all deliverables were successfully moved to production and documented lessons learned.
- Used Postman API tools to query provider network endpoints during enrollment corrections when direct database access to updated NPI/TIN data was unavailable.
- Led UAT testing cycles for enrollment/claims releases; validated corrections, monitored defect resolution, and obtained stakeholder sign-off.
- Performed QA reviews of BRDs, test cases, and final deliverables to ensure completeness, traceability, and stakeholder approval prior to implementation.
- Supported HEDIS eligibility validation efforts by ensuring enrollment accuracy for member measure attribution.
- Supported large-scale claims adjudication enhancement and eligibility validation projects focused on Medicaid, Marketplace, and Medicare Advantage populations.

Business Systems Analyst

Medica | Remote | Feb 2020 – Jan 2022

- Supported the implementation of a new Pharmacy Benefit Manager (PBM) system by leading pharmacy benefit workflow mapping, requirement elicitation, and business process workshops.
- Led requirement gathering workshops with Pharmacy Directors, Benefits Managers, and IT teams for pharmacy system enhancements.
- Documented pharmacy claims workflows, formulary configurations, and member cost-share calculations using MS Visio.
- Created step-by-step documentation to guide business users on accessing and interpreting newly automated reports.
- Supported compliance reporting by validating Medicare Part D pharmacy claims data accuracy for CMS submissions.

- Coordinated pharmacy revenue cycle tasks by validating pharmacy claims flows, cost-share accuracy, and proper payment posting.
- Worked with PBM partners to align formulary and benefit configurations with reimbursement requirements and clean billing standards.
- Acted as liaison between business owners, developers, and QA teams during formulary configuration changes and clinical prior authorization rule updates.
- Developed BRDs, FRDs, and wireframes for pharmacy claims edits, benefit configuration changes, and clinical prior auth workflows.
- Designed and executed A/B testing strategies to validate system changes and workflow enhancements, measuring impact on user efficiency, claim processing speed, and error rates.
- Conducted detailed validation of EDI 835 and 837 transactions related to pharmacy claim payments and submission workflows.
- Documented requirements and testing steps for projects involving FHIR APIs to exchange clinical data for pharmacy prior authorizations and eligibility checks.
- Supported the reconciliation of pharmacy enrollment discrepancies via EDI 834 file analysis and correction processes.
- Led Post-Implementation Reviews (PIR) to assess pharmacy system deployments, documenting performance, stability, and user feedback.
- Wrote detailed test cases, user scenarios, and use cases aligned to business and functional requirements for claims, enrollment, and pharmacy systems.
- Built Power BI dashboards to visualize pharmacy claim trends, high-cost drug utilization, and formulary compliance rates.
- Collaborated with PBM and IT teams to analyze rejected claims and troubleshoot pricing and NDC mismatches within RxClaim; developed reporting to track high-cost drug utilization and claim resolution trends.
- Conducted data validation and testing coordination during PBM system integration phases, including claim adjudication and member cost estimation.
- Partnered with compliance teams to support CMS audit data submissions related to pharmacy claims accuracy and coverage determination processes.
- Automated data extraction and visualization processes by integrating SQL data pulls with Power BI dashboards, ensuring stakeholders had access to real-time staff performance metrics.
- Authored SOPs and training materials for new PBM systems, pharmacy claims operations, and formulary management processes.
- Supported appeals and grievance reporting related to pharmacy denials and coverage disputes.
- Worked directly with vendor technical teams to validate pharmacy benefit configurations and ensure timely resolution of discrepancies.
- Led UAT execution and stakeholder demonstrations of pharmacy reporting dashboards, ensuring alignment with clinical and business needs.

Junior Business Analyst

Aiden Engineering USA | Houston, TX | Jan 2019 – Dec 2019

- Gathered and analyzed business requirements for internal operational and scheduling systems.
- Designed workflow diagrams, Visio process maps, and system enhancement mockups for manufacturing and reporting tools.
- Supported backlog management and sprint planning in Azure DevOps and JIRA.
- Act as a liaison between business teams and IT to ensure alignment of technology and revenue cycle processes.

- Built SQL queries and Excel VBA macros to automate reporting on production performance and order fulfillment.
- Conducted data migration from legacy systems into Wynsure and validated data accuracy.
- Facilitated user acceptance testing (UAT) sessions, validated changes, and collaborated with QA on defect resolution.
- Developed SOPs and internal user guides for system upgrades and reporting enhancements.
- Developed and maintained Excel-based operational dashboards tracking production throughput, order fulfillment, and resource utilization.
- Automated reporting processes using Excel macros (VBA) and pivot tables, reducing manual report generation times by over 50%.
- Extracted and cleaned data from internal CRM and ERP systems to support daily business reporting needs for sales, operations, and finance teams.
- Conducted business requirements sessions with internal stakeholders to identify pain points in existing reporting workflows and propose automation solutions.
- Built dynamic Excel templates to track sales leads, customer interactions, and service ticket resolution statuses.
- Designed process flows and data maps using Visio to document CRM workflows and customer service ticket lifecycles.
- Authored user guides and SOPs for CRM data entry standards, reporting protocols, and dashboard usage.
- Support the implementation or enhancement of revenue cycle management (RCM) systems.
- Supported leadership reporting by producing weekly executive summaries of operational KPIs, customer satisfaction metrics, and CRM ticket backlog status.
- Utilized MicroStrategy to generate performance and operational reports, delivering timely insights to leadership.
- Enhanced report accessibility by aligning MicroStrategy outputs with department KPIs and visualization standards.

Education

Bachelor of Science – Computer Science
Estam University.
