

MIHIR MAKWANA

Chicago, IL | makwanamihir5@gmail.com | (857) 294-5059 | [linkedin.com/in/Mihir228](https://www.linkedin.com/in/Mihir228)

SUMMARY

Experienced DevOps Engineer with **3+ years** building large-scale **distributed systems, CI/CD build pipelines, and cloud infrastructure** in **Python, Bash, and Java** across **AWS, GCP, and Oracle Cloud**. Develop automation and **developer tooling** that improves **engineering productivity** and the software release process, delivering **highly available, fault-tolerant, low-latency** services across the full software development life cycle — infrastructure as code, CI/CD, observability, and production on-call.

PROFESSIONAL EXPERIENCE

Software Engineer, Formidium Corp | *Chicago, IL* Jan 2026 – Present

- Developed and deployed **Generative AI coding agents (Claude)** to automate code generation, testing, and refactoring across distributed microservices, improving **developer productivity**, feature delivery, and code quality.
- Built and owned **GitOps CI/CD pipelines with Jenkins and GitHub Actions**, integrating **SonarQube** quality gates, automated tests, and **Docker layer caching** to cut build times, deploying via **Argo CD Image Updater** to sync Helm-packaged manifests to Kubernetes with Slack and email build alerts.
- Authored **reusable Terraform modules** with remote **state management** and **HashiCorp Vault** for secrets management, and automated configuration with **Ansible and Bash** on Linux/Unix for secure, consistent, repeatable provisioning.
- Supported the migration from **AWS to Oracle Cloud Infrastructure (OCI)**; configured **Kubernetes (OKE)** clusters with **Terraform and Docker**, deploying Prometheus exporters via Helm for **high-availability** monitoring.
- Built **Datadog and Grafana** dashboards with **AIOps anomaly detection** and alerting for compliance monitoring, surfacing infrastructure spikes and traffic surges to enable **proactive** intervention and reduce time to detect and resolve production issues.
- Centralized application and server logs with the **ELK stack (Elasticsearch, Logstash, Kibana)**, enabling searchable logging and operational metrics across distributed services.
- Built a **Python script** to parse **JSON-formatted logs** and push metrics to **Grafana**, visualizing error-log counts and trends in **time-series** dashboards.
- Designed and developed distributed **Java Spring Boot microservices, REST APIs, and Next.js (React) front ends** for financial-services analytics platforms (Crypto 360 Tax, Finalytic Fund Admin).
- Owned production **on-call rotation**, monitoring, and root-cause analysis, improving service reliability and **operational excellence** across the platform.

Software Development Engineer, Saayam for All | *Boston, MA* Feb 2025 – Dec 2025

- Designed and developed full-stack, **distributed applications** using **Java Spring Boot REST APIs** and React, containerized with **Docker** and deployed on **AWS (ECS Fargate, EC2, S3)** in fast-paced Agile/Scrum teams.
- Built an **event-driven notification microservice** on **AWS Lambda** backed by Aurora PostgreSQL, instrumented with **CloudWatch and CloudTrail** for centralized logging, metrics, and audit trails.
- Applied **object-oriented design and design patterns** to build **NodeJS** services and MongoDB-backed features, exposing secure REST APIs across loosely coupled microservices.
- Achieved **90% test coverage** through unit, integration, and **test-driven development** (JUnit, Jest), reducing post-release defects by **40%**.

Software Engineer Intern, IpserLab LLC | *Mountain View, CA* Sep 2023 – Dec 2023

- Optimized **PostgreSQL** data-warehouse queries (**+20% performance**), built **event-driven processing with AWS SNS**, and added Selenium UI tests — reducing manual compliance processes by **45%**.
- Created dashboards on **AWS QuickSight and Aurora** for legal and compliance KPIs, enabling automated, enterprise-wide data visibility.

Software Development Engineer, Haqdarshak Pvt Ltd | *Mumbai, India* Jun 2021 – May 2022

- Provisioned secure **GCP infrastructure with Terraform** — custom VPCs, subnets, firewalls, load balancers, and autoscalers managing **Cloud SQL (PostgreSQL)** instances, improving security, reliability, and repeatable environment provisioning.
- Built and deployed **NodeJS/Express REST APIs on GCP** using Pub/Sub and serverless Cloud Functions for streamlined onboarding workflows, automating delivery through **GitHub Actions**.

Software Development Engineer, Onerooft Technologies | *Mumbai, India* May 2020 – May 2021

- Built **ETL pipelines** in Python and SQL on PostgreSQL (**+95% data accuracy**) for financial reporting.
- Reduced **REST API latency from 800ms to 300ms** via query indexing and caching, and cut React page load from 5.2s to 1.2s through code-splitting and lazy-loading.

EDUCATION

Northeastern University — Master of Science, Software Engineering Systems | *Boston, MA* Sep 2022 – Dec 2024

NMIMS University — Bachelor of Technology, Computer Engineering | *Mumbai, India* Aug 2016 – May 2022

TECHNICAL SKILLS

Languages: Java, Golang, Python, TypeScript, JavaScript, SQL, Bash

DevOps & Tools: Docker, Kubernetes (EKS/OKE), Helm, Terraform, Vault, Jenkins, GitLab, GitHub Actions, ArgoCD, Ansible, Prometheus, Grafana, Datadog, ELK, CI/CD, GitOps, Git, Agile/Scrum, SDLC, Linux/Unix

Concepts: Distributed Systems, Microservices, Scalability, High Availability, Fault Tolerance

Cloud & Platforms: AWS (Lambda, EC2, ECS Fargate, S3, RDS, SNS, CloudWatch, CloudTrail, QuickSight), Oracle Cloud (OCI), GCP

Databases: PostgreSQL, MySQL, Redis, DynamoDB, MongoDB, Aurora, Oracle SQL

Frameworks: Spring Boot, FastAPI, React, Next.js, NodeJS, Django, Jest, JUnit, Selenium
