SoC Design Engineer with 3+ years of intensive Data Science training, eager to make a meaningful transition and drive impactful solutions.

EXPERIENCE

SoC Design Engineer | Intel Corporation.

Present

- Led a small team to design and optimize few generations of multi-voltage multi-Ghz blocks in DDR SDRAM for Xeon servers, using leading-edge CMOS process technology and advanced FinFET technologies at 7nm and 5nm nodes.
- Drove multiple designs to manufacturing ready, through all aspects of RTL to GDSII using industry standard Cadence and Synopsys EDA tools for synthesis, place-and-route, and DRC/LVS/DFM/Tool signoff.
- Used my enriched scripting skills and leveraged AI tools to implement advanced solutions for routing congestion, high-speed clock domains and power grid planning.

Recognized Academic Tutor | Georgia Institute of Technology.

2018 May – 2019 May

Intern | Eneo Cameroon.

2016 May – 2016 Aug

Intern | Matrix Telecom.

2015 May – 2015 August

EDUCATION

Certificates & Certifications

- **Certifications:** Google Cloud's Professional Data Engineer Certification.
- **Certificates:** Google Cloud Data Engineer Certificate on Coursera, DeepLearning.AI TensorFlow Developer certificate on Coursera, Stanford University Machine Learning certificate on Coursera.

MS in ECE | Georgia Institute of Technology-Atlanta US

GPA 3.5

- **Related coursework:** Hardware acceleration for machine learning, Radar Signal processing, Digital Processing of Speech Signal, Data Compression & Modeling, Advanced computer architecture.

BS in EET minor and post-grad in CS | Kennesaw State University - Atlanta, US

GPA 3.86

- **Related coursework:** Parallel Programming, Cloud Computing, Bitcoin, Advanced Computer Networking, Advanced Data Structures, Introduction to Machine Learning.

SKILLS & TOOLS

Programming Languages: Python (Numpy, Pandas, scikit-learn, Keras, TensorFlow, PyTorch, XGBoost), MySQL, C/C++, Java

Data Science & Machine Learning: ML Frameworks (TensorFlow, PyTorch, Keras, XGBoost, OpenVINO), Big Data Tools (Apache Beam, Airflow, Hadoop, Spark), Time Series Forecasting, Recommendation Engines

Cloud Platforms: AWS, GCP (BigQuery, Dataflow, Dataproc, Data Fusion, Vertex AI)

Data Visualization and Software Dev Tools: Power BI, Tableau, Jupyter Notebook, Git, Anaconda, Nvidia CUDA

PROJECTS

Predictive Modeling and Optimization for Marketing and Flight Pricing

- Developed and deployed an XGBoost-based Mean Directional Accuracy (MDA) model to forecast flight price movements, increasing booking rate accuracy from 80% to 95%.
- Created a lookalike model using word embeddings (S-BERT, USE, FastText) to predict offline brand visits based on online activity, improving targeted marketing strategies.
- Built a media mix marketing model using Ridge regression and simulated annealing for hyperparameter tuning, boosting hotel booking rates for Vrbo France from 8% to 20%.

Image Processing Software on FPGA

- Worked with a team of 3 engineers to implement a real-time multifunction image processing software (edge detection) that takes images/videos from a PC, sends it serially (UART) to the FPGA, processes it and prints the processed image on a VGA screen.

Object detection and tracker Robot, 'ROVERBOT'

- Conceptualized and built an autonomous robotic vision system prototype from scratch that uses a raspberry pi, Camera (using openCV), motors and several other sensors and electronic devices to quickly detect and track a specified object(s) in real time.

'Quickmafs' Operating system simulator

- Designed and implemented a virtual machine to investigate the performance of different configurations of RAM size, cache size and number of processors for an embedded system application. This research was published to the FIE conference.

ACHIEVEMENTS

Frontiers in Education Conference publication

- Published a paper on the "Design and Implementation of a Simulated Single versus Multicore Operating System for Portable Devices" at FIE conference.

SKILLS & ADDITIONAL INFORMATION

- French/English Proficient. Good Soccer and Tennis player.
