

Moulika Gurramkonda

Full Stack Developer

Linkedin id: <https://www.linkedin.com/in/moulika-gurramkonda/>

Email Id#: moulika048@gmail.com

Ph#: 209-597-8066

Professional Summary:

- Full Stack Developer with 5+ years of experience designing and developing scalable web applications using .NET and Angular. Experienced in full SDLC, from requirements gathering to deployment, with a strong focus on performance, maintainability, and cloud readiness.
- Good Experience in delivering software solutions including **Windows Applications** and **Web Applications** using Microsoft Technologies.
- Working with **.NET 6/8** and **ASP.NET** Core for scalable, cloud-ready applications using Azure and modern DevOps practices.
- Strong backend experience with .NET Core, and hands-on exposure to **Node.js** and **Python Flask** for service development and data automation tasks.
- Experience with Microsoft Application building blocks for .Net projects (**Data Access, Exception Handling, Caching, and Configuration Management Application Blocks**).
- Strong experience in **C#** development **WPF** and **Silverlight**.
- Experienced on **Swagger/OpenApi** for exposing API Metadata for **ASP.NET Core API**.
- Experience in designing and developing cloud-optimized **ASP.NET Core** enterprise web applications and **Web APIs** using **.Net core**.
- Proficient in developing applications using Object Oriented (OO) programming concepts.
- Working experience with **Entity Framework** and **Telerik ASP.NET** Controls.
- Experience in **ASP.NET MVC** in implementing **Models, Views, and Controllers with State Management, Security, Action methods**, etc.
- Knowledge of **ORM** and its related components: **Entity Framework, Language-Integrated Query (LINQ)** query and retrieve data from different data sources (**LINQ to Objects, LINQ to XML, and LINQ to SQL**), **ASP.NET Providers** and **Typed Datasets**.
- Experience with **Fine-Tuning** and **Optimizing** Queries and Stored Procedures.
- Experience in developing single-page applications (SPA) using **JavaScript** and **Angular JS**.
- Experience working and developing applications using **Azure**.
- Experience working on **Microsoft Azure** to deploy the application on the cloud and managing the session.
- Strong hands-on programming, design, understanding, and deep functional experience in creating, deploying, and consuming **REST, SOAP Web Services, and Web API**.
- Experience with different **ADO.NET** objects to interact with databases and good experience in using **ADO.Net** objects such as **SQL Connection Object, SQL Command Object, Data Reader, Dataset, and Data Adapter**.
- Have an excellent software development experience including the full product life cycle with exposures in Code control management system like **Visual Source Safe** and **Azure DevOps, GitHub, or CI/CD**.
- Experience in generating Custom Reports and different types of distributed reports in multiple formats using **Crystal Reports** and **SQL Server Reporting Services (SSRS)**.
- Extensive experience in interaction with Clients and functional people for gathering the business requirements & functional specifications.
- Self-starter, fast learner, proficient in programming logic, and easily adaptable to new technological environments and systems with proven abilities in resolving complex software issues.

Technical Skills:

Frame Works	C#, .NET 6/8, ASP.NET Core, MVC, Web API, Javascript, Typescript, Entity Framework Core, Node.js, Python(Flask), Java (Sprint Boot-basic).
M i c r o s o f t Technologies	C#, VB.NET, ASP.NET 4.0/3.5, MVC 3.0/4.0/5.0, ADO.NET, Crystal Reports, SSRS, gRPC or RESTful APIs, WPF, Web Services, WSDL, Web Forms.
Other Technologies	Java Script, Ajax.
Cloud Technologies	Azure, GCP.
Database	Microsoft SQL Server 2019/2016/2012, MS-Access, MongoDB.

Version Control Tools	Visual Source Safe (VSS), Azure DevOps, GitHub, or CI/CD.
Scripting and Markups	JavaScript, Angular 13+, Angular.js, VBScript, ASP, HTML5, CSS3.
Operating Systems	Windows Variants
Cloud & DevOps	Microsoft Azure, Azure Functions, Azure App Services, Azure DevOps, Git, GitHub, CI/CD Pipelines, Docker

Professional Experience:

Client: Citizens Bank, Providence, RI.

Jul 2023 – Till Date

Role: .Net Developer

Responsibilities:

- Analyze the business process, discuss with users, and prepare a System Analysis and Requirement report.
- Used **UML diagrams** such as Use cases, Class diagrams, sequence diagrams, activity diagrams and **ER diagrams** for precise system design.
- Designed, developed, and enhanced the application in **.NET Framework**.
- Worked on Web-based applications using **C#, ASP.NET, MVC 5.0, ADO.NET, XML, CSS 3 and HTML5**.
- Developed custom user controls to search consumers and providers using **ASP.NET**.
- Designed web forms using **ASP.Net**, and developed different **.NET** assemblies.
- Developed **ASP.NET Core Web API** based on departmental requirements and specifications.
- Used **ASP.NET** User Controls to create steps for submitting and modifying events and evaluation forms.
- Developed Components in **C#**.
- Used **C#** as code behind to implement the business logic of the web forms.
- Implemented a dashboard web application from scratch based on **ASP.NET Core** with **Razor views** and including **dependency injection (DI)** and **Entity Framework Core**, **identity user, role**, and **claims management**.
- Responsible for enhancement, bug fixes, and developing **Microservices** using the **.NET Core framework**.
- Worked on **ASP.NET** Grid Controls that include Grid-View and Repeater and also user controls for reusable components in the application.
- Developed Business components and Data Access components in **C#.Net**.
- Developed the classes using **C#**, which incorporates N-tier architecture and database connectivity.
- Deployment of Web services for online transactions using **C#** and exposed them through **SOAP and HTTP**.
- Developed various web services using **WCF in C#.NET** and consumed by web applications.
- Used **WCF** services for communicating with other applications and components.
- Worked with **WPF** to develop the Graphical Representation of filtered bugs.
- Designed and developed Restful Web Services using **ASP.NET Web API** that is used internally in Paychex and exposed to clients.
- Built a microservice in Node.js for internal reporting (proof of concept), integrating with MongoDB and deployed via Azure App Services.
- Designed and developed **RESTful Web API** and exposed **JSON** objects.
- Performed Code First Approach **Entity Framework Core** to provide code flexibility and to have more customization options and full control over the code.
- Created new web pages using **HTML5, CSS3, XML, Angular.js, and Java Script**.
- Involved in the development of forms for the Application Process and Selection process in **Angular 13+**.
- Worked on the UI widget components development using **TypeScript and Angular 13+**.
- Involved in developing web pages using **Angular.JS** framework and familiar with various Angular.JS filters to manipulate text within **HTML** views and Angular.JS services for reusable functionality.
- Involved in planning strategies to move existing applications from on-premise to **Azure cloud platform**.
- Involved in Developing **Azure cloud services** for supporting cloud environment for migrated application.
- Implemented code by using **Continuous Integration and Continuous Development (CI/CD)** using **Azure DevOps**, reducing deployment time by 40%.
- Used **LINQ** for data retrieving, querying, storage, and manipulation interface screens developed using **ASP.Net**.
- Added **Entity Framework** data models for our **Web API restful** service along with the appropriate controllers.
- Used **ADO.Net** to connect the web forms to data sources such as **MS SQL Server** and XML files for manipulating data in the database.
- Built and deployed a web application using **Python Flask** that processed customer feedback and stored data into a PostgreSQL database.

- Used **Python** scripts to automate backend data validation processes and schedule batch processing jobs via cron.
- Integrated **Flask** backend with Angular frontend to create a seamless client-server architecture for a prototype inventory system.
- Developed RESTful APIs using **Node.js** and **Express.js** to handle user authentication and data processing for an internal dashboard tool.
- Developed and deployed a microservices-based application using **Node.js** and **AWS**, improving system scalability and reducing deployment time by 40%.
- Created a lightweight backend using **Node.js** for a task-tracking application, utilizing JWT-based authentication and async API calls.
- Used **LINQ to build** a set of operations, parameters, and expressions during the execution of a set of data from **SQL Server**.
- Played a key role in migrating 10+ banking applications from legacy systems to **Azure-based microservices**.
- Prepare detailed **technical documentation** explaining architecture components and system workflow.
- Continuously monitor the changes in business activities if any and suggest management for software upgrade proposals to automate those activities.
- Participated in various Client meetings with the team and the Project manager to discuss improvements/ amendments in the development of the application using **Agile** Scrum Methodology

Environment: .Net 6/8, ASP.Net, C#.Net, ADO.Net, Web API, Angular 12, Angular.JS, MVC 5, HTML5, CSS3, XML, JSON, Entity Framework, WCF, WPF, LINQ, SQL Server and Windows.

Client: Caterpillar Financials, Nashville, TN.

May 2022 – Jun 2023

Role: .NET Developer

Responsibilities:

- Involved in the Software development life cycle (SDLC) of applications from the design phase to the implementation phase, testing, and Deployment phase.
- Designed and developed Web Forms using **ASP.NET and C#** and created necessary classes in the business components.
- Developed backend services using **Spring Boot** to handle user requests and perform business logic in a layered architecture.
- Created REST APIs with **Java** and **Hibernate**, integrated with MySQL for a customer order management system.
- Participated in migrating legacy backend code from .NET to **Java Spring**, enhancing performance and maintainability.
- Improved system uptime to 99.9% by implementing robust monitoring and logging solutions in **Azure**.
- Developed User Interface using **ASP.Net** and Code behind using **C#.Net**.
- Involved in developing applications in **C#** to meet business requirements using **Visual Studio**.
- Developed the data layer class using **C#** which is reusable for data transactions of the entire project.
- Developed business logic using **C#.NET**, and used the developed data layer class extensively for database-related transactions.
- Used **ASP.NET Core** built-in **Dependency Injection** to improve the performance and reliability of the application.
- Worked on **ASP.NET client-side state** management (view state, cookies, and query strings) and **server-side state management** (application state, session state, and profile properties) using **C#**.
- Used **ASP.NET Core** built-in **Dependency Injection** to improve the performance and reliability of the application.
- Implemented Microservices using **.Net Core** and implemented UI components using angular.
- Used Code first approach and **Entity Framework Core** for Data Access Layer (DAL).
- Defined and developed the application's presentation layer using **HTML5, CSS3, JavaScript, and JQuery** Scripting.
- Used **HTML 5** validations and new form element types to implement validation in **Angular. JS**.
- Built **Angular 12** components and UI services to consume the rest of services using Component-based architecture provided by **Angular 12**.
- Worked on **MS Visual Studio** and have end-to-end knowledge in the integration of **TFS**.
- Used **Windows Communication Foundation (WCF)** for multiple services to interact with the application for the clients.
- Implemented Microservices using **.Net Core** and implemented UI components using angular.
- Used Code first approach and **Entity Framework Core** for Data Access Layer (DAL).
- Used **Azure cloud services** like worker roles to perform heavy background tasks to make an application more responsive
- Used **Azure** storages as a blob and table storages to store images, complex files, and email templates.

- Used **Azure DevOps** for Repository and controlling the code without any conflicts, logging and monitoring tickets.
- Used **ADO.NET SQL Client** Objects like **SQL-Connection, SQL-Command, SQL-Data Reader** & object.
- Developed systems using .NET components and implemented the Data Access layers using **ADO.NET**.
- Responsible for designing the **Crystal Reports** for an administrator to track the sales and purchases, inventory, and purchase receipts.
- Implemented Data Access Layer using **Entity Framework and LINQ**.
- Designed, Developed, and Deployed reports in **MS SQL Server** environment using **SSRS**.
- Generated Sub-Reports, Cross-tab, Conditional, Drill down reports, Drill through reports and Parameterized reports using **SSRS**.
- Involved in creating Views, Stored Procedures, and Triggers and calling them from the Data Access Layer.
- Fixed the issues and bugs that occurred during the testing process.
- Implemented Agile-Scrum Methodologies in an iterative process of development.

Environment: C#.Net, ASP.Net, ADO.Net, Visual Studio, Entity Frame Work, WCF, WPF, HTML5, CSS3, JavaScript, Angular 10, Angular.js, Web API, RestFul, LINQ, SSRS, Crystal Reports, JQuery, JSON, SQL Server and Windows.

Client: Encompass Health, Birmingham, AL.

Jan 2021 – Apr 2022

Role: .NET Developer

Responsibilities:

- Participated in enhancements, and design reviews, and ensured design meets functional and operational needs.
- Involved in understanding user requirements, designed and developed web UI and back-end applications.
- Built numerous **C# UI** components and business modules using the **MVC 4.0** framework.
- Designed applications based on **MVC** and developed web pages using **ASP.NET, C#, and XAML**.
- Extensively used **LINQ** to create data entry web apps with **LINQ to SQL** to perform **CRUD** operations.
- Used **C#** and **ADO.NET** to implement secure middle-tier components using connected and disconnected environment strategies.
- Optimized database performance using Azure SQL and implemented caching mechanism with Azure Redis Cache, reducing data retrieval times by 85%.
- Designed and implemented components that convert disconnected record sets to valid **XML** that is transformed by **XSL/XSLT/XPATH** files to **HTML**.
- Used **N-tier architecture** for presentation layer, Business and Data Access Layers using **C#**.
- Involved in Coding and debugging using **ASP.NET** and **C#**.
- Developed web forms using **ASP.NET**, and **XML** server controls and validated client side using **JavaScript**.
- In the front end used **ASP.NET, CSS, and HTML** controls and for business logic used **C#.Net**.
- Created web services like **WCF**, and **REST full services** to make business transactions secure.
- Used **ADO.NET** to implement the data access layer.
- Managed containerized applications using **Docker** and **Kubernetes(AKS, EKS)**.
- Involved in coding the business logic layer and data access layer using **C#.NET**.
- Developed application in the data access layer using **ADO.NET**.
- Obeyed organization privacy policies and followed Windows authentication mechanism for successful Authorization and Authentication regarding the application.

Environment: .NET Framework, ASP .NET, MVC, Microsoft Visual Studio, C#, HTML5, XAML, CSS3, DDL, DML, LINQ, Entity Framework, TFS, Win Forms, SQL Server 2019, ADO .NET and Windows.

Client: Caesars Entertainment, Reno, NV.

Oct 2019 – Dec 2020

Role: .Net Developer

Responsibilities:

- Involved in developing applications completely under the **.NET framework** with **OOP's** concepts.
- Developed applications with strict compliance with **UML** Use Cases and Class Diagrams.
- Developed the UI using **Windows forms** and **Windows controls**. Used **Visual inheritance** in developing the forms.
- Designed and Developed Web Forms using **ASP.NET** controls, **C#, CSS3**, and **HTML5** to facilitate the registered user.
- Used **Custom Validation** and **User Validations**.
- Developed interactive pages of the application using **ASP.NET** Web Forms pages with **VB .NET** for the code behind modules.
- Implemented **MVC** architecture to accomplish the task of isolating the Business Layer, Presentation Layer, and Data Layer.

- I used **ASP.Net** for the front-end presentation and server-side processing.
- Involved in the transformation of **XML** data using **XSLT** into **HTML5** format.
- Created the database objects like Tables, Indexes, Views, stored procedures, etc.
- Developed custom **Data Grid** Column Style.
- Designed and developed custom user controls.
- Used **ADO.NET** to interact with **SQL Server** database.
- Used **ADO.NET** for the data access layer to communicate with the SQL Server 2012 database.
- Wrote **T-SQL** queries and Stored Procedures using MS SQL Server for data access and reports.
- Wrote queries, stored procedures, views, and triggers to support the application's functionality.

Environment: Microsoft .NET, C#.Net, ASP.Net, Win Forms, SQL Server, ADO.NET, UML and Windows.

Education Details: Bachelor's Degree In Electrical Engineering, Sree Vidyanikethan Engineering College
Tirupati, A.P, India-517001

2015-2019
