Summary

Data Analyst with **3 years** of experience in **data transformation, reporting, data analytics, and data visualization**. Expertise in **SQL, Python, Tableau, Power BI, and ETL processes**. Proven ability in analyzing large datasets, applying statistical models, and providing actionable insights that optimize business performance. Skilled in Python programming for data analysis, database management with PostgreSQL and Snowflake, and creating dynamic dashboards in Tableau and Power BI. Strong background in analyzing healthcare and business data, predictive modeling, and machine learning techniques. Experienced in collaborating with cross-functional teams to drive data-driven decisions.

Education

Master of Science in Health Informatics – University of North Texas, Denton, TX (May 2024) GPA: 3.90/4.00

Bachelor of Pharmacy – Jawaharlal Nehru Technological University, India (May 2021) GPA: 3.85/4.00

Technical Skills

Programming: Python, SQL, R, SAS

Databases: PostgreSQL, MySQL, Snowflake

Healthcare Standards: ICD-10, HL7, FHIR

Data Analysis: EDA, Statistical Analysis, Data Transformation, Feature Engineering, Predictive Modeling, Regression, Time Series Analysis

Visualization: Tableau, Power BI, Excel (Pivot Tables, VLOOKUP, Macros), SSRS

Platforms: AWS, Azure, Google cloud

ETL: AWS S3, SQL, Snowflake, Pandas, NumPy

Professional Experience

Data Analyst

Highmark Health, USA — Jan 2024 – Current

- Applied advanced **Python**, Pandas, and NumPy techniques to clean, transform, and reshape large datasets, improving analysis efficiency by **30%**.
- Converted **Excel** reports to **Power BI**, creating automated dashboards that reduced manual reporting time by **40%** and enhanced data accessibility.
- Designed dynamic **KPI dashboards** in **Power BI** and **Tableau**, enabling real-time insights and faster strategic decision-making for stakeholders by reducing manual reporting time by **40%**.
- Worked closely with clinical and IT teams to ensure alignment with **FHIR** and **HL7** interconnection protocols.
- Performed statistical analysis using **Scipy** and **Statsmodels**, uncovering trends that supported key business and operational improvements.
- Managed end-to-end **ETL workflows** using **Snowflake**, **SQL**, and **AWS S3**, delivering secure, scalable data pipelines and reducing processing errors by **20%**.
- Analyzed high-volume data from **CRM systems** and **BigQuery**, maintaining data accuracy and enabling data-driven **sales** and **marketing** strategies.
- Developed **SQL/PostgreSQL** scripts and advanced **CQL queries** to extract, filter, and aggregate data across distributed systems, improving query performance by **25%**.
- Partnered with **cross-functional teams** to integrate new data sources, ensuring **data integrity** and increasing reporting reliability across departments.

Data Analyst

Aster CMI, Bengaluru, India — Jan 2021 – Jun 2022

- Conducted comprehensive **business analysis** by collaborating with stakeholders to define **reporting objectives**, identify **data solutions**, and streamline decision-making processes, leading to a **20%** boost in operational efficiency.
- Queried and managed large datasets using **SQL** and **SQL Server**, ensuring **data accuracy**, consistency, and integrity across critical business systems.
- Applied **statistical analysis**, **mathematical modeling**, and **data mining** techniques to identify trends and patterns in structured and unstructured data, driving data-backed strategic decisions.
- Ensured full **HIPAA** and **HEDIS** compliance when handling sensitive healthcare data from **EHR systems** like **Epic** and **NextGen**, supporting regulatory audit readiness and secure data reporting.
- Built automated workflows integrating **Python** with Tableau Server/Desktop, streamlining scheduled data refreshes and reducing manual reporting tasks by **50%**.
- Aggregated and analyzed clinical, quality, and financial healthcare data to extract actionable insights and enhance healthcare outcomes and reimbursement models.
- Created intuitive and insightful visualizations and **dashboards** using **Power BI** and **Tableau**, enabling leadership to monitor **KPIs** and improve performance tracking.
- Integrated **Software Development Life Cycle (SDLC)** best practices into data analysis projects, enhancing project predictability and reducing development rework by **15%**.
- Extracted insights from complex datasets using **text mining** and **natural language processing**, uncovering customer sentiment trends that informed marketing strategies and increased engagement by **18%**.

Academic Projects

Healthcare Fraud Detection System

- Analyzed insurance claims and billing data to identify inconsistencies and potential fraud patterns, improving **data quality** and **transparency**.
- Utilized **SQL** and **Python** for **data cleaning**, **pattern detection**, and **anomaly identification** across large healthcare datasets.
- Collaborated with compliance teams to ensure **HIPAA compliance** and regulatory standards.

Clinical Outcomes Dashboard

- Created a real-time **Tableau dashboard** to monitor **patient outcomes** and key clinical performance indicators across departments.
- Extracted and joined data from **EHR systems**, ensuring accurate visualization of **patient care trends**.
- Reduced manual reporting efforts by **40%** by automating the reporting process.

Predictive Model for Hospital Readmissions

- Built a **predictive model** using **logistic regression** and **decision trees** to predict patient readmission risk, achieving **80% accuracy**.
- Worked with **clinical teams** to validate findings and create actionable insights for improving **patient care**.
- Used **Python**, **Pandas**, and **Scikit-learn** for model development and evaluation.
