

Nabeel Raheem

Email: nabeelraheem35@gmail.com Cell: (316) 376-6608 Portfolio: <https://nabeelraheem.github.io/>

Technical Skills:

Business intelligence tools: Tableau (Desktop & Prep), Power BI (Dax measures), Looker, Google Analytics.

Data processing and ETL: Talend, Informatica, AWS Glue, AWS Lambda.

Database management: MySQL, MSSQL Server, MS Access, PostgreSQL, Oracle.

Software: Python (Pandas, NumPy, Matplotlib), AWS, MS Office Suite, Excel, Jira, Qualtrics, SAP, SAS, Visio, draw.io, Google ads, Facebook ads.

PROFESSIONAL EXPERIENCE

Insolg - Data Analyst (Bingham Farms, MI) Oct 2024 - Present

Working as a Data Analyst for Intelligent Solutions Group Corporation's client, BioPrecision Labs, a rapidly growing diagnostic laboratory serving the Greater Detroit area and beyond, I manage and analyze diagnostic test data to uncover trends and ensure accuracy. My role involves cleaning and integrating diverse datasets into Data marts and centralized Database and developing performance-driven dashboards and reports.

Centralized Dashboard for Diagnostic Test

- **Description:** Analyzed historical diagnostic test data to discover patterns in the results. This involved understanding variances in test outcomes based on patient demographics and testing conditions. The goal was to create a managed dashboard that shows key performance indicators (KPIs) for the accuracy and precision of diagnostics.
- **Key Action:** Gathered and integrated diagnostic test data using SQL queries and Talend into a centralized database. Conducted exploratory data analysis with NumPy, Pandas, and Matplotlib to identify major factors impacting performance. Developed performance metrics by defining KPIs and utilized SQL and Python to calculate diagnostic accuracy and turnaround times. Ensured data quality and integrity through validation checks and protocols, reducing errors during analysis and reporting.
- **Outcome:** Created a centralized dashboard using Power BI to visualize diagnostic test patterns and KPIs, reducing manual reporting time and providing real-time insights. This dashboard was used to drive weekly governance meetings, helping the team focus on priority areas and enhancing overall efficiency.

Exploratory Data Analysis for Diagnostic Performance

- **Description:** Analyzed diagnostic test data to identify trends, uncover hidden patterns, and understand performance determinants. Collaborated with the team to present actionable insights that supported strategic decision-making and helped improve diagnostic accuracy and efficiency.
- **Key Action:** Performed exploratory data analysis using NumPy, Pandas, and Matplotlib to identify key factors affecting diagnostic performance and trends. Applied clustering techniques to group results and uncover meaningful patterns. Leveraged Python for creating visualizations to highlight variances in historical data, focusing on patient demographics and testing conditions. Defined KPIs and utilized SQL and Python to evaluate diagnostic accuracy, turnaround times, and operational efficiency, providing valuable insights to enhance overall performance.
- **Outcome:** Provided actionable insights into diagnostic trends and patterns, enhancing strategic decision-making and operational improvements. Highlighted key performance determinants through statistical

analysis and visualizations, contributing to a better understanding of diagnostic accuracy and efficiency.

Data Integration and Quality Assurance

- **Description:** Contributed to the development of a centralized system for diagnostic test data integration, focusing on improving accessibility and ensuring data consistency. Played a key role in standardizing diverse datasets and maintaining high data quality standards, which supported accurate analysis and reliable reporting.
- **Key Action:** Used SQL queries and Talend to gather and integrate diagnostic test data into a centralized database, making the data accessible for analysis. Focused on improving data quality by setting up validation checks and protocols in SQL to ensure accuracy and reliability. Carried out thorough data checks to reduce errors during analysis and reporting, leading to more trustworthy insights.
- **Outcome:** Supported the creation of a centralized database that improved data accuracy and reliability, reducing analysis errors by 20% and streamlining reporting processes. Played a key role in ensuring consistent and accessible data for analysis, contributing to enhanced operational efficiency.

Insolg - Data Analyst Intern (Wylie, TX)

March 2024 - Sep 2024

As a Data Analyst Intern at Intelligent Solutions Group Corporation (Insolg), I was responsible for building data pipelines using Talend, cleaning and aggregating data, and creating dashboards with SQL, Python, and Power BI to enhance accessibility and support decision-making for their client supply chain, finance, and operations teams.

Enhanced Data Accessibility and Real-Time Reporting

- **Description:** Designed an efficient data pipeline using Talend to automate ETL into a centralized database, enhancing business tracking through real-time dashboards and actionable reports.
- **Key Action:** Built a scalable ETL data pipeline using Talend to integrate CSV, Excel, and SQL files. Created interactive dashboards and automated reports in Power BI and Tableau to monitor KPIs. Ensured seamless data management with MySQL and PostgreSQL.
- **Outcome:** Improved data accessibility and reporting efficiency for supply chain and finance teams, enabling them to act on performance metrics faster and with greater accuracy.

Visualtech.ai - Data Analyst (Wylie, TX)

Feb 2024 - March 2024

As a Data Analyst at Visualtech.ai, I supported their client's marketing and finance teams by creating Tableau dashboards, analyzing data with SQL, Pandas, and NumPy, and managing data using AWS S3. My work provided actionable insights, improved KPI tracking, and enhanced decision-making.

Business Intelligence Dashboard Development and Data Analysis

- **Description:** Designed and developed a business intelligence dashboard to provide insights, enabling data-driven decision-making. Improved performance tracking and strategic planning for better operational efficiency.
- **Key Action:** Developed dashboard and reports in Tableau Desktop to visualize trends and track KPIs. Used Pandas, NumPy, and SQL queries for data analysis. Managed and processed data using AWS S3 for efficiency.
- **Outcome:** Delivered visually compelling dashboard and insights that empowered stakeholders to make informed decisions, improve performance tracking, and optimize business operations.

POET - Business Support Analyst Intern (Wichita, KS)

May 2023 - Aug 2023

As a Business Support Analyst Intern at POET, the world's largest producer of biofuels and a pioneer in sustainable

bioproducts, I was responsible for supporting supply chain, finance, and marketing operations. My role involved developing automated dashboards in Power BI to track supply chain load movements and KPIs, designing efficient ETL pipelines with MS Power Query, and using SQL for data extraction. These initiatives enhanced data visibility, improved reporting efficiency, and supported data-driven decision-making for operational optimization.

Real-Time Supply Chain Load Monitoring System

- **Description:** Developed and automated real-time dashboards to streamline railroad and UT train tracking for the supply chains department. Focused on improving operational visibility and enabling data-driven decisions.
- **Key Action:** Extracted data from a centralized database using SQL queries. Designed interactive dashboards in Power BI with DAX measures to monitor load movements, track KPIs, and analyze supply chain performance.
- **Outcome:** Improved load tracking efficiency by 70%, enabling stakeholders to optimize logistics operations and make timely, data-driven decisions.

Data Pipeline and ETL process improvement

- **Description:** Designed a data pipeline to enhance data management and reporting efficiency for finance and marketing teams. Ensured smooth data integration and reporting processes.
- **Key Action:** Utilized MS Power Query for the ETL process to feed data into an MS Access DataMart. Created Power BI reports to provide actionable insights, increasing the accuracy and utility of data reports.
- **Outcome:** Improved data visibility and management by 15%, enabling better strategic planning and performance tracking across finance and marketing teams.

Indus Valley Crafts - Data Analyst

May 2020 - June 2021

As a Business Data Analyst at Indus Valley Crafts, a manufacturing company specializing in pink salt products, I was responsible for expanding international markets by leveraging tools like Google Analytics and Tableau. My duties included optimizing marketing campaigns, managing data with MS SQL and Excel, and collaborating with teams which resulted in a 10% customer growth and a 15% increase in sales.

International Market Trends and Sales Analysis

- **Description:** Utilized data analysis, Google Analytics, Google and Facebook Ads to identify and identify new client demographics and market trends in Germany, France, and Japan. Focused on expanding the customer reach and increasing sales in emerging markets based on insights and hidden trends derived from market analysis.
- **Key Action:** Optimized the email and website campaign after analyzing the customer demographics and sales data sets, achieving a 20% increase in customer response and a 7% rise in click rates. Used Google Analytics to monitor campaign performance and extract insights. Generated business intelligence reports using Tableau and utilized SQL and advanced Excel for data transformation, delivering actionable insights to enhance market strategies and performance tracking.
- **Outcome:** Achieved 20% increase in customer response rates, 7% higher click rates, a 10% growth in customer base and a 15 boost in sales. Leveraged descriptive and statistical techniques to guide decision making and drive revenue growth in international markets.

Education:

- **Master of Science in Business Analytics** (Global Select Scholarship) Wichita State University (Wichita, KS)
- **Bachelor of Business Administration** (Marketing) University of the Punjab
