

Neeraja Gude

Cloud Data / Business Analyst / Analytics Engineer- (DataOps)
Pittsburgh, PA, 15108 | (470-820-9695), neerajagude20@gmail.com
<https://www.linkedin.com/in/neeraja-gude/>

SUMMARY:

- Over 7 years of professional experience as a Business Analyst and Quality Analyst, specializing in documenting Business and Functional Requirements, Technical Specifications, User Guides, and Requirement Traceability Matrix across the Software Development Life Cycle. Expertise in evaluating, implementing, and optimizing grant management systems to enhance transparency, reporting, and user experience.
- Strong experience with Agile Scrum practices, including Scrum teams, sprint planning, product backlogs, retrospectives, daily standups, and burn-down charts.
- Expertise in facilitating Joint Requirement Planning (JRP), Joint Application Development (JAD), and Rapid Application Development (RAD) sessions, collaborating with stakeholders, business users, and subject matter experts (SMEs) to gather business requirements.
- Skilled in creating key documentation such as Business Requirements Documents (BRD), Functional Requirements Documents (FRD), Functional Specifications (FSD), Use Case Specifications, User Stories, and **Standard Operating Procedures (SOPs)**. Proficient in performing Gap, Cost-Benefit, Risk, Impact, and Feasibility Studies. Proficient in Jira and Confluence for project management, collaboration, and documentation.
- Experience in grant administration, streamlining processes, ensuring compliance, and optimizing grant programs. Capable of developing clear, traceable requirements using techniques like interviews, workshops, surveys, site visits, and workflow analysis.
- Skilled in Python for both data analysis and testing workflows: used Pandas, NumPy, and Scikit-learn for feature engineering and churn prediction modeling; leveraged Matplotlib and Seaborn for visualizations; and applied Python in manual/automated testing for API payload validation and regression.
- Skilled in MS Office tools (Excel, Word, PowerPoint) for organizing, analysing, and presenting data effectively.
- Conducted functional, regression, and user acceptance testing (UAT) to ensure business requirements are met before deployment, and managed changes in Salesforce configurations, features, and updates to minimize disruptions.
- Strong SQL expertise in writing complex queries, joins, aggregations, CTEs, and subqueries for analytics and modeling. Experienced in data profiling, cleansing, and optimization of SQL-based ETL pipelines in collaboration with backend teams.
- Worked on **API-integrated data pipelines** that pulled SQL-based data from backend sources into **AWS Glue jobs** and **Power BI reports**.
- Experienced in using Power BI/Tableau for data visualization and creating actionable insights, as well as Visio and **Lucid chart** for designing process flows, system workflows, and diagrams to represent complex systems and processes. Proficient in Azure DevOps, managing work items such as Epics, Features, User Stories, Tasks, Bugs, and Test Cases.
- Managed incident and defect tracking using ServiceNow and Azure DevOps.
- Documented change requests and enhancements, followed through full lifecycle tracking.
- Experience working with process improvement initiatives and compliance reviews.
- Strong knowledge of PMBOK and Agile Scrum principles.
- Experience in oversight reviews and solution integrity assurance.
- Proven experience supporting **Customer Success** initiatives by driving user adoption, gathering feedback, and enabling data-driven decisions to improve client retention and renewals.
- Adept at mapping out grant administration workflows, identifying inefficiencies, and implementing process improvements for enhanced efficiency and effectiveness. Committed to accessibility standards in design for users with disabilities.
- Strong cross-functional collaboration skills across product, engineering, and customer-facing teams.
- Experience working with process improvement initiatives and compliance reviews and experience in oversight reviews and solution integrity assurance.
- Experience in developing low-fidelity and high-fidelity wireframes using tools such as Lucid chart, Figma, and Miro to visualize user interactions and design solutions effectively.
- Collaborated with UI/UX teams to translate business requirements into intuitive interface designs, improving user satisfaction and application usability.

EDUCATION & CERTIFICATIONS:

- Robert Morris University, Pittsburgh, PA
 - Master’s in management and information systems
- MVJ College of Engineering, Bangalore, India
 - Bachelor’s in computer science and engineering

SKILLS:

Core Competencies	Tools & Technologies
Machine Learning & Predictive Modeling	Python, (Scikit-learn, statsmodels), Jupyter Notebooks
ETL & Data Pipeline Development	PySpark, dbt, AWS Glue, Python scripts for transformation/ validation
Product Management	Jira
Requirement Gathering and Analysis	SAP, Confluence, AWS, Azure DevOps, Salesforce
Project Coordination	MS Office
Data Analysis & Querying	SQL, PostgreSQL, Python
API Management & Testing	RESTful API, API Testing
Data Visualization & Reporting	Power BI, Tableau
Agile & Scrum Framework	Jira, Azure DevOps, Confluence
Process Modeling & Workflow Automation	Visio, Figma, SOP, Lucid chart
Application Monitoring & Logging	Splunk, Grafana, Prometheus

PROFESSIONAL EXPERIENCE:

Cigna Health Care
Business Analyst, CT

Jul 2024- Present

Description: A streamlined one-stop digital hub for residents to easily manage their interactions with the State. From renewing insurance and making payments to setting appointments, getting notifications, and staying informed, Costumers can reduce the hassle and manage state services all in one convenient place.

Responsibilities:

- Creating and reviewing Epics, User Stories, Tasks, and Sprint reviews by partnering with product owner, architects and Developers to define project scope using Salesforce and MuleSoft technologies.
- Collaborating with stakeholders to document detailed business requirements for PowerApps, Power Automate, Salesforce, and MuleSoft solutions along with defining API structures and data flows.
- Develop and execute test plans, test cases, and test scripts based on project requirements and specifications.
- Perform manual testing for functional, regression, and user acceptance tests (UAT), facilitated training sessions, improving system adoption and user satisfaction by 40%.
- Identify, document, and track defects in the bug-tracking system e.g., Jira.
- Retest the software after bugs are fixed and ensure that no new issues are introduced.
- Collaborate with development teams to troubleshoot, reproduce, and resolve defects.
- Utilizing JIRA for maintaining Agile/Scrum product backlogs and tracking project progress in Salesforce and MuleSoft projects.
- Assisted in prioritization of user stories, ensuring alignment with business needs and sprint commitments.
- Analysed and documented existing and proposed business processes to streamline workflows and improve performance.
- Developed ETL workflows using Python and PySpark to process large data, aligning with the role's requirement to support system enhancements to deposit insurance calculators, process and optimize performance for Data ingestion and Cleaning and transformation steps.
- Used Python (Pandas, NumPy, Scikit-learn) in the Customer Churn Prediction to perform feature engineering, model development, and evaluation.
- Develop and test API requests for data retrieval, updates, deletions, and insertions between Salesforce and MuleSoft.
- Consulted with management on system principles and best practices to enhance operational efficiency.
- Translating business requirements into functional specifications and technical documentation for Salesforce, MuleSoft, and ForgeRock IAM.
- Led requirements gathering, management, and analysis through user interviews, JAD sessions, and business process modelling, reducing requirement gaps by 35%.

- Configuring Salesforce objects, fields, page layouts, workflows, and automation rules to meet business needs and processes.
- Tracked and documented Epics, Features, User Stories, and Test Cases in Azure DevOps, supporting full Agile lifecycle from requirements through QA and deployment.
- Wrote and optimized complex SQL queries to extract, transform, and analyze large datasets for reporting, decision-making, and QA validation efforts.
- Partnered with Product Owners, Developers, and Architects to define project scope using Salesforce, Mulesoft.
- Documented business requirements, API data flows, and created Standard Operating Procedures (SOPs) for system workflows and user interactions.
- Designing SharePoint site architectures, information architectures, and workflows for systems integrated with Salesforce and MuleSoft leveraging APIs.
- Collaborated with product and customer success teams to track **client satisfaction, usage trends, and onboarding success** for healthcare software solutions.
- Gathered user feedback and pain points, relaying insights to development teams for continuous product improvement, boosting client retention.
- Contributed to quarterly business reviews by preparing KPI reports, helping **account managers with renewal strategies**.
- Delivered clear and concise documentation, presentations, and reports to stakeholders at all levels, increasing stakeholder engagement by 50%.
- Led UAT sessions and manual testing, improving system adoption and user satisfaction by 40%.
- Built detailed **Lucid chart** diagrams for system architecture, API data flow, and process modeling, improving cross-team communication by 35%.
- Utilized Lucid Chart and Visio to create detailed process flow diagrams, system workflows, and data models to support business analysis and process improvement initiatives.
- Designed low-fidelity and high-fidelity wireframes to capture UI requirements and stakeholder expectations for new modules integrated with Salesforce and MuleSoft.
- Creating detailed project documentation and reports outlining objectives, scope, costs using Moday.com and Confluence.
- Worked closely with product owners and front-end teams to ensure wireframes aligned with end-user usability goals and brand standards.

Cloud Secure Technologies

Oct 2019- May 2023

Data Analyst

Description: Worked across various domains including grants management, healthcare, finance, education, and non-profit organizations. My experience spans developing and optimizing systems for grant application reviews, patient care management, financial transactions, government services automation, learning platforms, and more.

Responsibilities

- Collaborated with stakeholders to gather, document, and translate business requirements for PowerApps, Power Automate, Salesforce, AWS API Gateway, and grant systems, ensuring alignment with objectives.
- Defined and managed Agile/Scrum backlogs using Azure DevOps and JIRA, while conducting Sprint Retrospectives to improve processes.
- Enhance system observability by assisting in the implementation of monitoring and logging tools such as Splunk, Grafana, Prometheus, Dynatrace, Elasticsearch, and App Insights, improving performance insights and issue detection.
- Designed and developed solutions including PowerApps workflows, Salesforce customizations, AWS API Gateway integrations, and SharePoint architectures based on business needs and technical feasibility.
- Conducted in-depth analysis of grant programs and systems to identify improvements and propose technology solutions for streamlining application, approval, and monitoring processes.
- Created user personas, use case documents, process flowcharts, and technical documentation to represent user requirements and optimize workflows.
- Integrated AWS API Gateway with backend services to enable secure, scalable, and efficient API management for service requests and transactions.
- Used Python to build **data transformation pipelines** that ingest, clean, and normalize raw financial and operational data from multiple sources (CSV, SQL databases, APIs).
- Automated queries and report generation using Python scripts, reducing manual overhead and improving accuracy.
- Leveraged **Python scripting** to automate data validation, preprocessing, and generation of reports for grant and healthcare.
- Processed structured financial datasets in Python for tasks such as customer segmentation, balance categorization, and transaction trend analysis – supporting logic used in financial services environments like FDIC compliance.
- Wrote **custom Python scripts to automate routine analytics tasks**, such as generating weekly reports, updating data catalogs, and syncing source data with cloud storage.

- Collaborate with development teams to ensure seamless integration with MS SQL and PostgreSQL focusing on data modelling, query optimization, and performance improvements.
- Work closely with DevOps teams to streamline Azure DevOps (ADO) workflows, optimize application containerization, and manage deployment strategies across diverse environments.
- Created process maps and modelled current-state and future-state workflows using Microsoft Visio and Lucidchart to support system redesign and automation planning.
- Developed user guides, training materials, and project reports to ensure effective adoption of new solutions and processes.
- Authored **Standard Operating Procedures (SOPs)** for new system deployments and maintenance processes, ensuring smooth transitions and compliance.
- Configured Salesforce objects, fields, page layouts, and workflows, ensuring alignment with business needs and enhancing system efficiency.
- Served as a subject matter expert to guide strategy, planning, and project execution, promoting best practices and coding standards across all solutions.
- Supported Agile development teams by refining backlog, writing user stories, and conducting sprint planning, resulting in 15% faster sprint completion.

Tata Teleservices Ltd. India

Feb 2017 – Nov 2018

Business analyst

Description: The assigned health care project was to build a system to support Functionality: ability to create and manage electronic health records (EHR) for all patients, as well as automating workflow in a physician's office. Interoperability: ability to receive and send electronic data to laboratories and Security: ability to keep patients' information safe and analysed, wrote, tested, ran and maintained computer programs for the import of data from external sources into the clinical database system.

Responsibilities:

- Developed use case scenarios and created class diagrams, ER diagrams, and SQL queries to map data and support application design using SDLC methodologies.
- **Developed Python scripts to automate data imports and validation** for clinical database systems, ensuring secure and accurate integration of electronic health records (EHR) from external sources.
- Managed stakeholder relationships configured permissions in Confluence and ensured proper access control for secure project collaboration.
- Designed process maps and workflow diagrams to visualize lifecycle and optimize decision-making across projects.
- Prioritized user stories, coordinated with stakeholders, and collaborated with technical teams to configure CMS settings and ensure alignment with business needs.
- Worked in Agile environments to prioritize and manage project timelines and collaborated with compliance officers to ensure regulatory adherence in projects.
- Created wireframes, prototypes, and reports for Epic billing data, ensuring accurate billing and maximizing benefit claims while supporting the implementation of the Patient Management System.

Certifications:

- AWS Certified Cloud Practitioner
- Google Data Analytics Certification
- dbt Fundamentals by dbt Labs
- Salesforce Administrator
- Microsoft Certified: Power Platform Fundamentals
- Currently preparing for CBAP/CSM certification
