SUMMARY:

IS graduate with strong foundation and had 2 years of experience in SQL, PostgreSQL, PL/SQL, and Power BI, skilled at translating complex business needs into efficient technical solutions. Experienced in conceptualizing and executing projects, with a focus on seamless integration and problem-solving. Seeking entry-level software engineering roles in tech-driven firms.

EDUCATION

University Of Memphis, Memphis (3.73 GPA)

Expected Jan 2025

Master of Science, Information systems

Coursework: *Software Engineering, Machine Learning, Artificial Intelligence, and Database Systems.*

Chaithanya Bharathi Institute of Technology-Hyderabad

May 2020

Bachelor of Production Engineering

Coursework: C, C++, Tableau, machine drawing, data pipelines

TECHNICAL SKILLS

Languages : SQL, PostgreSQL, PL/SQL, Excel, basics of R, basics of Java, Python

Data Visualization : Tableau, Power BI, Python, R

Tools : Amazon web services, Google cloud platform, GIT

Databases : Oracle, MS office, MySQL

Web Technologies : Html, CSS.

Data Management : data extraction, data procedures, Data Quality, Data Modeling, SQL, NoSQL, Data Warehousing

PROFESSIONAL EXPERIENCE

Vitech Systems Asia Pvt.Ltd India (2021-2023) headquarters in New jersey

Dec 2020 – Dec 2022

Database developer

PROJECT: SCERS, HIERS, CFAO, 32BJ

- Debugging the issues reported by client based on the business requirements and fixing the codes
- Worked on Documents module by analyzing the issue reported and fixing the documents (Including the document extractions)
- Worked on scripts (writing queries) for several data fixes required by management.
- Familiar with SQL and PL/SQL and PostgreSQL concepts with knowledge of debugging and creating the procedures and functions.
- Writing SQL queries to pull the data for the given requirement.

INTERNSHIP

- **Air Brake Systems**

17th June,2019-1st July,2019

The intern was done at Coaching Depot Hyderabad, central Railways. How Air Brakes mechanism works in trains and functionality and Mechanism of Air Brakes And live functionality of trains and spare parts for airbrakes and coordinated with depot and tested along with Depot.

- **Coupons Generation System**

28th May,2018-22nd June,2018

The proposed web-based coupon management system enables businesses to attract new customers by offering discounts through paid coupons, which can be redeemed at merchant locations. Previously, businesses relied on free coupons that lacked revenue generation and customer interest. By integrating Power BI, the system imports and transforms data, analyzes coupon effectiveness, and monitors redemption patterns. It provides actionable insights for future campaigns, allowing businesses to make data-driven decisions to enhance promotional strategies and improve customer engagement.

PROJECTS

- **Project Title:** “PLANT DISEASE DETECTION”
Development frameworks: Tensor flow
Operating systems: Android, IOS, Windows, MacOS
Programming languages: Java and Python
Integrated development env: android studio, Visual studio
Description: **Plant Disease Detection using Convolutional Neural Network** user-friendly platform using An Android app, developed with TensorFlow Lite in Android Studio, uses machine learning to diagnose plant diseases from images, offering treatment suggestions and fertilizer recommendations while aiming to improve accuracy and real-time monitoring.
