SUMMARY

I am an emerging software engineer with experience in Spring Boot and Vue.js. I have experience working in B2B SaaS with foundations in RESTful API's, Full Stack Development, and core software engineering principles. With a friendly disposition and good work ethic I am open to all new opportunities!

WORK EXPERIENCE

Software Engineer I: July 2024 – September 2025

Matium (Remote)

- Work on both frontend and backend solutions for B2B SaaS market web app.
- Utilize Vue.js and Spring Boot with optimized performance and scalability.
- Implement full stack features using Vue, Spring Boot, Mapstruct, Liquibase, Pinia, Storybook, PrimeVue, I18n, Tailwind SCSS, AWS, and more!
- Built multiple custom core features and components and developed the base line product pitch for a communication app called Matium Carrier

Software Engineer / Game Developer: September 2021 – present

Oasis Network LLC (Self Employed)

- Create games and game-related content in C# using Unity.
- Create RESTful web apps with Spring Boot and Vue.js.
- Manage project timelines and set goals for development.
- Deploy web apps using Heroku, AWS, and Netlify.
- Distribute games to content platforms such as Steam, the Apple App Store, and the Google Play Store.
- Promote games and content using social media platforms like TikTok, Instagram, and Youtube. Keep detailed record of company spending for tax purposes.

TECHNICAL SKILLS

- **Software Development Tools:** Spring Boot, Vue.js, FastAPI, AWS, OpenAI API, TypeScript, Storybook Documentation, Liquibase, Maven, Gradle.
- **Productivity Tools:** Git, GitHub, Linear, Notion, Jira, Microsoft Office Suite.

PROJECTS

Conduit Servers (<https://conduitservers.com>)

- Full stack web application built using Spring Boot and Vue.js.
- Allows video game owners to list their content on the app and be seen by users with live status checks. user voting with in-game rewards communicated via web socket.
- Deployed to Heroku and Netlify with images stored in an AWS S3 Bucket.

Matium Carrier

- Hackathon project developed while working for Matium using Spring Boot and Quasar.
- Allows users to communicate via text with real time updates communicated using Pusher, and real time voice communication (VOIP) using Twilio.
- Deployed to the iOS App Store and Heroku with images stored in an AWS S3 Bucket.
