

Oladiran Jejenwa.

Senior Data Analyst | Data Engineer | Data Scientist

7+ years of experience in data analytics, engineering, and insights-driven decision support

 peter_jeje@outlook.com |  Texas, United States |  (248) 602-6713 |  [LinkedIn](#) | [Git](#)

Skills

Programming & Scripting:

SQL | Python | R | PL/SQL | DAX | SSIS | MySQL | Bash | Statistical Modelling | Data Mining | ETL Development | Scikit-learn | Pandas | NumPy | Matplotlib | Seaborn

Cloud, Tools & Platforms:

Power BI | Tableau | QlikView | Excel | Microsoft Access | SSRS | Power Automate | RPA | Oracle | Azure | AWS | Snowflake | Big Query | MySQL Workbench | Git | Docker | Airflow

Technical Areas & Systems:

Data Warehousing | Data Modelling (Star Schema, OLAP, Snowflake Schema) | Data Cleaning | KPI Reporting | EDI Transactions | HIPAA Compliance | A/B Testing | Business Intelligence | SDLC (Agile, Scrum, Waterfall) | Exploratory Data Analysis | CI/CD | Model Deployment | Dashboard Design | Stakeholder Engagement

Education

Western Governors University (WGU.) – MBA. IT Management

The University of Texas, McCombs School of Business — Post Graduate Program in Data Science and Business Analytics.

The Federal University of Technology — B.Tech. Physics (Electronics).

Professional Experience

08/2022 – 07/2026 | Senior Data Analyst

Stellantis – Detroit, United States

- Led analytical initiatives and developed data models that drove business strategy across departments
- Created scalable ETL pipelines and data validation scripts using SQL and Python
- Designed advanced dashboards in Power BI with dynamic filters and drill-through pages
- Applied statistical techniques and machine learning models (e.g., regression, classification) using Python
- Optimized reporting layers using dimensional modelling and DAX calculations
- Collaborated with cross-functional teams to track KPIs and build forecasting models
- Implemented CI/CD pipelines for automated data pipeline testing and dashboard deployment
- Developed A/B tests to evaluate campaign effectiveness and operational changes
- Built and maintained Airflow DAGs to automate and schedule data workflows
- Managed data security and governance protocols across enterprise datasets
- Delivered executive reports, summarizing key trends, insights, and actionable recommendations

10/2020 – 07/2022 | Data Analyst

Health Equity – Utah, United States

- Translated business goals into analytical hypotheses and constructed predictive models using Python
- Extracted and transformed large datasets into reporting tools for finance and operations
- Built interactive Tableau dashboards and data apps for real-time decision making
- Implemented ETL pipelines using SSIS, automated nightly data refreshes and quality checks
- Developed anomaly detection scripts to catch operational inconsistencies in key metrics

- Modelled structured and unstructured data into data marts using star and snowflake schema
- Conducted statistical analyses and visualized findings using Pandas, Matplotlib, and Seaborn
- Integrated Snowflake cloud warehouse for centralized reporting
- Partnered with DevOps teams to align data infrastructure and cloud deployments
- Built APIs for real-time metric serving in internal applications
- Presented insights to C-suite to support cost reduction and strategic expansion decisions

07/2018 – 09/2020 | Data Analyst

Detroit Medical Center – Detroit, MI, United States

- Developed and optimized clinical KPIs using Power BI and SQL stored procedures
- Built predictive models for readmission risk using scikit-learn and logistic regression
- Led HIPAA-compliant data handling for Medicare and Medicaid datasets
- Performed multivariate regression to evaluate treatment outcomes and healthcare efficiency
- Maintained Oracle databases with performance tuning and indexing improvements
- Built ETL workflows integrating EHR, claims, and pharmacy data
- Collaborated with clinical leaders to define program effectiveness metrics
- Created dashboards for real-time operations and trend analysis
- Conducted regular audits of clinical data pipelines for integrity and compliance
- Mentored junior analysts and provided code reviews for SQL and Python projects
- Supported research projects with statistical modelling and visualizations

01/2015 – 06/2018 | Data Analyst / BI Developer

AGYLE Network – Plano, Texas, United States

- Designed enterprise-level ETL pipelines using SSIS and Azure Data Factory
- Performed predictive analytics using machine learning algorithms on large retail datasets
- Built custom dashboards in Tableau and Power BI to track consumer behaviour and trends
- Developed Python scripts for data cleaning, transformation, and exploratory analysis
- Performed time-series forecasting using ARIMA and Prophet models
- Created reconciliation processes to detect and fix data mismatches across legacy and modern systems
- Built CI/CD pipeline to automate testing of analytical data transformations
- Integrated real-time data streaming pipelines with Kafka (simulated environments)
- Documented all data flows, metadata, and data lineage for compliance
- Worked with marketing to identify high-conversion segments using clustering techniques
- Led stakeholder workshops to demo dashboards and define success metrics

Certifications

Microsoft Technology Associate (Database) | Scrum Master Certified (SMC) | Microsoft Certified: Power BI Data Analyst Associate | Microsoft Certified: Azure Administrator Associate

Accomplishments

- Built predictive models that improved marketing campaign ROI by 23% using classification algorithms.
- Reduced report generation time by 60% by automating ETL and dashboard refresh pipelines.
- Increased clinical program efficiency by 18% through readmission prediction models and KPI tracking.
- Implemented Airflow for ETL orchestration, reducing pipeline failures by 40%.
- Created executive dashboards used by C-levels across 3 organizations to drive decisions.
