PROFESSIONAL CERTIFICATIONS

EXECUTIVE SUMMARY

Salesforce Developer with over 5+ years of experience building enterprise-grade Salesforce applications, including Revenue Cloud implementations and AI-powered solutions using Agentforce. Experienced in designing custom AI agents, implementing advanced CPQ configurations, and automating complex billing and revenue lifecycle workflows. Proficient in Apex, Lightning Web Components (LWC), Flows, and OmniStudio, with exposure to LLM integrations (GPT-4, Claude) and Revenue Cloud optimization.

PROFESSIONAL EXPERIENCE

FORSYS INC Software Engineer | Jul 2024 – Present

Austin, Texas • Complete Python • React.js • Node.js • LLM APIs • Machine Learning • Web Scraping • AWS • Docker • CI/CD

- **Key Clients:** DigiCert (Enterprise Security SaaS) | Hitachi Vantara (Enterprise Data & Infrastructure company) | EJM(Aircraft Managment & Private Jet Charter)
- Architect and design highly scalable full-stack web applications: Engineered enterprise-grade backend services and modern frontend interfaces with cloud-native architecture to support thousands of concurrent users while maintaining high availability, performance, and reliability across microservices infrastructure.
- Master development process and culture: Demonstrated deep understanding of full-stack development lifecycle, design patterns, and best practices across multiple tech stacks. Actively contributed to improving development processes—code review standards, deployment runbooks, documentation practices—and collaborated with cross-functional engineering teams on backend and frontend optimization.
- Test strategy & automation frameworks: Designed and implemented comprehensive test strategies with automation frameworks driving unit, integration, and end-to-end test development across backend services and frontend components. Developed test cases for complex business logic, API integrations, and data processing pipelines. Achieved high code coverage through optimized testing patterns and performance monitoring.
- AI-assisted development with LLM coding tools: Leveraged Claude, GitHub Copilot, and Cursor to accelerate Python, JavaScript, and test code generation. Developed expertise in critically evaluating and guiding LLM-generated code artifacts, ensuring quality, performance, and compliance with enterprise architecture standards and business logic.

- Telemetry & metrics for operational excellence: Utilized telemetry, logging, and performance metrics to drive code quality improvements, identify bottlenecks, and optimize system performance across distributed systems, microservices, and data processing pipelines.
- AI-Powered SaaS Solutions: Designed and deployed AI-powered applications integrating LLM APIs (Claude, GPT-4) for intelligent features including natural language processing, predictive analytics, and automated decision-making. Built conversational AI systems, recommendation engines, and intelligent data processing pipelines to enhance user engagement and operational efficiency.
- Machine Learning & Predictive Analytics: Implemented ML models using Scikit-learn, TensorFlow, and PyTorch for price prediction, recommendation engines, and anomaly detection. Trained and optimized models on large datasets, improving accuracy and reducing inference latency for real-time decision-making.
- Database Design & Optimization: Designed scalable database schemas with PostgreSQL and MongoDB, optimized queries for performance, implemented indexing strategies, and managed data migrations. Architected data pipelines for ETL operations and real-time analytics.
- Cloud Architecture & Infrastructure: Deployed and managed applications on AWS (EC2, Lambda, S3, RDS), implementing auto-scaling, load balancing, and disaster recovery strategies. Containerized applications using Docker and orchestrated with Kubernetes for production environments.
- Backend Development: Developed robust backend services using Python (FastAPI, Flask, Django) and Node.js (Express) with clean architecture patterns, SOLID principles, and modular design. Built RESTful and GraphQL APIs with comprehensive error handling and logging.
- Frontend Development: Built modern, responsive web interfaces using React.js, Vue.js, and vanilla JavaScript with state management (Redux, Vuex), component libraries, and design systems. Implemented accessibility standards and optimized performance through code splitting and lazy loading.
- Data Processing & Web Scraping: Implemented automated data collection pipelines using Playwright, BeautifulSoup, and Selenium for web scraping and ETL operations. Processed and transformed large datasets using Pandas and NumPy, ensuring data quality and consistency.
- Integration & Third-Party APIs: Designed and implemented integrations with third-party services and APIs (payment processors, analytics platforms, external SaaS tools). Built middleware solutions and webhooks for real-time data synchronization and event-driven architectures.
- DevOps & CI/CD Pipeline Management: Implemented comprehensive CI/CD pipelines using Jenkins, GitHub Actions, and GitLab CI for automated testing, building, and deployment. Managed infrastructure as code using Docker, Kubernetes, and Terraform for consistent production deployments.
- Performance Optimization & Monitoring: Profiled and optimized code for speed and memory efficiency, identifying and resolving bottlenecks in algorithms and database queries. Implemented distributed tracing, APM tools, and health checks for real-time system monitoring and alerting.

DigiCert – Salesforce CPQ/Revenue Cloud Developer

- Product Catalog & CPQ Configuration: Configured product bundles, options, attributes, pricing rules, discounting models, promotions, approval workflows, and guided selling processes within Salesforce Revenue Cloud to enable efficient quote generation and sales enablement.
- Contract Lifecycle Management (CLM) Implementation: Designed and deployed CLM capabilities within Revenue Cloud, including automated contract generation, e-signature integration (DocuSign/Adobe Sign), amendment tracking, renewal workflows, and compliance validations.
- Custom Apex, Triggers, and LWC Development: Developed custom Apex classes and triggers for pricing logic, approval process automation, and complex workflows; built Lightning Web Components for dynamic configurators, pricing waterfalls, and revenue dashboards to enhance user experience.

- Testing, CI/CD & Production Support: Designed and executed unit, SIT, and UAT test strategies; managed CI/CD pipelines using Jenkins, Git, and Copado; provided production support within SLAs, troubleshooting critical CPQ and revenue lifecycle issues to maintain system stability and compliance.
- Requirements Gathering & Documentation: Partnered with business stakeholders to translate complex revenue and contracting requirements into scalable CPQ/CLM solutions; created technical documentation, architecture diagrams, and training materials to facilitate knowledge transfer and system adoption.

Hitachi Vantara – Conga CPQ Developer

- CPQ Configuration & Pricing Logic: Configured Conga CPQ with custom product hierarchies, pricing rules, price matrices, discounting models, and constraint rules; designed pricing logic to support complex margin optimization and enterprise-scale sales operations.
- Advanced CPQ Development: Built custom callbacks, price rules, price matrices, promotions, and cart/quote behaviors using Apex; implemented guided selling processes to streamline sales workflows and improve quote accuracy at scale.
- Custom Apex, Triggers, and LWC Components: Developed custom Apex classes and triggers to enforce quote generation logic, pricing calculations, and data transformations; built Lightning Web Components for interactive configurators, pricing waterfalls, and real-time quote dashboards.
- Legacy Visualforce Modernization: Maintained and optimized legacy Visualforce pages with custom Apex controllers; progressively migrated components to Lightning Web Components while preserving business logic and ensuring zero downtime transitions.
- System Integration & ERP/Billing Synchronization: Designed REST/SOAP API integrations between CPQ and Sales Cloud, Service Cloud, ERP, and Billing systems; optimized SOQL queries and bulk operations to maintain governor limits and ensure high-performance data synchronization across platforms.
- Testing & CI/CD Deployment: Executed comprehensive unit, SIT, and UAT testing for CPQ configurations and customizations; managed deployments using Jenkins, Git, and Copado; provided production support for quote and pricing issues while maintaining system performance and compliance.

EJM – Conga CPQ and CLM Developer

- Contract Lifecycle Management (CLM) Implementation: Spearheaded end-to-end CLM implementation within Salesforce, designing automated contract workflows, e-signature integrations (DocuSign/Adobe Sign), amendment management, renewal tracking, and compliance validation processes.
- CPQ Configuration & Quote-to-Contract Integration: Configured comprehensive CPQ solutions with product catalogs, pricing rules, approval workflows, and guided selling; integrated CPQ with CLM to enable seamless contract generation and quote-to-cash processes.
- Custom Apex, Triggers, and LWC Development: Developed custom Apex classes and triggers to automate contract workflows, enforce business rules, manage state transitions, and integrate with document management systems; built Lightning Web Components for contract management interfaces and approval dashboards.
- Validation Rules & Business Logic: Established comprehensive validation rules, approval processes, and business logic to enforce contract compliance, manage complex approval hierarchies, and maintain data accuracy throughout the entire contract and quote lifecycle.
- System Integrations & Workflow Automation: Implemented integrations with third-party CLM platforms, document repositories, and e-signature providers; designed Flows and automation rules to orchestrate contract routing, e-signature workflows, stakeholder notifications, and approval chains.
- Testing, Deployment, & Production Support: Designed and executed unit, SIT, and UAT testing strategies; managed CI/CD deployments using Git and Copado; provided production support within SLAs, resolving critical contract and CLM issues to ensure compliance and operational continuity.

- VS Code & Salesforce CLI (SFDX): Developed using VS Code with the Salesforce Extension Pack and SFDX CLI for source-driven development, scratch org management, and metadata deployments.
- AI-Assisted Development: Used GitHub Copilot and other AI coding assistants to accelerate Apex, LWC, and test class generation, as well as code review and refactoring tasks.
- Developed and consumed RESTful and SOAP APIs using C#/.NET and Apex to enable seamless client-server communication between Salesforce, Conga CPQ, and external systems.
- CI/CD & Code Quality: Implemented comprehensive unit and integration tests, conducted peer code reviews, and ensured compliance with CI/CD pipelines using Git, Bitbucket, and Jenkins.
- Performance & Data Integrity: Troubleshoot and resolved issues related to Salesforce performance, governor limits, and data integrity through query optimization, asynchronous Apex, and bulk processing patterns.
- Agile/SAFe Delivery: Actively participated in Agile/SAFe ceremonies — daily stand-ups, sprint planning, PI planning, sprint demos, and retrospectives — translating user stories into production-quality code with cross-functional teams.
- Technical Documentation: Maintained documentation for system configurations, integration designs, deployment runbooks, and end-user guides to support knowledge transfer and onboarding.

TRAXCONTENTS Full Stack Developer | Nov 2023 – Oct 2024

Remote, Texas • Complete Python • LLM APIs • Machine Learning • Web Scraping • React • AWS

- TRAX OneSearch Claims Platform: Architected comprehensive Salesforce-based valuation platform integrated with AI/ML models to help claims teams and adjusters work faster and more accurately, enabling streamlined valuations that reduce Loss Adjustment Expenses while supporting fair outcomes for policyholders.
- Salesforce Claims Workflow Customization: Designed and built custom Salesforce applications to streamline claims processing workflows, configure approval processes, and automate valuation data flow to support adjusters with consistent, dependable tools that simplify complex claims work.
- Integrated LLM-based APIs: Built AI-powered competitor analysis assistant integrated with Salesforce, generating pricing strategy recommendations and valuation insights for revenue optimization and fair claims outcomes.
- Apex Development & Custom Business Logic: Developed custom Apex classes, triggers, and Lightning Web Components to implement complex claims valuation logic, data transformations, and automated workflows that enforce business rules and improve claims processing efficiency.
- Full-Stack Application Development: Built end-to-end web applications using Node.js, Python, React.js, and Tailwind CSS with clean separation between front-end and back-end; integrated Salesforce APIs for seamless claims data synchronization and real-time valuation processing.
- Machine Learning Pipelines: Developed Python-based ML pipelines using Scikit-learn, Pandas, and NumPy for price prediction, depreciation modeling, and valuation analysis across large claims datasets; trained models to improve accuracy and consistency in claim assessments.
- Data Collection & Web Automation: Implemented automated web scraping pipelines with Playwright and BeautifulSoup to gather valuation and competitor data from multiple sources, reducing manual data collection time by over 70% while improving data accuracy for Salesforce enrichment.
- API Development & Salesforce Integration: Built and maintained RESTful and SOAP APIs using Python and Node.js to deliver optimal pricing and valuation insights; integrated APIs with Salesforce to enable adjusters and claims professionals to access AI-driven recommendations directly within their workflows.
- Data Visualization & User Experience: Designed interactive React.js interfaces with Tailwind CSS to visualize AI-generated valuation insights, competitor data, and claims analytics; created intuitive Salesforce dashboards for adjusters and claims managers to make data-driven, faster, and fairer decisions.

- Cloud Deployment & DevOps: Deployed scalable full-stack and Salesforce applications on AWS (EC2, Lambda, S3) handling thousands of concurrent API requests and claims transactions; implemented CI/CD practices using Git and collaborated with cross-functional teams in Agile workflows to deliver reliable, high-performance claims solutions.
- Version Control & Agile Collaboration: Used Git for version control and collaborated with cross-functional teams in Agile workflows; participated in sprint planning, code reviews, and continuous improvement to deliver production-quality claims valuation solutions.

COGNIZANT Programmer Analyst | Jun 2020 – Jun 2022

India • Java • Complete Python • JavaScript • RESTful APIs • MS SQL

- Designed and developed Salesforce custom applications using Apex programming and Lightning Web Components, implementing business logic through triggers, validation rules, and process automation to support complex business requirements.
- Built and maintained Visualforce pages with custom Apex controllers and extensions to support legacy UI requirements alongside Lightning Web Components.
- Authored complex SOQL queries with relationship traversal and aggregate functions to support reporting, data migration, and trigger logic across multiple Salesforce objects.
- Configured Sales Cloud and Service Cloud features including custom page layouts, record types, validation rules, and approval processes to meet client requirements.
- Integrated third-party systems with Salesforce using REST APIs and middleware platforms, managing API Gateway configurations and troubleshooting integration issues.
- Built declarative automation using Salesforce Flows and Process Builder to streamline business processes, managing data transformations and system integrations across multiple Salesforce objects.
- Developed using VS Code with the Salesforce Extension Pack and SFDX CLI for source control-based development and deployments.
- Participated in Agile ceremonies (daily stand-ups, sprint planning, retrospectives, demos), partnering with cross-functional teams to convert user stories into well-tested, production-ready code.
- Conducted peer code reviews and contributed to release activities using Git and CI/CD pipelines, ensuring high-quality, regression-tested deliverables.

CORE COMPETENCIES

Salesforce AgentForce • Revenue Cloud • CPQ • OmniStudio • Apex • LWC • Flows • Data Cloud

AI & LLMs LangChain • Claude • GPT-4 • Hugging Face • Prompt Engineering • Agent Development

Programming Python • Java • JavaScript • C# • .NET • Node.js • React.js • Linux

Data & ML TensorFlow • PyTorch • Scikit-learn • Pandas • NumPy • Price Prediction

Integration REST APIs • SOAP • API Gateway • Web Scraping • Middleware

DevOps Git • Bitbucket • Jenkins • AWS • CI/CD • Docker

EDUCATION

- **University of Texas at San Antonio**
Master of Science in Computer Science
