

Priyanka Kurimilla

660-528-2299 | priyakurimillagoud@gmail.com | Texas, United States | Open to Relocate

SUMMARY

Data Analyst with nearly 3 years of experience in analyzing complex data and delivering actionable insights using tools like Tableau, Power BI, SQL, and Python. Skilled in data extraction, transformation, and cleaning to ensure accuracy and compliance. Experienced in creating interactive dashboards and reports that drive business decisions and improve operational efficiency. Collaborative team player focused on delivering data solutions that align with business goals.

WORK EXPERIENCE

Power Automate Data Analytics, Goldman Sachs, Texas, United States (Onsite)

Jan 2024 - Present

- Automated workflows by designing and optimizing Power Automate flows, streamlining data management processes across departments, and significantly reducing manual efforts. This resulted in a 40% improvement in task efficiency and faster turnaround times.
- Created interactive Power BI dashboards and reports that empowered stakeholders to make data-driven decisions, leading to a 25% boost in operational efficiency.
- Leveraged advanced skills in tools like Excel, Tableau, Power Automate, Power BI, and SharePoint to develop tailored solutions, earning a 95% satisfaction rate from stakeholders.
- Collaborated closely with teams to gather requirements, troubleshoot issues, and deliver automation strategies that enhanced workflow efficiency by 30%.
- Built dynamic SSIS packages to securely transfer and validate data across platforms, ensuring 100% data accuracy during migrations and reducing ETL execution times by 20%.
- Designed and maintained scalable data models using DBT, which improved query performance by 35% and ensured accurate analytics across multiple data sources.
- Developed horizontally scalable APIs in Python, utilizing libraries like Pandas and NumPy to automate data retrieval and processing, cutting data handling time by 40%.
- Transformed static SSRS reports into dynamic Tableau dashboards, increasing user engagement by 20% and making critical business insights more accessible.
- Created Agile performance dashboards in Power BI to track team productivity and KPIs, enabling real-time updates and a 25% improvement in monitoring project outcomes.
- Used DAX in Power BI to implement advanced calculations, simplifying performance reporting and improving efficiency for executives by 15%.
- Established robust error-handling mechanisms in SSIS processes and implemented task-level logging, reducing downtime and improving debugging by 10%.

Data Analyst, Verisk Analytics, Hyderabad, India

Sept 2020 - Jul 2022

- Designed and implemented interactive dashboards in Tableau and Power BI, enhancing data-driven decision-making and increasing operational efficiency by 25%.
- Extracted, transformed, and prepared data from multiple sources for seamless integration into visualization tools, ensuring data quality, integrity, and compliance with data governance standards.
- Delivered comprehensive Tableau Desktop training sessions, empowering clients to leverage high-quality data visualizations for business insights and operational improvements.
- Worked in agile teams to deliver data visualization solutions, meeting deadlines and achieving high client satisfaction by focusing on data quality, relevance, and business objectives.
- Collaborated with clients to document business requirements, translating them into technical specifications aligned with data governance, data quality, and business goals.
- Analyzed data with Python, R, SQL, supporting data quality management and reinforcing data integrity through data mining and cleansing.
- Developed SSIS packages to perform ETL operations, ensuring data quality, governance, and alignment with business intelligence objectives.
- Created compelling data visualizations that communicate insights to stakeholders, facilitating data-driven decision-making and supporting data quality and management across the organization.
- Utilized advanced Excel functions like V-lookup and pivot tables to merge, reconcile, and summarize large datasets, delivering actionable insights that align with strategic business management and data quality standards.
- Generated ad-hoc and scheduled reports using SSRS and Power BI, leveraging SQL queries to produce accurate, high quality data insights for business intelligence.
- Implemented incremental loads for data warehouse updates, maintaining data quality, consistency, and adherence to data governance practices.
- Executed MySQL database queries in Python, enhancing data quality, data integrity, and effective data management.
- Deployed and scheduled SSIS packages, configuring environmental variables and error handling to uphold data quality, integrity, and governance.

CERTIFICATIONS

Microsoft Certified: Azure AI Engineer Associate

IBM Data Analytics with Excel and R, Coursera

SKILLS

Data Visualization and Libraries	: Tableau, Power BI, Excel (Advanced), Crystal Reports, Matplotlib, Seaborn, Ad-hoc, KPI Reports, Power Automate, SharePoint, pandas, Numpy
Data Processing	: ETL, Data Processing, Data Modeling, SSRS, SSIS, Data Pipeline
Programming Languages	: R, Python, Java, C, HTML, CSS, JavaScript, CRM, Salesforce
Cloud Technologies	: Azure Cloud
Database Management	: NoSQL databases, Relational Databases (MySQL), SQL
Developer Tools	: Google Cloud Platform (GCP), Visual Studio Code, Visual Studio, Pycharm, Eclipse, Jupyter

EDUCATION

Northwest Missouri State University, MO, United States - Master, Computer Science	Aug 2022 - Dec 2023
Loyola Academy, Hyderabad, India – Bachelor of Science Computer Science & Engineering	Jun 2017 - May 2020

PROJECTS

Healthcare Facility Data Management System, , MS

- Developed a data management system for a healthcare facility. The project involved centralizing patient records into a single, accessible, and secure platform. This integration streamlined workflows, reduced processing times, and ensured compliance with industry standards, ultimately improving overall efficiency and safeguarding patient information.

Airline Analysis, , MS

- Managed and organized large complex datasets by creating storage buckets and tables in GCP, utilizing BigQuery for data loading, schema detection, and table management to enhance data handling and lifecycle management.
- Conducted trend analysis on airline cancellations, delays, and passenger demographics, evaluating performance metrics to provide actionable insights that improved the operational efficiency.
