

Priyanka Pamu

Senior Java Developer with AI

Celina, TX | priyanka.pamu@gmail.com | (214) 656-1409 | linkedin.com/in/pamupriyanka

PROFESSIONAL SUMMARY

Senior Java Developer with 13+ years of experience developing high-performance enterprise applications, and event-driven microservices. Expertise in building cloud-native applications on AWS, designing scalable architectures, and delivering secure, reliable software systems. Proven ability to drive engineering initiatives with a strong focus on clean code, automation, DevOps practices, CI/CD, and continuous improvement. Experienced in AI-assisted software development using GitHub Copilot and Claude to accelerate development, improve code quality, and enhance engineering productivity.

SKILLS

Java (8, 17, 21), Spring Boot, Spring MVC, Spring Data JPA, Spring Cloud, Spring Batch, Spring Security | GitHub Copilot, Claude (AI-Assisted Development) | Linux, Bash Shell Scripting | OAuth2, JWT, LDAP | RESTful APIs, Hibernate/JPA | Microservices | Apache Kafka, Kafka Streams, Avro, Schema Registry | Couchbase, Redis, MySQL | AWS (IAM, EC2, EFS, EKS, S3, SNS, CloudWatch) | Maven, Ansible, Docker, Git, GitLab CI/CD, Jenkins, SonarQube, Nexus/Artifactory | ELK Stack (Elasticsearch, Logstash, Kibana), Checkmk | HAProxy | OpenAPI (Swagger) | Jira, Agile/Scrum | System Design | IntelliJ IDEA, Eclipse, Visual Studio Code |

WORK EXPERIENCE

United Fortune IT Solutions

Jul 2025 – Present

FedEx Corporate Services - Pricing Application

Lead Java Microservices AI Engineer

- Utilized AI-powered development tools such as GitHub Copilot and Claude to accelerate microservices development, improve code quality, and automate repetitive development tasks.
- Designed and developed cloud-native applications using AWS services, including EC2, S3, EFS, SNS, and IAM to support scalable and reliable deployments.
- Containerized microservices using Docker and implemented deployment practices to improve application portability, consistency, and operational efficiency.
- Implemented event-driven communication patterns using Apache Kafka to enable asynchronous processing, reliable messaging, and seamless data exchange between microservices.
- Led solution design activities using OpenAPI (Swagger), contributing to architecture decisions focused on scalability, performance, reliability, and maintainability.
- Collaborated with cross-functional teams to analyze monolithic applications, identify domain capabilities, and define incremental modernization strategies using microservices architecture.

Canada Life

Java Microservices Architect

- Designed, developed, and enhanced microservices-based applications using Java 17/21, Spring Data, Spring MVC, and Spring Cloud.
- Implemented secure authentication and authorization using Spring Security, OAuth2, JWT, and LDAP integration.
- Developed data persistence and caching solutions using NoSQL databases, including Couchbase and Redis to improve application performance and scalability.
- Developed Spring Batch jobs for scheduled processing and high-volume data synchronization.
- Leveraged AWS CloudWatch and Amazon S3 for cloud-based application monitoring, storage, and operational support, improving monitoring capabilities, log analysis, and cloud storage management.

British Telecom - Directory and Profile (D&P)

Lead Java Developer

- Designed and implemented microservices-based solutions with secure API communication using Java 17, Spring Boot, Spring Security, and JWT-based authentication and authorization, following enterprise architecture best practices.
- Containerized applications using Docker and automated deployments using GitLab CI/CD and Ansible, reducing deployment effort and improving release consistency.
- Developed Linux Bash scripts to automate ELK Stack installation, streamlining monitoring setup and reducing manual operational effort.
- Implemented application monitoring and observability solutions using ELK Stack (Elasticsearch, Logstash, Kibana) and Checkmk, creating dashboards, analyzing logs, monitoring application health, reducing troubleshooting time, and improving application observability.

British Telecom – Vision Online Services Platform (VOSP)

Senior Java Developer

- Developed RESTful web services for British Telecom (BT) using Java 8, Spring Framework, Hibernate, JPA, and JDBC to implement scalable and reliable backend solutions.
- Collaborated with BT engineering teams onsite in the UK for one year, participating in solution design, development, production support, and stakeholder discussions.
- Developed unit and integration test cases using JUnit, Mockito, and Cucumber, ensuring high code quality and test coverage.
- Used Maven for build management, Git for source code version control, and Jenkins for CI/CD pipeline automation in an Agile development environment.

EDUCATION

Bachelor of Technology in Electrical Engineering

Jawaharlal Nehru Technological University | 2007 - 2011

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate (SAA-C03)
