

VAIBHAV GAKHAR

+1 (612) 986-2297 • gakha005@outlook.com • [LinkedIn](#)

PROFESSIONAL SUMMARY

Analytics expert with 7+ years in managing data in EdTech, Finance, Procurement and Healthcare. Skilled in data visualizations, engineering, and development with a strong track record in delivering data-driven solutions and compelling storytelling to guide strategic decisions

EDUCATION

UNIVERSITY OF MINNESOTA, Carlson School of Management, Minneapolis, MN

May 2024

Master of Science in Business Analytics

VIT UNIVERSITY, Vellore, India

April 2019

Bachelor of Technology in Computer Science

SKILLS

- **Core Competencies:** Exploratory Data Analytics, Data Validation & Auditing, Root Cause Analysis, Data Quality Assurance, Data Visualization & Reporting, Data Modeling, Data Warehousing, Data Analysis, Agile/Scrum Practices, Business Analysis, Project Management
- **Tools:** Business Intelligence Tools (Tableau, Power BI), Tableau Prep, Python (NumPy, Pandas), SharePoint, SQL, Snowflake, Alteryx, ETL, HIVE, SAP BTP, JIRA, GitHub, Confluence, MS Excel (Pivot Tables, VLOOKUP)

PROFESSIONAL EXPERIENCE

APPLE, Austin, TX (Contract)

Senior Data Analyst (Operations Analyst)

May 2025 – May 2026

- Led the development of Onboarding dashboards to analyze new hires trends across ILT/SGT Trainings using SQL and Tableau - ingested data sources over 15GB+ from LMS and performed data validation checks - save 400 man-hours per month and improve reporting accuracy ~ 99%
- Engineered a Tableau-based data quality audit dashboard to validate onboarding data, investigate reporting discrepancies, and support issue triage and resolution, reducing post-release defects by 12% and increasing stakeholder trust
- Formulated advanced KPI metrics in Tableau to analyze learner and course completion trends using LOD expressions & parameterized calculations, accelerating analysis time by 54% and facilitating data driven decisions
- Spearheaded multi-cloud data migration initiative to transfer Knowledge data from Tableau flows and legacy Dremio Data Lake to Snowflake using Alteryx – reduced data refresh time by 68% and infra costs by \$70M/20%

AMERICAN TECHNOLOGY CONSULTING (ATC), Des Moines, IA

Business Data Analyst (Analytics Consultant)

October 2024 – March 2025

Real Time Payments (RTP) transactions for a Fortune 500 financial client (SQL, Snowflake, Alteryx, Tableau)

- Headed the development of an analytics dashboard to track real-time financial payments worth \$30B per year utilizing SQL and Tableau - integrated data sources over 40GB to eliminate manual reporting and save 880 man-hours per month
- Implemented framework to transfer payments data from legacy warehouses in HIVE to Snowflake using Alteryx – reduced data retrieval time by ~15 minutes/90% per query and dashboard refresh time by 85%
- Investigated, triaged, and escalated data quality issues affecting real time payments reporting - partnered with data engineering and business stakeholders to resolve data quality defects and reduced time to production by 9%
- Architected customer hierarchy and Row-Level Security (RLS) mapping in Tableau to enable reporting on Line of Business level - enhanced data security and operational efficiency to approximately ~ 99%

CARLSON ANALYTICS LAB, Minneapolis, MN

Data Science Consultant

July 2023 – May 2024

Exploratory Analytics for a leading Financial Company (Python, Clustering, SQL, Power BI): Case competition finalist

- Analyzed participant segments, identified key differences among them, and created interventions to boost success outcomes such as savings growth, credit score for client customers utilizing SQL queries and MS Excel functionalities (Pivot Tables, VLOOKUP)
- Applied K-Means clustering and predictive models (Random Forest) in Python to deliver business recommendations for augmenting rate of savings growth by 65%, revealing key differences in their characteristics using Power BI dashboards

Statistical analysis of extended maternity leave policy on women workplace (Python, Clustering, Casual): Case competition winner

- Engineered the winning solution for *Analytics for Good hackathon '24* – identified key disparities amongst female working population using K-Means clustering and logistic regression to improve efficiency of targeted interventions by 19%
- Examined the impact of maternity extension on recruitment of female IT professionals using Propensity Score Matching - provided recommendations to augment rate of recruitment in Tier 2 cities

SAP LABS, Mumbai, India

Senior Associate Data Quality Analyst III (Analytics Engineer)

September 2021 – May 2023

- Partnered with a national airline carrier to build an automated dashboard using Tableau as end-to-end solution for optimization of crew pairings and SAP Concur expenses - eliminated manual procedures to reduce deadhead expenditure by 20% and save 180 man-hours per month
- Analyzed flight scheduling data and devised KPI metrics using Tableau (Level of Detail (LOD) expressions & parameterized calculations) to identify inefficiencies in crew pairing; published dashboards to Tableau server to enable downstream stakeholders' consumption
- Pioneered the SAP Fieldglass mobile apps release process and led a team of 3 analysts to ideate and implement platform enhancements and stakeholder's request through agile methodologies and strategic planning

- Piloted implementation of ETL pipelines using Amazon Glue (S3, Athena, Lambda) and developed dashboards in Tableau to monitor automation scripts results, eliminating manual processing and optimizing performance for critical scripts by 18%
- Conceptualized a high-volume automated execution system to automate manual procedures using Python, SAP Machine learning service and Tableau, achieving \$1M+ saving and reduction in processes bottlenecks by ~2-3 days for customer escalations and Hot Fixes

Associate Data Quality Engineer II (Software Developer), Prod Development & Analytics

June 2020 – September 2021

- Collaborated with a premium shopping destination hub to identify high-value cohorts for cross-sell opportunities – uncovered customer behaviour patterns using K-Means clustering and association rule mining in Python
- Championed the development of an interactive dashboard to deliver actionable insights for personalized marketing strategies using SQL and Tableau – contributed to a 12% increase in regional sales through data-driven decisions and segmentation
- Conducted A/B experimentation to test the MOA Insiders Loyalty Program for Silver and Gold tier customers under a monthly reward points scheme, resulting in an 8.4% increase in user engagement and drive a 3% (\$1M) lift in overall sales revenue
- Implemented integrated data pipelines between Apache Airflow and SQL to automatically assign Jira tickets to appropriate Subject Matter Experts (SMEs) based on SQL-based mapping, resulting in reduction of ticket resolution time by 72 minutes/40% per request

LTIMINDTREE, Mumbai, India

Graduate Engineer Trainee, Healthcare Digital & Analytics

May 2019 - June 2020

- Developed a process automation dashboard to overhaul complex manual tracking of pharmaceutical shipments using SQL and Power BI - reduce delivery times by 10% and optimized processing capacity, resulting in saving 150 man-hours per month approximately
- Identified requirements, conducted impact analysis & presented actionable KPIs for Direct-To-Patient Pharma app in product meetings
