

PROFESSIONAL SUMMARY

- An experienced IT developer with over 4+ years of experience in all phases of the Software Development Life Cycle including web service development and web application development.
- Worked with Jira and Agile Methodologies and experienced in Banking domain.
- Worked on developing web applications using Java, OOPS, Multithreading, Spring Boot, and Angular and focused on creating features that allowed users to log in securely and manage their data smoothly.
- Used Docker to package applications, making it easier to deploy them across different environments to streamline the development process.
- Set up automated pipelines with Jenkins for testing and continuous integration, ensuring that new updates were thoroughly tested before going live.
- Gained experience with MySQL and Mongo DB databases and handled tasks like storing and retrieving data efficiently. Learned to collaborate closely with teammates, contributing to our sprints and delivering projects on time with quality code by working in Agile teams.
- Excellent problem solving skills, attention to detail and a collaborative mindset.

TECHNICAL SKILLS

- Programming languages: Java, C, Python
- Web Technologies: HTML5, CSS3, JavaScript, React, JSON, Bootstrap
- J2EE Technologies: JDBC, REST, JPA, Spring Data, Spring Cloud, Microservices, WebLogic
- Databases: MySQL, MongoDB, SQL Server
- Spring Frameworks: Spring, Hibernate, Spring Security, Spring Boot, JUnit, Mockito
- Application/Web Server: Apache Tomcat
- DevOps tools: GitHub, AWS Code Commit, Jenkins, SonarQube
- CI/CD tools: Docker, Kubernetes
- Messaging Queues: Apache Kafka, RabbitMQ, ActiveMQ
- Development Methodologies: Agile, Waterfall
- Databases: MySQL, Oracle, Mongo DB, NoSQL, Postgresql, Cassandra
- AWS Services: EC2, S3, ECS, ECR, ALB, SSM Parameter Store
- Web Services: Rest, SOAP, OAuth
- IDE's & Other Tools: Eclipse, IntelliJ, Visual Studio, Jira, Confluence, ServiceNow, Swagger, Postman

PROFESSIONAL EXPERIENCES

Wells Fargo | NC

Software Engineer

Responsibilities:

August 2024 to Present

- Implemented Agile practices, including TDD, BDD, and pair programming, to support Scrum teams. facilitated a collaborative and dynamic development environment.
- Created dynamic screens with frontend technologies like HTML, Bootstrap, JDBC, JSP, JUnit, XML, and JavaScript. AJAX, jQuery, HTML5, http and CSS3 are among the sophisticated capabilities included.
- Used Angular 2 and 4 to improve the user experience with features like two-way data binding, components, directives, and dependency injection.
- Used Angular technologies such as Reactive Forms and Observables to efficiently manage user input and asynchronous actions.
- Used Java 8+ capabilities like lambda expressions, streams, and functional interfaces to create succinct and efficient code.
- Developed corporate Java applications with POJOs and lightweight frameworks such as Spring and Hibernate.
- Developed backend services using Spring Boot, Spring batch including entity/model, DAO/repository, controller, service, business, and persistence layers.
- Developed and implemented system functionality with Spring Boot, Microservices, and Hibernate ORM. Integrated smoothly with Spring MVC.
- Utilized N-tier and Microservices architecture with Spring Boot, Spring Cloud Config, Netflix OSS components (Eureka and Hystrix), PCF, cloud platforms like AWS, RabbitMQ, Kafka, Zookeeper, Cassandra, MySQL, Postgresql and RESTful Web Services.
- Developed Kafka components to facilitate inter-microservice communication.
- Developed containerization tools like Docker-based microservices deployment modules that integrate with Jenkins, Kubernetes, and Ansible for efficient CI/CD pipelines.

- Set up Kafka producer and consumer applications on Zookeeper-managed clusters.
- Utilized Git, Github, SVN, and BitBucket for effective collaborative development.
- Used Maven for build automation, including establishing dependencies and plugins for successful application compilation and building.
- Automated routine chores with Jenkins and UNIX Shell scripts to boost CI/CD efficiency.
- Proficient in SQL and PL/SQL development for Sybase, including database creation, stored procedures, and data retrieval.
- Optimized MongoDB CRUD operations for applications.
- Developed cloud-native applications using Azure Kubernetes Service (AKS) to optimize container orchestration.
- Managed Azure resources, including VMs, Storage Accounts, and Networking components. Used Azure Key Vault for secure data storage.
- Used Azure Logic Apps to automate workflows and integrate services with Java apps.
- Used JUnit and integration testing tools to verify Java applications, microservices, and RESTful web services are reliable and robust.

Environment : Java, HTML, JDBC, JSP, JavaScript, AJAX, jQuery, HTML5, CSS3, Angular 2 & 4, Java 8+, Spring Boot, Hibernate ORM, Microservices, Spring Cloud Config, Netflix OSS (Eureka, Hystrix), PCF, AWS, RabbitMQ, Kafka, Zookeeper, Cassandra, MySQL, RESTful Web Services, Docker, Kubernetes, Jenkins, Ansible, Maven, Git, Github, SVN, BitBucket, SQL, PL/SQL, Sybase, MongoDB, Spark, Scala, Azure Kubernetes Service (AKS), Azure VMs, Azure Storage, Azure Networking, Azure Key Vault, Azure Logic Apps, JUnit, Mockito, Selenium, Performance Testing, Agile, TDD, BDD, Pair Programming, Code Reviews

Western Illinois University

Jan 2023 – May 2024

Graduate Assistant

- Built a containerized **Spring Boot** application for a proof-of-concept project called **Thin slice** to log the reimbursement amount.
- Developed business logic for porting multiple **SQL Server** database tables from legacy application to **Wilmu Pricer Engine**, an application, calculates reimbursement amount for each encounter after complex rate calculations, for expanding CPE's functionality.
- Led system design and provided guidance to application teams, utilizing **Java**, **microservices**, and **REST APIs** to ensure successful service deployment.
- Conductive code review for java and angular pull requests and working on multiple defects.
- Expertise with unit testing & Test-Driven Development (TDD)

Infosys| Hyderabad| India

May 2020 – July 2022

Java Developer

Responsibilities:

- Implemented the **Core Java** concepts such as File Handling I/O, Collection frameworks, and Exception handling.
- Wrote custom **Java Classes** to implement business logic and transformation logic.
- Used a complete annotation-driven approach to develop the application using **Spring** and also involved in setting up the spring bean profiling.
- Developed Single Page Applications (SPA) using **HTML5**, **CSS3**, **JavaScript**, **Bootstrap4**, **Angular 11**, **Angular CLI**, and **Typescript**.
- Designed, developed, and tested J2EE components like **Java Beans**, **Java**, **XML**, **Collection Framework**, **JSP**, **Spring** and **Hibernate**, and **Perl scripting**.
- Worked on **Hibernate** with Spring Integration as the data abstraction to interact with the database and used dependency injection (DI) using Spring framework and annotations.
- Developed the DAO layer for the application using Hibernate to map java classes with database and created queries with **Hibernate Query Language (HQL)**.
- Created both **XML and Java configuration files** for setting up Apache CXF as JAX-RS runtime, Spring Data and **Spring JDBC** template technologies.
- Used **SVN** as version control management and for code commits and used **Eclipse IDE** to develop the project.
- Deployed web application components on **Tomcat server** for development and test environments.
- Worked with **Jasmine** in testing and unit testing angular modules.
- Performed unit testing for each module and prepared documentation for future references and upgrades.
- Used **JIRA** for bug tracking, project level issue tracking and environmental issue tracking.

Environment: Java 11, Spring Boot, Spring Data, HTML5, CSS3, JavaScript, Bootstrap4, Angular 11, Angular CLI, Typescript, Java Beans, XML, JSP, Hibernate, Perl scripting, Eclipse, Apache Tomcat, Junit, Jasmine.

EDUCATION

Western Illinois University, Macomb, Illinois

Aug 2022 – May 2024

- Masters in Computer Science with CGPA:3.66/4.0.
- **Coursework:** Artificial Intelligence Methods, Data Structures & Algorithms, Core Java, Database Design and Administration, Advanced Artificial Intelligence, Computer Architecture, Software Engineering, Computer Stimulation, Computer Networks, Operating Systems, Advanced Operating Systems, Topics of Operating Systems, Computer Graphics.

Gokaraju Rangaraju Institute of Engineering and Technology

July 2018 – May 2022

- Bachelors in Electronics and Communications Engineering with CGPA : 8.8/10
- **Coursework:** Digital Communication, Data Structures, Computer Networks, Java, DBMS, Python, Operating Systems, Digital Signal Processing, Network Security, Machine Learning, Cloud Technologies.

ACADEMIC PROJECTS

Airline Management:

- Developed a full-stack application using Spring Boot and Angular to manage airline operations, including flight scheduling, booking management, and user authentication.
- Implemented robust exception handling, data persistence with Spring Data JPA, and a responsive user interface for seamless user interaction.

Automated Attendance and Monitoring System using Machine Learning

- Built a face recognition based attendance monitoring system for educational institutions to enhance and upgrade the current attendance system.
- Created and gathered certain datasets of students and are loaded in system using computer vision library. The students whose faces are identified are given attendance automatically and is updated in the EXCEL sheet along with the time at which the face is recognized. The names of the students who are absent for the class are reflected in a telegram group. The attendance is given to the students who are present in the class for a certain period of time. This is done through monitoring. The whole data is sent to the cloud so that the data can be accessed whenever needed.
