

VARSHA EPPALA

Cleveland, OH | +1(216) 954-9273 | V.eppala12@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

PROFESSIONAL SUMMARY

- Java Developer with 4+ years of experience building scalable enterprise applications using Java, Spring Boot, Microservices, and REST APIs, integrating backend services with React.js and TypeScript based frontend applications.
- Hands-on experience designing microservices architectures, Apache Kafka streaming pipelines, and Redis caching layers while building enterprise platforms using Adobe Experience Manager (AEM), Apache Sling, and OSGi.
- Experienced in developing cloud-ready services on AWS and Azure, deploying containerized applications using Docker and Kubernetes and implementing automated CI/CD pipelines with Jenkins, GitHub Actions, Maven, and Terraform.
- Secures and optimizes backend APIs using Spring Security, OAuth2, and JWT, delivering high-performance distributed systems aligned with modern Java backend and full stack engineering practices.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, TypeScript, Python, SQL

Backend & Frameworks: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Apache Sling, OSGi, Node.js

Frontend Development: React.js, HTML5, CSS3, TypeScript, Adobe Experience Manager (AEM), AEM Touch UI, HTL (Sightly)

API & Integration: REST APIs, OpenAPI (Swagger), API Gateway, OAuth2, JWT

Messaging & Streaming: Apache Kafka

Databases: MySQL, SQL Server, PostgreSQL, MongoDB

Cloud & Edge Platforms: AWS (EC2, S3, Lambda, CloudFront), Microsoft Azure, Akamai CDN, Akamai Edge Workers, EdgeKV

DevOps & Containerization: Docker, Kubernetes, Jenkins, GitHub Actions, Terraform, CI/CD

Caching & Performance: Redis, Distributed Caching, CDN Caching

Testing & Tools: JUnit, Mockito, Git, Maven, Gradle, Postman, IntelliJ IDEA, Eclipse, JIRA

Architecture & Design: Microservices Architecture, Event-Driven Architecture, MVC Architecture, Layered Architecture, Domain-Driven Design (DDD)

PROFESSIONAL EXPERIENCE

AEM / DCC Developer

Sep 2025 - Present

Comcast | Pennsylvania, USA

- Engineered backend services using Java, Spring Boot, and REST APIs to manage media asset workflows within Adobe Experience Manager (AEM) DAM, enabling automated attachment of subtitle and audio renditions and reducing manual processing effort by 40%.
- Built reusable digital content components with Apache Sling, OSGi, HTL (Sightly), HTML5, CSS3, and JavaScript, allowing content teams to deploy structured video pages faster and improving publishing turnaround time by 30%.
- Integrated React.js and TypeScript frontend modules with backend services using Spring Boot REST APIs, enabling dynamic rendering of personalized media content and improving client-side data loading performance by 28%.
- Optimized high-traffic media delivery by configuring Akamai CDN caching strategies and Redis distributed caching, which lowered page load latency for Xfinity digital platforms by 35%.
- Containerized Java microservices using Docker and Kubernetes to support scalable media processing services, improving deployment reliability and maintaining stable performance during large streaming events.
- Automated application build and release workflows using Jenkins, GitHub Actions, Maven, and Terraform, shortening deployment cycles and reducing manual release effort by 50%.
- Enabled asynchronous service communication by introducing Apache Kafka within the microservices architecture, allowing backend services to process video metadata updates without blocking user-facing operations.
- Strengthened service security by implementing Spring Security with OAuth2 and JWT authentication, ensuring protected API communication and safeguarding user account context used in personalized content delivery.

Java Developer

Feb 2024 - Aug 2025

Bluestone IT Solutions | USA

- Engineered backend microservices using Java, Spring Boot, and REST APIs to support enterprise digital platforms, improving service scalability and reducing average API response time by 27%.
- Developed reusable backend modules with Spring Data JPA, Hibernate, and SQL Server to optimize data access layers, reducing database query execution time by 30% across high-volume application workflows.
- Implemented Adobe Experience Manager (AEM) components using Apache Sling, OSGi, and HTL, enabling content teams to publish structured product pages faster and improving release turnaround time by 35%.
- Integrated distributed caching using Redis with Spring Boot services to store frequently accessed session data, reducing repeated database queries and improving backend performance by 22%.
- Collaborated with frontend teams to integrate REST APIs with React.js and TypeScript applications, improving client-side data delivery efficiency and reducing UI load latency by 25%.
- Automated application build and deployment pipelines using Jenkins, Git, Maven, and CI/CD workflows, decreasing release cycle time by 40% and improving deployment consistency across environments.
- Containerized backend microservices using Docker and Kubernetes to support scalable cloud deployments, enabling reliable service scaling during peak traffic periods.
- Ensured secure service communication by configuring Spring Security with OAuth2 and JWT authentication, protecting internal APIs and strengthening enterprise application security controls.

Java Developer

Jun 2023 - Jan 2024

Wells Fargo | North Carolina, USA

- Developed secure backend APIs using Java, Spring Boot, and REST APIs to handle customer account and transaction requests, improving service response efficiency and supporting high volume digital banking operations with 30% faster API performance.
- Strengthened financial service security by configuring Spring Security with OAuth2 and JWT authentication, enabling protected API access for internal banking systems and reducing unauthorized access risks across customer transaction services.
- Optimized database interaction layers using Spring Data JPA and Hibernate with SQL Server and MySQL, improving execution efficiency of complex transaction queries and reducing data retrieval time by 28%.
- Built scalable backend modules using Java and Microservices Architecture with Spring Boot, allowing independent deployment of payment validation and account services and improving system scalability by 25% during peak banking activity.
- Implemented structured digital banking content delivery using Adobe Experience Manager, Apache Sling, OSGi, and HTL, enabling business teams to publish financial product updates faster and reducing content release turnaround by 35%.
- Integrated internal banking platforms through REST APIs and JSON-based service communication, enabling consistent data exchange between transaction processing systems and customer account management services.
- Introduced Redis-based distributed caching for frequently accessed customer account data, decreasing repetitive database queries and improving backend response latency by 22% for high traffic user sessions.
- Automated build and release workflows using Jenkins, Git, Maven, and CI/CD pipelines, improving deployment consistency and reducing backend service release time by 40% across development and staging environments.

Software Engineer

Jul 2019 – Jul 2021

Intel | India

- Designed backend services using Java and REST APIs to capture and process device telemetry data stored in MySQL, enabling structured monitoring workflows and improving availability of device performance data by 30%.
- Implemented inter-service communication using JSON-based REST APIs, enabling monitoring applications to exchange device status information reliably and improving integration stability across internal systems.
- Optimized database operations through SQL query tuning on MySQL, improving execution efficiency for device activity queries and reducing dashboard data retrieval time by 25%.
- Developed internal monitoring dashboards using HTML5, CSS3, and JavaScript, enabling engineers to visualize real time device health metrics and respond faster to operational alerts.
- Integrated telemetry processing logic using Python scripts connected to backend APIs, enabling automated validation of incoming device data and improving monitoring data accuracy by 20%.
- Structured backend components using Java with MVC and Layered Architecture patterns, enabling modular service design and improving maintainability of internal monitoring applications.
- Maintained build and source control workflows using Git and Maven, improving development collaboration and reducing build configuration inconsistencies by 35%.
- Validated backend service behavior using JUnit and Postman, ensuring reliable API functionality and improving stability of device monitoring data ingestion systems.

PROJECTS

Enterprise Microservices Banking Platform

- Developed backend microservices using Java and Spring Boot to manage account, transaction, and payment services through REST APIs, enabling independent deployment and improving transaction processing throughput by 35%.
- Implemented asynchronous communication between services using Apache Kafka, enabling reliable event streaming for transaction updates and improving backend processing efficiency during high banking activity.
- Containerized backend services using Docker and Kubernetes while integrating Redis caching and MySQL databases, enabling scalable deployment and reducing API response latency for frequently accessed financial data by 30%.

Real-Time Financial Data Analytics Dashboard

- Built backend data ingestion services using Python-based REST APIs to collect financial transaction data into MySQL, enabling consistent data availability for analytics reporting systems.
- Developed interactive analytics dashboards using HTML5, CSS3, and JavaScript, enabling visualization of financial metrics and improving accessibility of operational insights for internal business teams.
- Implemented data validation and aggregation scripts using Python and SQL, improving accuracy of financial reporting datasets and reducing inconsistencies in analytical outputs by 25%.

EDUCATION

Master of Science in Management Information Systems

Aug 2021 - May 2023

Cleveland State University | Cleveland, Ohio, USA

Bachelor of Technology in Electronics & Communication Engineering

Aug 2015 - May 2019

Nalla Narasimha Reddy Group of Institutions | Hyderabad, India
