

Rishinivas Madishetti

Java Full Stack Developer

Contact

203-493-4640

Rishinivasmadishetti64@gmail.com

Education

Fitchburg State University, MA, USA

- Computer Science / Masters (2024)

Anurag Group of Institutions, India

- Information Technology/Bachelors (2021)

Summary

Dynamic and detail-oriented **Java Full Stack Developer** with over **5+ years** of experience designing, developing, and deploying web applications Proficient in both front-end and back-end technologies, including **Java 11/17, Spring Boot, Hibernate, HTML/CSS, JavaScript, React, and Angular**. Skilled in **RESTful web services, microservices architecture**, and database management with **SQL and NoSQL** databases. Adept at working in Agile development environments, utilizing tools such as **CI/CD Jenkins, Docker, and Kubernetes** for continuous integration and deployment Strong problem-solving abilities and a passion for clean, efficient code and scalable solutions Excellent communicator with a proven track record of delivering high-quality applications that meet client requirements and improve user experience.

Technical Skills

- Languages /Web Services** : Core Java, Java 11/17/22, J2EE, C, C++, SQL, PL/SQL, Python
- Java/J2EE Technologies** : Java 8&11, J2EE, JSP, JMS, JDBC, Servlets, XML, Struts, web Services (SOAP, JAX-RPC, JAX-WS, JAX-RS, WSDL,XSD),Log4j, Spring MVC, Spring Boot, Java Reactive, Functional programming, Akka, Scala, Micro services, Multithreading
- RDBMS / Tools:** Oracle 9i (SQL), SQL, PL/SQL with TOAD 8.5
- IDE/Editors:** IBM RAD, Eclipse
- Web Technologies / Scripting Languages:** Servlets, JSP, HTML, DHTML, CSS, Angular JS, Node JS, jQuery, Mobile, jQuery, JavaScript, Backbone JS, AJAX, Microservices, DWR (Direct Web Remoting), RESTAPI creation
- XML Technologies** : XML, DTD, XSD, SAX, JAXB 2.0
- Databases:** Oracle 9i and 11g, IBM DB2 v8, My SQL, MongoDB, Cassandra
- Java Based Build Tool:** Ant 1.7.0, Maven 2.2.1, Jenkins, Build Forge / Splunk
- CI/CD:** Git, Jenkins, Docker, Kubernetes
- Project Management tools:** JIRA, Service Now, Confluence, WIKI
- UI Applications:** HTML, CSS, JavaScript, AngularJS 4,6&8, ReactJS, NodeJS, jQuery, AJAX, JSON, XHTML, XML and Bootstrap.
- Testing Frameworks:** JUNIT, Corburtura Code Coverage, Mockito, Kibana & Power Mock, mocking extensions to Junit
- Operating System:** Windows, Linux, Unix, UNIX Shell Scripting

Certifications

- AWS Certified Developer – Associate** Amazon Web Services
- Oracle Certified Professional, Java SE Programmer** Oracle

Work Experience

Java Full Stack Developer | GE HealthCare

Connecticut, USA

Nov 2023 - Present

Description: GE HealthCare is a leading global medical technology and life sciences company that provides innovative healthcare solutions.

Responsibilities:

- Developing server-side logic using **Java 11/17 (Spring Boot, Hibernate, etc.)**, handling **API integrations**, business logic, **database interactions**, and **ensuring** data consistency using **functional programming principles**.
- Working with front-end technologies like **JavaScript, React, HTML and CSS** to create responsive and user-friendly interfaces for healthcare applications using **AngularJS for single-page applications**.
- Architecting **robust, scalable**, and high-performance systems that support **medical devices, diagnostic tools**, and healthcare applications using **Node.js for real-time data processing**.
- Experienced in implementing** Micro Services, **SOA with xml base web Services (SOAP/UD DI/WSD L)** using Top Down and **Bottom-Up approach**, worked with **Docker** to deploy **Micro-services** in modern containers to increase Isolation.

- Implemented **RESTFUL Web services** to retrieve **data** from **client** side and made **REST API** calls from **AngularJS** and **parsed** the data to project to **client** and handled the security and **Authorization** using **Spring Security** and **Auth1/2**
 - Developed **DAOs (Data Access Object)** using Hibernate as **ORM** to interact with **DBMS - MySQL and Mongo DB**
 - Implementing **microservices architecture**, ensuring modularity and ease of **maintenance** across different **layers**.
 - Designed and implemented a scalable infrastructure as code solution utilizing Terraform, securing sensitive data with **HashiCorp Vault**, and automating deployment workflows with **Ansible**, while leveraging serverless architectures and configuring deployments with YAML files.
 - **Experienced in implementing** Micro Services, **SOA** with **xml** base **web Services** (SOAP/UD DI/WSD L) using Top Down and **Bottom-Up approach**, worked with **Docker** to deploy **Micro-services** in modern containers to increase Isolation.
 - Working closely with **cross-functional** teams (product managers, **UI/UX designers**, QA engineers) to ensure the developed **software meets** the functional requirements of healthcare systems and user needs.
 - Ensuring the **Software Integrates** seamlessly with existing healthcare systems and **data sources**.
 - Strong knowledge and **hands-on experience** of deploying applications using **Kubernetes**, **cloud native** application development, **Pivotal Cloud Foundry (PCF)**, **GCP**, **JavaScript**, **Kendo UI**, **Java/J2EE** technologies & **RDBMS**.
 - Leading and mentoring a team of developers, ensuring the application of **best practices** in software development such as **test-driven development (TDD)**, **continuous integration/continuous deployment (CI/CD)**, and **agile methodologies**.
 - Writing **clean, reusable**, and maintainable code while conducting code **reviews** and performance optimization.
 - Working within the boundaries of healthcare regulations, such as **HIPAA** (in the U.S.), **GDPR** (in Europe), or other relevant frameworks, ensuring that sensitive patient data is managed securely.
 - Designed and developed scalable, data-driven web applications using Java as the primary backend technology, integrating with Django and **FastAPI for RESTful APIs**, **Flask** for microservices, **Prometheus** for monitoring, **Snowflake** for data warehousing, and leveraging **PyTorch** for AI-powered features, with semantic technologies for knowledge graph-based data modelling.
 - Designed and deployed a scalable Java-based web application on **GCP** utilizing PaaS and IaaS services, implementing **OAuth** authentication, and leveraging **WebKit** for seamless UI rendering, while automating deployment scripts using PowerShell and generating key metrics reports in **MS Word**, **MS Excel** for stakeholder analysis.
 - Proficient in functional programming principles using Java features such as lambda expressions, method references, and functional interfaces, Agile methodologies, with experience in GitHub version control and programming languages like **Python**, **JavaScript**, **TypeScript**, **Mocha testing**, **Splunk monitoring**, **logging**, **Kafka messaging**, and **Mockito mocking**.
 - Skilled programmer in C# and C++ languages. Skilled in API testing using Postman and familiar with CloudFormation, Code Pipeline, and Lambda functions. Utilize Jira for project management and Selenium for automation testing.
 - Implementing security **measures** and encryption for sensitive data to meet **industry standards** and **legal requirements**.
 - Experience in managing cloud technologies (**AWS**) & GCP environments for deploying applications and handling **infrastructure-related needs**. Developed DAOs using Hibernate as ORM to interact with DBMS, MySQL and Mongo DB on **AWS RDS**.
 - Participated in the DevOps pipeline, automating the deployment process and supporting the scalability of applications using **AWS Code Pipeline**, **Code Build**, and **Code Commit**.
 - Developing solutions that improve healthcare efficiency, such as applications for **medical imaging**, **patient monitoring**, **telemedicine & hospital management**. **Integrating healthcare** devices and sensors with software for **real-time data processing**
- Environment:** Java, Spring Boot, Hibernate, API integrations, JavaScript (React, Angular, or Vue.js), HTML, and CSS, robust, scalable, SOA, Python, web Services (SOAP/UD DI/WSD L), UI/UX designers, Mockito, OAuth, Django, FastAPI, Flask, Pytorch, Kubernetes, RDBMS, GCP, pivotal cloud foundry, JavaScript, Kendo UI, Java/J2EE, (CI/CD), and agile methodologies, HIPAA

Java Full Stack Developer | Beazley

West Hartford, Connecticut. USA

Dec 2022 - Oct 2023

Description: Beazley plc. is a British specialist insurance company it offers a wide array of specialty insurance products, including cyber insurance, political risk, healthcare liability, professional liability, and marine.

Responsibilities:

- Work with **modern JavaScript** frameworks such as **Angular**, **React**, or **Vue.js** to develop dynamic, responsive user interfaces
- Ensure **seamless integration** of the **front-end with backend services**.
- Collaborate with **UX/UI designers** to ensure the application is **both visually** appealing and **user-friendly**.

- Develop and maintain Java-based backend applications using technologies like **Spring Boot**, **Spring MVC**, **Hibernate**, and **RESTful APIs**. Implement business logic and ensure that the backend services can handle complex insurance-related operations efficiently using Java 11/17, Spring Framework, and Hibernate.
- Ensure **integration** with various databases like **MySQL**, **Oracle**, or **PostgreSQL**, and manage data flow between front-end and back-end systems. Be involved in continuous integration/continuous deployment (**CI/CD**) processes, using tools like **Jenkins**, **Docker**, **Kubernetes**, and version control tools like **Git**.
- Involved in the analysis, **design**, and development and **testing** phases of **SDIC**.
- Developed **N-tier** client-server business application **software** using **Model View Controller** (MVC) Architecture.
- Extensive use of core **Java Collections**, **Generics**, Exception Handling, and **Design Patterns** for **functionality** Involved in writing **different** Design **Patterns** like **Filter Action**, **Business Delegate**, Service Locator **Data Transfer Objects (DTOs)** and **Data Access Objects (DAOs)**. Leveraged Confluence to create and share knowledge bases, documentation, and project collaboration spaces.
- Used **Hibernate** in **persistence** layer and developed **POJO's Data Access** Object to handle **database** operations.
- Worked on System security with the use of **SSL** (Secure socket layer). encryption and used **role-based security**.
- **JSON** being light in **nature** was used as the chief **source** of communication between the server and application.
- Spearheaded mobile development projects, ensuring seamless system integration and implementing infrastructure-as-code (IaC) best practices to drive efficiency, scalability, and reliability across the technology stack.
- Expertise in developing **reusable** and interoperable **Web service** modules based on **micro services** SOA **architecture** using **SOAP** and **RESTful** and Preparation of **java** and **JSP** coding standard **checklist**.
- Involved in the development of **Servlet** Struts Action classes **Business Objects**, **Web Services** and writing **JSP** using Bean Logic **HTML**, and **Iterate Tags**. Used the **spring validation** and **Tiles Framework** in the **presentation layer**.
- Experienced in Java Reactive programming using **Project Reactor** or **RxJava**, and knowledgeable of Spring Boot starters and auto-configuration features **user interaction design**, project planning, and troubleshooting, with expertise in testing frameworks, monitoring tools, and messaging systems. Used **Log4J** to capture the logging information.
- Developed and implemented end-to-end solutions using **Schematics**, **SVN**, **Zigbee**, and **Go**, ensuring that all projects met the required acceptance criteria and delivered high-quality results.
- Developed user interface using **JSP Spring** Tag Libraries to simplify the **complexities** of the application Developed user interface with **java Server Pages Ajax** support to speed up the application form filling **WSDL** has been used to expose the **Web Services**,
- Used **Apache Axis** as the **Web Service framework** for **creating** and consuming **Web Service** clients using **SOAP** and **WSDL**
- Implementing or exposing the **Micro services** to base on **RESTful API** utilizing **Spring Boot** with **Spring MVC**
- Used **Hibernate** Transaction Management **Hibernate** Batch Transactions, and **Hibernate cache** concepts. Developed Struts **Action Forms** Action classes and performed action **mapping** using Struts and various **tables** required using **Oracle database**
- Used **Apache** Tomcat server for deploying the application, **involved** in writing the Maven **build** file to build and deploy the application, Involved in writing **JUnit** Test Cases and **Ant Build Script**.

Environment: Java, JSP, HTML, CSS, IAM, Servlets, XML, SOAP, WSDL, Oracle, Eclipse, JAX-R, JAX -WS, PUSQL, Apache Server, Struts, DAO AOP Spring MVC Spring, Hibernate, JUnit, Maven.

Java Full Stack Developer | State street

 **Bengaluru, India**

 **Jun 2021 - Aug 2022**

Description: State Street Corporation is a prominent American financial services and bank holding company.

Responsibilities:

- **Developing** and maintaining the backend using Java 22, including Spring Boot, Hibernate, and other enterprise-level frameworks for building RESTful APIs and microservices.
- Implementing user interfaces with **JavaScript** frameworks using **Angular**. Worked with **HTML5**, **CSS3** responsive design techniques. Integrating **backend** services with **frontend** frameworks and ensuring **smooth data flow** between **server & client**
- Writing efficient **SQL queries**, and working with **databases like MySQL** Server for data storage, retrieval, and manipulation, in some cases, working with NoSQL databases such as MongoDB for unstructured data.
- **Creating** and **optimizing RESTful APIs** for services that enable **front-end systems**, client applications, and third-party integrations to communicate backend systems. Ensuring **APIs** meet high standards for **scalability**, security, and performance.
- Working in **Agile** Scrum teams to deliver **incremental** updates and features while collaborating with cross-functional teams, including QA, DevOps, and product management. Participating in daily stand-ups, **sprint planning**, and **retrospectives**.

- Ensuring that financial data is **handled** securely by implementing **encryption, authentication**, and other **security** measures.
- Worked in a **Waterfall** environment and **participated** throughout the **SDLC process**. Complying with regulations such as **GDPR, PCI-DSS**. Experienced with **containerization (e.g., Docker)** and orchestration tools (e.g., **Kubernetes**) is often needed.
- Working with **cloud** platforms such as **AWS, Azure, or GCP (Google Cloud Platform)** for **hosting, scaling, and maintaining applications**. Utilized JIRA to manage agile projects, track issues, and optimize team workflows.
- Creating production and test batch jobs using parallel programming in python using control-m. Developed and maintained **WIKI** pages to document technical guides, process manuals, and organizational knowledge.
- Utilized expertise in session management, identity and access management (IAM) tools like **OKTA** and **SIEM** solutions including Splunk, to design and implement robust security architectures, while leveraging ELK (Elasticsearch, Logstash, Kibana) stack for log management and analytics, and applying OAuth for secure authentication, with thorough unit testing using **Mockito**
- Experienced in developing UNIX shell scripts for batch processing and Python scripts. Implemented Struts **MVC Design** pattern for the **Application** for the **front-end** appearance and **log in Screens**.
- Developed the **view-controller** components using **Servlet/JSPs, JavaScript CSS and HTML**. Wrote **client-side** validation in **Java Script, Developed JSP** | Action **servlet classes**. Involved in creating **JSP** pages for presentation of the **data** to the end user.
- Involved in **CI/CD** process using **GIT**, Nexus, **Jenkins** job creation, Maven build Create **Docker** image and deployment in **AWS** environment, Wrote **PL/SQL** stored procedures Prepared statement and used **APL**
- Applied **J2EE** design patterns such as **MVC, Singleton, and Data Access** Objects in the architecture. Used Firebug to keep track of **issues**, Developed the whole project on **Eclipse JOE**. Implementing Log4j for **logging** and **debugging**, Prepared JU nit test cases and executed the test cases using JUnit. Involved in bug **fixing** during the **System testing**, joint System testing and User **acceptance** testing. Developed applications using Application **lifecycle** Management to deliver **reliable** applications.

Environment: Java HTML, Git, JSP, Servlet EJB, Struts, JDBC, Oracle Si WebSphere Application Server ANT JUnit Java Script, Rational Rose, Python, Dream Weaver, CSS, GCP, Ant Log4j Fire bug, Eclipse, CI/CD

Java Developer | BEML Limited

 **Bengaluru, India**

 **Apr 2019 - May 2021**

Description: BEML Limited, formerly known as Bharat Earth Movers Limited, is a leading manufacturer of heavy equipment in India.

Responsibilities:

- Designed, developed, and implemented Java-based applications using **Java 11 and Java 17, Spring MVC and Spring Boot** that meet requirements, including tools for machinery control, data management, and process optimization.
- Worked with relational databases such as **Oracle** or MySQL to store and retrieve data required by applications using SQL.
- Wrote and optimized SQL queries for efficient data management and integration with Java applications using **Hibernate, J2EE, RESTAPI creation, REST Web Services, SOAP, and XML**.
- Developed APIs and other integration points to connect various systems and automate workflows using **RESTAPI creation, REST Web Services, SOAP, and XML**.
- Implemented a CD pipeline with **Docker** for custom application images in the cloud using Jenkins, **Java Reactive programming**.
- Implemented GCP Cloud Solutions cloud SQL, Storage bucket, Cloud DNS, GKE Auto scaling groups in k8 cluster
- Experienced with Java frameworks like **Spring MVC, Spring Boot, and Java Reactive** for developing robust and scalable applications using **Functional programming** principles.
- Implemented Reacts Axioms Http Request to read data from web server and process JSON data to render in UI using **JavaScript, Nodejs, and AngularJS**. Familiar with Agile methodologies to adapt to changing project requirements.
- Developed GUI using **JSP, JSTL, AJAX, HTML, CSS, and JavaScript**. Implemented AJAX calls from backend without page refresh using **jQuery, AJAX, J2SE, Spring MVC, and Hibernate**.
- Involved in bug fixing during the **System testing, Joint System testing, and User acceptance testing**. Deploying the applications and binding third-party services like App Dynamics on **Pivotal Cloud Foundry (PCF)**.
- Implemented security best practices in coding and regularly assessed applications for vulnerabilities and compliance with **organizational policies**.

Environment: Oracle, MySQL, SQL queries, Java applications, APIs, integration, workflows, Docker, Jenkins, spring, Hibernate, scalable, Java frameworks, IAM, ServiceNow, Git, GCP, Reacts Axioms Http Request, JSON, AJAX, GUI, JSP, JSTL, AJAX, HTML, CSS and Java Script
