

PROFESSIONAL SUMMARY

- **Lead Software Quality Assurance Testing** professional with 9.5 years of experience in **Requirement Analysis, Test Plan formulation, Test Design, BDD and QA Manual/Automation** Testing of Web based application & Client/Server applications.
- Experienced in Software Development Life Cycle (SDLC) and Software Testing Life Cycle (STLC) Including Risk Analysis, Process Planning, Test Design, Performing Testing, Defect Tracking tools like JIRA, Management and Test Reporting, Traceability matrix.
- Experience in Automation testing using **Selenium WebDriver, TestNG, Maven, Cucumber, Junit, Jenkins, Appium, SOAP UI, Postman, Rest-Assured, GitHub.**
- Expertise in creating and executing **Selenium WebDriver test cases** with C# & Java programming language.
- Sound knowledge on **Junit, TestNG** framework for **Unit testing, Maven** for Project building tool, **Jenkins** for **Continuous Integration.**
- Expert in integrating Automation scripts (Selenium WebDriver API) on **Continuous Integration** tools **Jenkins** for nightly batch run of the Script.
- Good experience in **Selenium Test Environment** setup expert using the entire open source tools. Excellent knowledge in writing unique **XPath** to identify **web elements.**
- Proficient in building Automated test scripts using **Selenium-Cucumber** with **JAVA** with maven dependencies and source control through **GIT.**
- Good knowledge in DevOps concepts and working knowledge on **Continuous integration** and **Continuous delivery (CICD)** by using tools like **Jenkins.**
- Experienced in making **Behavior Driven Development (BDD)** and **Test-Driven Development (TDD), Page Object Model (POM)** framework to maintain test suite.
- Experience with comprehensive understanding of all phases of **Test Life Cycle**, including requirements gathering, test planning and scheduling testing defect tracking, and reporting.
- Expertise in **Automation Testing, Manual Testing, API Testing, Smoke Testing, Installation testing, Sanity testing, Functional testing, Retesting, Regression testing, System testing, GUI & Browser compatibility testing** and Documentation testing, **Ad-hoc testing, End-to-End Testing, UAT testing, Black box and white box testing.**
- Experienced in **API Testing** for multiple **Microservice's** using tools **Swagger, Postman** and **Insomnia.**
- Experience in **RESTful API** and used **HTTP** requests to **GET, PUT, POST** and **DELETE** data
- Extensive experience with **SOA** architecture which include **Soap Web Services, SOAP** and **REST API** Testing using **Restful API** and **SoapUI.**
- Experience with **Rest Assured** for test automation of **REST API test Automation.**
- Good experience in **Web Services** testing using **SOAP UI, XML, & WSDL.** Providing required input data to request XML & get the required data from response **XML & use the response data from other request XML using SOAPUI.**
- Experience in core **AWS Services S3** bucket to validate generated XML files
- Proficiency in using Git, GitHub, BitBucket, Azure for version control, and Jenkins, **Azure** pipelines for Continuous Integration objectives.
- Proficient in developing & executing **SQL Queries** for Testing the **Database.**
- Experience using **ETL Snap** logic tool to load the data from Source to Destination Database
- Good programming skills in Java, C, C++, VB, Oracle, SQL, and PL/SQL and experience in SQL Server, Access and Oracle Databases.
- Expertise in back ends testing and writing **SQL queries, Joins, procedures** using Oracle and MySQL
- Expertise in writing **SQL queries, SQL scripts** and performing Database Testing in different RDBMS like Oracle and MySQL
- Broad based knowledge of **Unix/Linux,** network administration, and shell scripting.
- Experience in monitoring tools such as **Kibana & Dynatrace**
- Expertise in documenting defects with high level of detail, accuracy, and informative recreation steps using **Quality Center, JIRA.**
- Working knowledge in **JIRA** for bug tracking and reporting and follow up with the development team to verify bug fixes and update bug status.
- Experienced in using defect tracking tools such as **HP Quality Center (QC)/Application Life Cycle Management (ALM), Rally, JIRA, Bugzilla, Team Foundation Server (TFS).**
- Well experienced in implementation through **Agile** methodologies and actively participated in all **Scrum ceremonies.**
- Good analytical and communication skills and ability to work independently with minimal supervision and also perform as part of a team.
- Highly motivated team player with analytical, organizational and technical skills, unique ability to adapt quickly to challenges and changing environment.
- Excellent interpersonal skills, proven team player with an analytical bent to problem solving and delivering under high stress environment.

TECHNICAL SKILLS

- **Programming Language:** Java, JavaScript, TypeScript, HTML, CSS, Python
- **Testing Tools:** Selenium Suite (WebDriver, Selenium Grid, Selenium IDE) Testing, TestNG, Maven, Cucumber, Appium
- **Framework:** TestNG, Cucumber (BDD), Data Driven, Hybrid Framework, Junit (TDD), Page Object Model (POM)
- **Office Tools:** MS-Project, MS-Office, MS-Word, Excel, PowerPoint.
- **Databases:** Oracle, MySQL, RDBMS, SQL Server, MS Access
- **Build Tools:** Maven
- **CI/CD Tools:** Jenkins
- **API Tools:** RESTful, Postman, REST-Assured, Swagger, SOAP UI, JSON
- **Methodologies:** Agile-Scrum
- **Cloud:** AWS, Azure, Ansible, Docker, Kubernetes
- **Test Management:** JIRA, Quality Center, ALM, Zephyr
- **Software Testing Life Cycle Skills:** Planning, Strategy, Design, defect, Metrics, Process
- **AI-Assisted Coding:** Experienced in leveraging GitHub Copilot for writing and optimizing test scripts.

Certification

- **ISTQB (International Software Testing Qualification Board) Certified Tester**
- **Certified SAlFe 6 Product Owner/Product Manager**

PROFESSIONAL EXPERIENCE

Project: DIRECTV

Partner: Cognizant Technology Solution (CTS)

Organization: Zentech Consulting Inc

Role: Lead QA Automation Engineer

Duration: Nov 2023 – Current

Description:

Since 1994, DIRECTV has continually evolved their product, best-in-class content and service to provide customers an industry-leading video offering. DIRECTV offer nearly every American the ability to beam it or stream it. If you beam it over satellite, you have access to the industry's best picture format and exciting content in 4K HDR. If you stream it over virtually any internet connection, you can enjoy the best in Live TV and On-Demand either on your existing streaming device or on the DIRECTV STREAM Device. Those with the DIRECTV STREAM Device can build a complete, integrated and customized entertainment experience with the ability to watch and pause live TV on up to 20 devices in their home. It also allows consumers to get all their favorite entertainment in one place with easy access to apps like HBO Max, Netflix, Prime Video and more.

Responsibilities:

- Responsible for gathering business requirements and writing functional specifications and process documents pertaining to new customizations or enhancements.
- As a QA lead engineer, wrote Test plans, Test coverage Strategies and.
- Prepared **Test Plans, Test Scenario, Test Cases, Test Script, Test Summary Reports** and **Test Execution Metrics**.
- Request test data using tolls such as **TDAP, ATDM & ServiceNow**.
- Managed test data for **frontend** and **backend** service testing
- Involved on testing the new functionalities based on test cases and coordinated with development team in fixing the issues.
- Designed and implemented test **Automation framework, Automation Test Scripts**, including implementing Page Object Model, Page Object Factory Framework, Data Driven using **Selenium Web Driver, Java, TestNG**.
- Using **Data-Driven** Framework with Apache POI to read the data from Excel file and write the data to Excel file.
- Implemented Automated execution of tests (nightly and need based) using **Maven** and **JENKINS**.
- Used **Java** language and **TestNG** framework for scripting. Used Maven for building the WebDriver project. Used **Maven** for building the WebDriver Project. Integrated with Continuous Integration tools **Jenkins** for running test on nightly basis automatically.
- Used automated scripts and performed functionality testing during the various phases of the application development using **Selenium**.
- Used **TestNG** framework to run unit test and **Maven** to build the Project.
- Implemented open source web test tool **Selenium WebDriver** for cross browser and cross platform web testing.
- Responsible for maintaining daily Smoke Test on **Jenkins** and debug failure build on Jenkins and reporting the issue.
- Developed and automated Test cases, created Behavior- Driven Framework (BDD) using **Cucumber** with **Gherkin**
- Involved in **API designing**, requirement gathering and transformation of API design to their implementation.
- Performing API testing by using **Postman, Swagger**, for **RESTful API** service to validate Endpoints Request and Response.
- Coordinated **Integration testing** activities with other development teams and **upstream/downstream** application test teams.
- Using **HTTP** request for **RESTful API** to **GET, PUT, POST** and **DELETE** data.
- Created, updated & and maintained automation scripts for **REST-API** testing using **REST Assured** framework.
- Experience in monitoring tools such as **Kibana & Dynatrace..**
- Execute the tests, validate the microservices logs using **Kibana** and demo the tests to product owner.
- Deep diving in logs using **Kibana** for the root cause of issues
- As a team always helped team members like -developers, helped them on their code deployment and test it, used to perform Sprint User story tests on **DEV-ENV & TEST-ENV** and later on for regression Testing used **STAGE-ENV**.
- Involved in **Production defects management** and **support**.
- Provided Daily updates whenever a environment was down/up because as a backend team, other teams were depended on us.
- Involved in setting up **CI/CD pipelines** system using **Jenkins** and working knowledge with cloud based code repository system like **Codecloud**.
- Responsible for writing SQL queries to find out correct data for testing in **MS SQL Server environment**.
- Involved in querying **SQL** and updating records and validate database records as expected
- Performed Backend testing, database table manipulation of relational database systems (RDBMS) by writing complex SQL query & Big Query
- Performed Daily Defect Validation based on the new bugs, updating and closing the **Jira** with proof.
- Performed Daily Defect Validation and incase of failure, reopening the **Jira** and assign to developer
- Performed **Smoke testing, Redface Testing, Installation testing, Functional testing, Retesting, Regression testing, Ad-hoc testing, End-to-End Testing, UAT testing, black box/grey box testing**.
- Conducted thorough **manual testing** of new functionalities and enhancements to existing functionalities.
- Log the defects in **JIRA** and maintained track of the user stories throughout the Software Testing Life Cycle (STLC).
- Involved in updating /creating the traceability matrix using **Jira story cards, testcases** and BugID's

- Worked in a fast pace **Agile** environment (2 weeks of sprint), Attended sprint planning on the beginning of each sprint and retro at the end of each sprint and in the middle, we had mid sprint review/product backlog review (PBR) meeting to go over to our backlog and prioritized User stories and estimated points.
- Participate to all **Scrum Ceremonies** such as Daily standup meeting, Sprint planning meeting, Backlog Refinement meeting, Retrospective meeting and demo session in **Agile** methodology.
- Before Release used to sync up with product owners (P.O) for daily status reports.
- Extensively performed **Manual Testing** process to ensure the quality of the software.

Environment:

Java, Javascript, Spring Boot, Cucumber, Selenium Web Driver, Maven, Jenkins, TestNG, JUnit, Jira, Zephyr, GIT, Web services, REST APIS, Rest Assured, Postman, Swagger, SQL, Microsoft SQL Server Management Studio, Microsoft test Manager, Customer Relationship Management (CRM), Agile (Scrum).

Project: PRIDIKT, TX

Organization: Zentech Consulting Inc

Role: Senior QA Automation Engineer

Duration: Mar 2023 – Nov 2023

Description:

PRIDIKT is a special purpose-built software using IoT and Artificial Intelligence to digitize the Industrial operations for front line workers and provide the easy-to-use voice enabled guided procedure steps. PRIDIKT enables the front-line workers to create the workflow into Mobile applications in minutes and deploy to the mobile phones.

Responsibilities:

- Involved in requirements gathering sessions with Business Analysts and product owners to define the business requirements.
- Worked with developers and other QA team members to define test requirements and developed test cases based on the business requirements.
- Implemented **Page Objects, Data Driven, Keyword Driven, Hybrid** automation frameworks using **Selenium**.
- Created & Maintained **Automation Selenium Automation Scripts** for the Scrum Stories.
- Automated highly transactional web application using **Selenium Web Driver**.
- Execution of automated Test Scripts through **Maven**. Used Maven for building the **WebDriver** project.
- Tested compatibility of application for dynamic and static content under various cross browsers using **HTML** ids and **XPATH** in Selenium.
- Integrated with Continuous Integration tools **Jenkins** for running test on regular basis automatically.
- Also responsible for converting automation scripts to new framework using **Selenium WebDriver, Java and TestNG/Junit**.
- Assisted Manager by providing automation strategies, **Selenium/Cucumber Automation** and **JIRA reports**.
- Configured and automated **Feature Scenarios** using **Selenium WebDriver, Cucumber, Gherkin** and **Maven**.
- Developed BDD tests using Cucumber by writing behaviors and step definitions. Developed required Selenium support code in **JAVA** for **Cucumber**.
- Developed and automated Regression Tests, created **Behavior- Driven Framework** using **Cucumber** with **Gherkin**
- Experience in using **Jenkins** as a Continuous Integration server to configure with **GitHub** and **Maven**.
- Executed the test plans on web and mobile (**Apple & Android**) as per requirements using **Appium** tool.
- Handled with HP **ALM** for report defects and verify defect fixes.
- Implemented simulator for Mobile App Testing in Android Platform using **Appium**
- Experienced in load and performance testing tool **JMeter**.
- Written gherkin scripting automation test scripts to execute in **Cucumber**.
- Created **JSON POST** and **GET** requests for **RESTful API** services using **POSTMAN & Swagger** to assert responses.
- Used **SQL** Server Management Studio to query the **SQL** Server database to verify the data accuracy and integrity.
- Used **CRM** to create the cases and verify the customer created cases.
- Reported software defects in **Jira** and interacted with the developers to resolve technical issues.
- Followed Agile Testing methodology, participated in daily Scrum meetings and testing each Sprint deliverables.
- Developed Scenarios for writing **Test Cases** and **Test Scripts** for functions of the application.
- Extensively involved in **Smoke, Functional, Regression, End-to-End Testing, black box/grey box testing** and monitored the behavior of the applications during different phases of testing.

Environment: Java, Javascript, Spring Boot, Cucumber, Selenium Web Driver, Maven, Jenkins, TestNG, JUnit, Jira, GIT, Appium, Web services, TFS, SQL Server, Microsoft SQL Server Management Studio, Microsoft test Manager, Customer Relationship Management (CRM), Agile (Scrum).

Project: WideOrbit, CA

Organization: Aspire System Inc

Role: QA Automation Engineer

Duration: Dec 2018 – Feb 2023

Description:

WO Media Sales is a robust order management system that helps publishers manage the entire ad sales cycle from opportunity and order to invoice and analysis. It Unites sales, ad operations, and finance on a single solution to simplify complex workflows, increase efficiency, and drive revenue growth.

Responsibilities:

- Gathered all the requirements from Functional Requirements documents.
- Developed Manual Tests by analyzing product use cases, and requirements as well as technical design and implementation artifacts to create test cases that execute the specific product functions.

- Responsible for Reviewing and documentation for reporting the status to the QA Project manager.
- Created whole test framework using **Selenium WebDriver** for further test creation and execution.
- Design and develop **Page Objects** using **Page Object Model** design pattern and **Selenium WebDriver**
- Extensively involved in identifying test cases to automate. Automate those test cases using **Selenium WebDriver**, **TestNG** and **Java (Eclipse IDE)**.
- Responsible creating the functional testing framework using **TestNG** and using **Selenium WebDriver** for writing Automated Scripts with Java.
- Maintained and executed **Maven build files** for running automated tests.
- Used **Maven** to help manage projects build, report and documentation across the network
- Contributed to the **Continuous Integration** pipeline running component builds, creating and running Deployment jobs on individual stages on **Jenkins**, and running automated and manual functional tests.
- Integrated Automation scripts (**Selenium WebDriver API**) on **Continuous Integration tool Jenkins** fortnightly batch run of the script.
- Performed **GUI, Functional and Regression** testing by automated using **Selenium**, **TestNG**, **Maven**, and **Jenkins**
- Using **Postman & Swagger** for RESTful API service.
- Good knowledge and proper understanding of **Azure Data Factory (ADF)** such as mapping data flows, pipelines.
- Used **Azure DevOps** to log bugs and track tasks.
- Integrated automation tests in continuous integration tools **Azure Devops** and **GitHub Actions** for nightly consignment run of the script.
- Developed and Executed Test cases, Test conditions, Test Scripts using **TestLink** for **Functional, Integration, Regression, Smoke, Database Integrity** and **System testing**.
- Collaborated with development and QA team to write highly detailed test plans and writing test cases using **Quality Center**.
- Used **SQL Queries** to retrieve the data from the table and to perform Backend Testing.
- Developed **SQL Queries/SQL Procedures** to test data load.
- Played a key role in production releases and perform UAT test of the system.
- Log the defects in **JIRA** and maintained track of the user stories throughout the Software Testing Life Cycle (STLC).
- Used **GIT** repository as Version Control.
- Worked with an integrated team of developers, project managers, and business and testing analysts.
- Contributed to Team Effort by accomplishing related results as needed.
- Prepared reports by collecting and summarizing information to include providing accurate data for project reporting as well as a weekly personal status report to in the assigned template format.
- Worked in cooperation with all members within organization and project.

Environment: Java, Javascript, Selenium WebDriver, Page Object Model (POM), Jenkins, web applications, TestNG, Maven, SOAP UI, Rest Assured, Postman, Swagger, Quality Center, Jira, Microsoft Test managers, Eclipse, XPath, Git, Oracle, SQL and Windows.

Project: Savvas Education Services, NJ

Organization: Aspire System Inc

Role: Junior QA Engineer | Jan 2016 – May 2016

Role: QA Automation Engineer | June 2016 – Dec 2018

Description:

Savvas Education(Realize) is a British-owned education publishing and assessment organization providing service to schools and corporations, as well as directly to students. Realize project is to provide e-learning service to students through different schools with a license..

Responsibilities:

- Reviewed and analyzed the Business requirements and Functional requirements to better understand the client needs.
- Participated in meetings with Business Analyst and Developers to understand the scope of testing.
- Created Test Plans, Test Scenarios and Test Cases for assigned modules as well as verify the actual result based on the expected results.
- Regression test cases were written and automated using **Selenium WebDriver**.
- Created and enhanced numerous test scripts to handle changes in the objects, in the tested application's GUI and in the testing environment using **Selenium**.
- Involved in setting up configuring the testing environment with **Eclipse, JAVA, Selenium Webdriver**.
- Performed Smoke, GUI, Functional, Performance, Integration and Usability testing.
- Developed the test cases using **Selenium** according to functional specification and requirements.
- Used **Selenium** and checked the functionality of the application for every release.
- Performed SOA / web services testing using SOAP UI; wrote adaptors to test / invoke web services
- Validation of data through SQL queries.
- Involved with working in all phases of SDLC methodologies.
- Involved in extensive Interactive and manual testing of the product using **Quality Center**.
- Involved in execution of Test cases and reporting defects and tracking them to closure.
- Actively Participated in Business requirements review meeting and weekly team meeting.
- Involved in implementation of the system and making sure that the product met the required user specification.
- Performed Data Validation and Data Integration for Back End testing using SQL Queries.
- Performed Database testing by executing SQL queries/Procedures.

Environment: Java, Selenium, Agile, JIRA, Junit, SOAP UI, XML, Oracle, Windows, LINUX.

EDUCATION:

- Bachelor of Technology in Information Technology, Anjalai Ammal Mahalingam Engineering College/Anna University/2016/India
