

DAVID VACCA

DevOps Engineer

773-220-7053 | davidvaccat@gmail.com | Chicago, IL | [linkedin.com/in/davidvacca](https://www.linkedin.com/in/davidvacca)

PROFESSIONAL SUMMARY

Seasoned DevOps Engineer with over 5 years of experience orchestrating, adapting, and creating cost-effective solutions on AWS. Proficient in deploying automation and infrastructure as code, reducing downtime, and improving performance. Successfully implemented CI/CD pipelines, decreasing release time by 30% and manual effort by 50%. Skilled in Kubernetes, Packer, Terraform, and other contemporary tools, consistently improving processes. Committed to continuous learning, staying updated on industry trends, and collaborating effectively within teams.

SKILLS

Amazon Web Service (AWS) | Kubernetes | Terraform | CloudFormation | Kubernetes | Helm | Packer | ArgoCD | Docker | Docker compose | CI/CD | Git | GitHub | GitHub Actions | GitLab | GitLabCI | Bash/Shell | Python | Datadog | Prometheus | Grafana | ElasticSearch (EFK) | Ansible | MYSQL | PostgreSQL | Linux | Atlassian Jira | PagerDuty

WORK EXPERIENCE

Guardian Life | Chicago, IL
DevOps Engineer

Feb 2021 - Present

- Applied GitOps principles in GitHub Actions CI/CD for AWS infrastructure, optimizing resource management across development and production environments, which reduced release times by 30 % and manual intervention by 50 %.
- Built Amazon EKS cluster with Terraform, overseeing multi-environment configurations to enhance infrastructure resilience and security posture, leading to a 20% reduction in infrastructure downtime incidents and a 15% decrease in security vulnerabilities across all environments
- Architected autoscaling groups for EKS, integrating spot and on-demand instances, resulting in a 30 % reduction in EC2 instance utilization cost while maintaining 99.8 % availability.
- Implemented least privileged access in Amazon EKS using service accounts and IAM roles, thereby enhancing security and access control, while reducing unauthorized access attempts and improving compliance metrics.
- Built and maintained CI/CD pipelines utilizing Helm charts, GitHub Actions, and Argo CD, delivering improved efficiency and automation for deploying and managing containerized applications.
- Implemented Kubernetes cluster autoscaling, dynamically adjusting resources based on demand through both cluster and horizontal pod autoscaling techniques, leading to efficient resource utilization that effectively manages sudden spikes in traffic.
- Automated deployment of a Node.js application on AWS EC2 using AMIs created via Packer, with Terraform handling infrastructure setup, and reduced deployment time by 50% compared to manual deployment timeframes.
- Implemented Datadog for infrastructure and application monitoring, optimizing performance, configuring metrics collection, log management, and establishing customized dashboards and alerting mechanisms.

Hulu | Chicago, IL**DevOps Engineer**

Jan 2020 - Feb 2021

- Configured GitLabCI to automate builds for Node.js and Python applications, including post-deployment health checks for enhanced reliability.
- Orchestrated the migration of monolithic applications to microservices through the implementation of containerization strategy, resulting in improved workflow efficiency, scalability, and reliability.
- Established an EFK stack within the Kubernetes Cluster to monitor web application logs, enabling comprehensive log analysis and facilitating efficient troubleshooting and performance optimization.
- Implemented Prometheus and Grafana for monitoring the AWS EKS Kubernetes cluster, reducing operational costs 35 % and enhancing efficiency.

Junior DevOps Engineer

Mar 2019 - Jan 2020

- Configured and managed various cloud services on AWS including EC2, Route53, S3, RDS, DynamoDB, IAM, ELB, EBS prioritizing high availability, fault tolerance, and automated scalability resulting in optimized system reliability and performance.
- Designed Terraform modules for infrastructure provisioning, covering essential resources such as VPC, autoscaling groups, and ELB, ensuring consistent and scalable deployment of infrastructure components.
- Configured IAM roles with the least privileges in AWS Organization, ensuring the security of sensitive resources and data.

EDUCATION & CERTIFICATIONS

Certified Kubernetes Administrator - CKA	2023
Certified Kubernetes Application Developer - CKAD	2023
Bachelor's Degree Graphic Design University Jorge Tadeo Lozano	2014
