

Sirisha M
Msirisha896@gmail.com
925-587-6462
Java Full Stack Developer

Professional Summary:

- Over 5 years of experience in design, development experience with Java, J2EE and MVC Frameworks.
- Experience in implementing Java, and J2ee design patterns such as Singleton, Session Facade, business delegate, and factory.
- Designed and implemented highly efficient and rich UI components using JSP, HTML, CSS, JavaScript, and Angular.
- Extensive experience in build, release, and configuration management processes.
- Strong Experience in UI, Angular 12, AngularJS, ReactJS, and NodeJS framework.
- Proficient in using RDBMS concepts and have experience in working with multiple relational databases such as Oracle, DB2, MySQL, and NoSQL databases like MongoDB, Cassandra DB, and Couch DB.
- Extensive working knowledge in UNIX, LINUX, and Windows platforms
- Having knowledge of Java 1.8 features like Lambda expressions and functional interfaces, and Parallel Streams.
- Diverse experience utilizing tools in Microservices architecture applications using Spring Boot, Spring Cloud config, AWS, My SQL, and Restful Web Services.
- Experience in working with IDEs like Eclipse, JBoss Dev Studio, Net Beans, and IntelliJ.
- Experience in using Web Services like JAXP - DOM, SAX, XSLT, JAXB - Un-marshalling and marshaling, SOAP protocol in JAX-WS, and RESTFUL web services.
- Experience in Spring Framework modules such as Spring MVC, IOC, AOP, JDBC, JTA, IO, Spring Boot, Spring Microservices, Spring REST, Spring Eureka, Consul, Swagger UI, Sleuth, and Spring Zuul.
- Experience in developing the application with Agile Methodology, Waterfall Methodology, and Test-Driven Development.
- Top quality architecture and development skills using the latest technologies including Java, Spring Framework, Hibernate, and in-depth knowledge of J2EE.
- Have knowledge of Kotlin Android Extensions framework.
- Expertise in Angular framework and its ability to create simple and scalable code for SPA.
- Worked in Angular 9 to Angular 12 for developing apps, custom components, services, directives, and routing, testing.
- Strong skills in J2EE Technology with knowledge in Core Java, multithreading, EJB, JSP, Servlets, Hibernate, Struts, Spring, and Web Services.
- Experience and in-depth Knowledge of understanding the strategy and practical implementation of AWS Cloud-Specific technologies including EC2, EBS, S3, VPC, RDS, SES, ELB, Cloud Front, Cloud Formation, Elastic Cache, Cloud Watch, Redshift, Lambda, SNS, Dynamo DB.
- Experienced in developing UNIX shell scripts for batch processing and Python scripts.
- Implement ad-hoc analysis solutions using Azure Data Lake Analytics/Store, HD Insight
- Expert in creating unit tests by using Junit, Mockito in test driven development (TDD) approach.
- Experience in using version control and configuration management tools like GitHub, SVN, and CVS.
- Solid Java OOP programming skills like multi-threading, class loading, and generics
- Good experience in implementing reactive programming using core Java to manage asynchronous tasks and events.
- Understanding of Cloud Environments like AWS, Azure, and PCF Pivotal Cloud Foundry.

TECHNICAL SKILLS:

Java Features	Java 7,8,11
Front-end Technologies	Node.js, HTML5, CSS3, JavaScript, TypeScript, Bootstrap, jQuery, SASS/LESS, Web pack, React JS, Angular JS (V2, V1.5)
Spring Ecosystem	Spring AOP, Spring MVC, Spring Boot, Spring Microservices, Spring REST
API Development	Graph, Swagger, Postman
Web/System Architecture	Angular12 , React , Bootstrap, Redux
Cloud Infrastructure	AWS (S3, VPC, RDS, Cloud Front)
CI/CD Tools	Jenkins, Docker, Kubernetes, Bit bucket, Azure DevOps
ORM & Databases	Hibernate, Oracle, MySQL, MongoDB, PostgreSQL, DynamoDB, Cassandra
Build Tools	Maven, ANT, Terraform, Gradle
IDEs	STS, PyCharm, NetBeans, Web Storm, Eclipse, IntelliJ IDEA, JDeveloper
Application Servers	BEA WebLogic, JBoss, Web Sphere, Glassfish, Apache Tomcat
Messaging Solutions	Apache Kafka, Zero MQ, RabbitMQ, ActiveMQ, Java Message Service (JMS)
Version Control	GIT, SVN, Gitlab, GitHub, CVS
Logging Frameworks	Log4j, Log back, Log Faces, SLF4J
Bug tracking Tool	JIRA
Testing Tools	JUnit, Mockito, TestNG, Cucumber, Selenium

PROFESSIONAL EXPERIENCE:

ExWorks Capital, Chicago, IL

Jul 2022 – Till Date

Java Full Stack Developer

Responsibilities:

- Designed and developed various modules using Java 8/11, J2EE, JSP/Servlets, EJBs, XML, Web logic, and MVC.
- Designed application structure for implementation in Scala and Java on the Play framework.
- Developed application to view live logs of servers of ion for Production and Non-Production environments using Apache Shiro and Elastic search Log Viewer.
- Develop applications using spring boot, Microservices, Restful Web services, Java Script, Shell Scripting, Hibernate, Spring Data JPA, logging, and handling cache.
- Performed Service Level Testing for Web services using Soap UI, Postman, and Apigee and was responsible for redesigning the entire application using React Bootstrap v4.3 and CSS3.
- Added new components to the UI using Angular 12/10 framework, HTML, and CSS and developed a service using Java Spring Boot to interact with the UI.
- Created the Node.js EXPRESS server combined with Socket.io to build MVC frameworks NPM from front-end side AngularJS to back-end MongoDB.
- Using Hibernate as an ORM tool to store the persistence data in the Oracle 10g database.
- Involved in CI/CD process using GIT, GitHub, Nexus, Jenkins job creation, Maven build creating Docker image and deployment in AWS environment.
- Working on AWS services including AWS Code Build, AWS Code Commit, AWS Code Pipeline, AWS Lambda, API Gateway, AWS CLI, AWS DynamoDB, AWS RDS, Cloud Formation and Elastic search ECS, S3, IAM and Serverless Deployment.
- Experience providing Apigee Edge Platform diagnostic and troubleshooting ability complete code base conversion to React Native with feature parity.
- Involved in describing Controller for the Views using Angular JS to handle data binding between model and views. The developed layout of Web Pages using Tiles and CSS3.
- Created highly customized Spring Boot Microservices with Mule and Wrote UI automation for pre-prod and prod environments using Robot Framework.
- Designing and implementing solutions for test automation using Selenium and Java, Eclipse, and other IDE's.
- Responsible for monitoring the build job hosted on AWS using Jenkins, worked with Jenkins under the CI/CD pipeline providing continuous improvement to agile software development teams.
- Used to deploy the applications on EKS using Helm charts and established infrastructure and service monitoring using Prometheus.
- Developed mock data generation feature that is integrated with GraphQL IDE interface to allow users to send
- Queries against their custom-generated schema and render mock results in order to familiarize users with the GraphQL syntax.
- Develop Docker file for different endpoints and validate them through the docker-central to run the Jenkins job with the given parameter and deploy the job to the Kubernetes, Open Shift.
- Worked on extracting event data from the front end using Kafka REST proxy and Used Kafka frameworks for messaging and queuing.
- Build and maintain code repositories and code migrations using CI/CD strategies (GIT, GitHub, Bit Bucket, SVN, CSV, and Jenkins).
- Configured Splunk New Relic and Pager Duty through Terraform for Prod and Non-pro environments.
- Used Spring Tool Suite IDE (STS) to develop and debug the application and used Jira for story tracking and defect logging. Performed code review and unit tested the application using JUnit framework.
- Used Python Boto3 Libraries for automation of AWS lambda functions, and Terraform as infrastructure as code.
- Experience in migrating on-premise ETLs to Google Cloud Platform (GCP) using cloud-native tools such as BIG query, Cloud Data Proc, and Google Cloud Storage.
- Created AWS Code Builds and PR checks for repos using Jenkins's Groovy Script and assisted Product/Developers in debugging, testing, and updating the DMV Forms and their mappings using MySQL Workbench.
- Wrote a POC on Cucumber Framework for UI Automation using the BDD approach.

Environment: Java 8/11, spring, Spring MVC, Spring Boot, Jenkins, Python, AWS, GCP, AngularJS, Node JS, SOAP, REST API, JavaScript, Angular 12/10, J Query, Micro Services, Web Logic, CVS, Oracle, JUnit, Bootstrap, Kafka, UML, JSP, JSTL, Maven, CSS, JSON.

Lutheran HealthCare, Brooklyn, NY

Nov 2020 – June 2022

Java Full Stack Developer

Responsibilities:

- Implemented spring boot Microservices to process the messages into the Kafka cluster setup and implemented Kafka producer and consumer applications on the Kafka cluster setup with the help of Zookeeper.
- Core Java development and Support of Java/J2EE applications with emphasis on OOP-based web forms, business logic, and database

access components.

- Used in-built marketplace services of PCF for RabbitMQ, MySQL config. Restful APIs are created to handle real-time request/response.
- Created Directives, Services, and Filters using Angular JS with Typescript and Implemented React JS Controllers to maintain view data where the client implemented the UI using React JS.
- Created custom, self-contained, reusable, and testable Angular modules, controllers, directives, and services to implement key functionalities for customer account summaries.
- Involved in multi-tier Java and J2EE-based applications support, responsible for writing business logic using core Java, SQL queries for the backend RDBMS.
- Consumer API's communicate to other services or APIs via APIGEE proxy, and some consumers use Rabbit MQ as a medium to delegate messages.
- Worked in Stream of API for Bulk Data Operations on Collections and API improvements in Java 8.
- Worked in using React JS components, Forms, Events, Keys, Router, Animations, and Flux concept and Created typescript reusable components to consume REST API's using Component based architecture provided by Angular.
- Worked on Cassandra Data modeling and Cassandra Database administration.
- Design and develop spark programs to filter, and transform data using RDD, Dataset/Data Frame APIs.
- Worked with NoSQL database MongoDB and developed custom MongoDB applications specific to client needs and Developed PL-SQL store procedures to convert the data from Oracle to MongoDB.
- Working with OAuth 2 to provide authentication and authorization to Rest services by exchanging Access tokens.
- Used Amazon Elastic search service for application monitoring and full-text search and used GWT and Amazon AWS (EC2/S3/EBS) for prototyping and subsequent evaluation.
- Deployed the Spring Batch application on Pivotal Cloud Foundry (PCF) instance and bound the services like Java and PostgreSQL.
- Implemented REST Microservices using spring boot, generated Metrics with method level granularity and Persistence using Spring AOP and Spring Actuator.
- Setting up AWS Oracle RDS databases for new projects, using a data pump to migrate data to Relational Database Services (RDS).
- Used the Mongo DB cloud manager for managing and monitoring the MongoDB infrastructure and used cloud manager backup for data backup and data restoration.
- Implemented a production-ready, load balanced, highly available, fault-tolerant, auto-scaling Kubernetes AWS infrastructure and Microservices container orchestration.
- Developed REST API for test server for Express Router middleware-based API with MongoDB.

Environment: Java 8/11, spring, Spring, Spring Boot, React JS, Angular JS, SOAP, REST API, JavaScript, MongoDB, Micro Services, CVS, JUnit, Bootstrap.

First Family Insurance, Fort Myers, FL

Aug 2019- Sep 2020

Java developer

Responsibilities:

- Involved in gathering business requirements, analyzing the project, and creating use Cases and Class Diagrams. Used OOAD for building applications.
- Created sequence diagrams, collaboration diagrams, class diagrams, use cases, and activity diagrams using Rational Rose for the Configuration, Cache & logging Services.
- Developed SOAP Web services for getting information from third-party designed Frontend within object-oriented Java 5 Framework.
- Good knowledge and experience in Core and J2EE design patterns like Singleton, Abstract Factory, Builder, MVC2, Business Delegate, DAO, etc.
- Used the Spring JDBC for data retrieval from the database for various inquiries. Wrote complex SQL queries to retrieve data from the Oracle database.
- Designed and developed business and persistence layer components using MySQL ORM like Hibernate, Spring MVC, JPA, and Caching, Logging service using Singleton pattern, and Log4j front-end using struts framework.
- Involved in describing Controller for the Views using Angular JS to handle data binding between model and views. The developed layout of Web Pages using Tiles and CSS3.
- Worked on Spring Web Flow on Spring MVC to build an application from scratch using Spring XML configurations, and annotations.
- Designed and developed the project using an MVC design pattern and converted the monolithic app to Micro Services architecture using Spring Boot using app methodology.
- Implemented Restful web services API using HTTP and REST principles GIT used for defects, change tracking across the application wrote Junit test classes for the services, and prepared documentation.

Environment: Java 8, J2EE, spring, Spring MVC, Spring Boot, Hibernate, AngularJS, SOAP, REST, REST

API, JavaScript, J Query, Micro Services, CVS, JUnit, Bootstrap, Agile, UML, JSP, JSTL, Maven, CSS, JSON, Google Web Kit (GWT), ILOG, Web 2.0, Mantis, JQuery.
