

Sowmya Reddy Atla | Network/Cybersecurity

Jersey City, NJ, USA | +1 (508) 603-9696 | sowmya@aogjob.com | [LinkedIn](#)

Professional Summary

Cybersecurity Engineer with 4+ years of experience across multinational firms in the financial, technology, and media sectors, specializing in robust threat detection, vulnerability management, and network security. Demonstrated success in reducing security incidents by over 50% through the implementation of advanced tools like CrowdStrike EDR, Arctic Wolf MDR, and Forcepoint Data Security. Proven expertise in endpoint security, threat intelligence, and data loss prevention, with hands-on experience in AWS security, IDS/IPS, and firewall configurations across platforms. Skilled in advanced network architecture, including Cisco, Palo Alto, and F5 technologies, as well as critical protocols like BGP, OSPF, and VPNs. Adept in security frameworks such as ISO 27001 and HIPAA, delivering proactive measures that ensure compliance and fortify organizational defenses against cyber threats. Proficient in scripting with Python, SQL, and XML, along with extensive experience in SIEM platforms (Splunk, QRadar), enhancing security monitoring and incident response.

Technical Skill

Network Security & Infrastructure: Network Security & Infrastructure: Cisco Catalyst 9k, 6k series, Nexus 9k (Datacenter), Cisco ISR 3k, 4k series, ASR 5k, 9k, Palo Alto PA 400, PA 5000, PA 7000 (Datacenter), Panorama M-500, VM-300, VM-500, VM-1000, F5 Big-IP LTM 8800, 6400, GTM, ASM, APM, Access Gateway, Secure Gateway, Snort, Sourcefire

Endpoint Security & Data Protection: CrowdStrike Falcon, Windows, Linux, OSX, Forcepoint Data Security, AWS DLP, Websense, Symantec, McAfee, Arctic Wolf MDR, CrowdStrike EDR, IDS/IPS, Firewall Management

Identity & Access Management: ACACS+, RADIUS, Cisco ISE

Network & Traffic Analysis: Cisco ACL, Cisco DNA Center, SNMP, SolarWinds, Infoblox, GNS3, SNMP, OSI Model, TCP/IP, UDP, IPv4/v6, ARP, VLAN, STP, RSTP, OSPF, EIGRP, BGP, HSRP, GLBP, VRRP, DHCP, DNS, NAT, Syslog, IPsec, SSL VPN

Cybersecurity Frameworks & Compliance: NIST 800-171, ISO 27001/27002, GDPR, HIPAA, CIS Controls, STIX, TAXII, TruStar

Security Toolkit & Vulnerability Management: Nessus, OpenVAS, Black Duck, NetSparker, HP Fortify, Metasploit, Burp Suite Pro, SQLMap, Hydra, OWASP ZAP Proxy, IBM AppScan, DirBuster, Wappalizer, WebInspect, Nikto, Nmap, Netcat, Wireshark, Aircrack-ng, Splunk

Operating Systems & Databases: Windows, Linux, Unix, MacOS, MySQL, Oracle, MSSQL

Programming & Scripting: Python, JavaScript, XML, C#, SQL, WordPress, .NET

SIEM Solutions: HP ArcSight, Splunk, NetForensics, QRadar

Certification

- CCNA R&S: Routing and Switching Essentials
- Cybersecurity Essentials
- AWS Certified Solutions Architect – Associate
- CCNA R&S: Introduction to Networks

Education

Bachelor of Engineering in Computer Science

Jun 2021

Sphoorthy Engineering College Hyderabad, India

Work Experience

INFOGEN SOFTWARE SOLUTIONS INC

Client: JP Morgan Chase, USA (**Contract**)

Role: Cyber Security Engineer

Mar 2024 - Present

- Spearheaded comprehensive Information Security initiatives, enhancing Data Loss Prevention, Crowd strike Endpoint Detection and Response (EDR), Forcepoint Data Security, Arctic Wolf Threat Intelligence, AWS Security, and Vulnerability Management, resulting in a fortified security posture.
- Partnered with major clients (UHG, DreamWorks, GE, Hasbro, Atari) to develop and implement threat detection strategies, leveraging Arctic Wolf's Managed Detection and Response (MDR), reducing security incidents by 50%.
- Led vulnerability assessments for critical infrastructure using tools like Crowd strike, Rapid7, and Tenable Nessus, identifying and mitigating high-risk vulnerabilities across various industries, including media and automotive.

- Directed Endpoint Security management across multiple platforms (Windows, Linux, OSX), analyzing and triaging viruses, malware, and other security events via Crowd strike Falcon, ensuring robust network defense.
- Advanced data analysis and anomaly detection using XQL queries, Forcepoint's behavioral analytics, and Arctic Wolf's threat insights, significantly enhancing threat detection capabilities and incident response times.
- Conducted comprehensive security audits on AWS infrastructure, utilizing Scout Suite to recommend strategic upgrades that addressed critical vulnerabilities, integrating Forcepoint's cloud security solutions.
- Achieved a 99% reduction in false positive alerts and a 65% reduction in cyber-attack incidents through strategic rule optimization and event correlation across Crowd strike Falcon, IDS/IPS, and firewall platforms.

Version 1, India

Role: Cybersecurity Analyst

Jul 2021 - Jan 2024

- Spearheaded initiatives to proactively detect and neutralize phishing email threats, achieving a 30% reduction in successful phishing attempts through enhanced security measures.
- Revolutionized incident response protocols, resulting in a 40% faster reaction to security incidents and breaches, thereby minimizing potential damage and recovery time.
- Led vigilant monitoring efforts to detect signs of attacks, intrusions, or unauthorized activities, maintaining a 95% success rate in threat identification and network integrity.
- Directed the identification and eradication of numerous phishing domains targeting reputable organizations, cutting potential security breaches by 50% and bolstering overall digital security posture.
- Implemented blacklisting of approximately 1000 phishing domains, significantly diminishing the risk of security breaches by 70%.
- Managed and resolved escalated issues from global Google offices, ensuring timely and effective solutions with a 90% satisfaction rate.
- Transitioned to a specialized role within Gmail-Inbound Ops (Anti-Phishing team), dedicating efforts to mitigate phishing threats with a focus on maintaining operational standards and achieving targeted outcomes.
- Conducted comprehensive analyses of phishing email attacks and compiled detailed performance metrics reports, contributing to strategic decision-making and a 15% increase in operational effectiveness.

Role: Network (Security Engineer/ Administrator)

Jul 2020 - Jun 2021

- Designed and executed LAN/WAN network architectures across multiple environments, enhancing performance and scalability. Implemented key network monitoring tools such as SNMP Server, PRTG, Net Brain, and SolarWinds tool to optimize visibility and proactive management.
- Spearheaded network upgrades including the transition from Cisco Catalyst 6500 to Nexus 5K switches, and improved network efficiency through the strategic use of VLANs, trunking, and EtherChannel. Managed Quality of Service (QoS) settings on Cisco routers to prioritize traffic effectively
- Enhanced network security by managing robust configurations on Checkpoint firewalls, implementing IDS systems, and configuring access control lists. Successfully migrated to Palo Alto Firewalls (PA 5050 & PA 5260) using the PAN migration tool MT3.3.
- Administered OSPF routing for various operational scales, and configured critical network services including DNS, DHCP, FTP, and HTTP within a Windows environment. Developed comprehensive security policies including NAT, PAT, VPNs, route maps, and ACLs across diverse platforms.
- Deployed and maintained AAA servers (RADIUS and TACACS+) to secure authentication for remote VPN users, ensuring rigorous access control and enhancing network security infrastructure.
- Conducted extensive firewall configuration and management using Palo Alto devices, employing advanced features like App- ID, User-ID, and Content-ID. Performed detailed security log analysis with tools such as Splunk, ELK, and PAN-OS Commander.
- Installed and managed various Cisco Catalyst switches and orchestrated critical network protocols such as EIGRP and BGP. Configured IPSec Site-to-Site VPNs using 3DES and AES/AES-256 with Cisco ASA Firewalls for secure data transmission.
- Led the redesign of network infrastructures for small offices and campus branches, integrating changes that bolstered both voice and data systems. Managed F5 Big-IP LTM 1600 for optimal load balancing and high availability, and supported secure remote access with BIG-IP Edge Portal and Client.
