LinkedIn: [Sravan Kumar Repakula | LinkedIn](#)

Professional Summary:

- Over 3+ years of professional experience as a **Data Analyst** in **Healthcare** and **Banking domains** with a strong background in **data visualization**, **ETL processes**, and **business intelligence** tools, skilled at transforming raw data into actionable insights to support strategic decision-making.
- Proven expertise in **data analytics** and **data reporting**, leveraging tools like **Power BI**, **Tableau**, and **SSIS** to create dynamic dashboards and streamline **KPI** tracking for improved performance management.
- Proficient in **data ingestion**, **financial reporting**, and **statistical analysis**, with a robust understanding of **ERP systems** (SAP) and **CRM platforms** (Salesforce), driving data-driven results across various domains.
- Adept at applying **mathematics** and **statistics** to complex data sets, delivering insights that inform **risk management** and optimize **business processes**.
- Skilled in **project management** and the **SDLC**, consistently meeting deadlines and ensuring data solutions align with business objectives.
- Strong **problem-solving** and **presentation skills**, with the ability to communicate technical analyses effectively to both technical and non-technical stakeholders, supporting company-wide **decision-making** efforts.
- Highly knowledgeable in **business analytics** and **data-driven strategies**, utilizing **advanced data visualization techniques** to highlight trends and inform critical business decisions.

Technical Skills:

Programming Languages: SQL, PL/SQL, JAVA, Python, Scala, R.

Database: MySQL, SQL Server, PostgreSQL, NoSQL, Teradata, MS Access.

Data Visualization Tools: Tableau, Power BI, Excel.

ETL Tools: INFORMATICA 9, PySpark.

Big Data Tools: Hadoop, Spark.

Data Warehousing: Azure Databricks, Azure Synapse Analytics, Azure Data Factory and Data Lake Storage.

Operating Systems: LINUX, Windows, Mac OS.

Web Design & Technology: PHP, JavaScript, HTML, CSS, and XML.

Methodologies: Agile

Work Experience:

Business Intelligence Analyst | Paycor | Cincinnati, OH |

Feb 2024 – Present

The objective of the project is to develop a workforce analytics dashboard for Paycor's healthcare clients to optimize HR and payroll processes. This involves analyzing employee data, such as schedules, overtime, and turnover rates, alongside operational metrics like compliance adherence and staffing ratios. The project aims to identify trends and patterns that help healthcare organizations improve staff retention, reduce overtime costs, and ensure compliance with labor laws. Additionally, the dashboard provides real-time insights and predictive analytics to assist HR managers in making informed decisions about resource allocation, ensuring efficient workforce management while maintaining high standards of care and regulatory compliance.

Responsibilities:

- Developed and optimized **business intelligence dashboards** and **reports** using tools like **Tableau**, **Qlik**, **ThoughtSpot**, and **Looker**.
- Designed, implemented, and maintained **scalable data warehouses** and **ETL pipelines** using technologies such as **Teradata**, **BigQuery**, and **SQL**.
- Collaborated with **stakeholders** to gather and analyze **reporting requirements**, ensuring alignment with **business objectives**.

- Performed **data extraction, transformation, and loading (ETL)** processes to integrate data from multiple sources into centralized repositories.
- Created **interactive visualizations** and delivered **insights** for **business intelligence** and **reporting needs**.
- Utilized **scripting** and **automation tools** such as **Python, Google Apps Script, Knime, and Alteryx** to streamline workflows.
- Conducted **data validation** to ensure accuracy, consistency, and reliability across all **BI systems**.
- Optimized **query performance** for large and complex datasets stored in relational databases like **Teradata** and **BigQuery**.
- Monitored and troubleshooted **BI systems**, ensuring **data accessibility** and **system reliability**.
- Supported **month-end closing processes** for **financial organizations**, ensuring timely and accurate reporting.
- Proficient in **SQL, Teradata, and BigQuery** for data analysis and manipulation.
- Hands-on experience with **BI tools** like **Tableau, Qlik, ThoughtSpot, and Looker** to create and maintain reports.
- Strong knowledge of **ETL processes, data modeling, and data warehousing concepts** for efficient data management.
- Experience with **automation** and **data integration tools** such as **Knime, Alteryx, and Google Apps Script** to improve operational efficiency.
- Proficient in **Excel** for advanced data analysis, including creating pivot tables and complex formulas.
- Familiarity with **cloud-based platforms** like **Google Cloud Platform (GCP)** and **Python** for data management and automation.
- Skilled in **problem-solving** and **critical thinking** to analyze and interpret complex datasets.
- Adept at communicating technical findings to both **technical** and **non-technical stakeholders** for better decision-making.
- Led efforts to ensure **data consistency, security, and governance** across multiple data sources.
- Enhanced **data reporting** by leveraging BI tools to create user-friendly, actionable reports.
- Supported business decision-making by creating data models and performing predictive analysis.
- Worked with cross-functional teams to design and implement **end-to-end** data-driven solutions.
- Created automated systems that significantly reduced manual data processing time and errors.
- Collaborated with teams to develop **scalable data solutions** that accommodated growing data needs.
- Demonstrated strong **interpersonal** and **communication skills**, leading to successful collaboration across teams.

Technical Environment: INFORMATICA 9., Snowflake, ORACLE 11g, XML, MS-Excel, SQL, PL/SQL, Power BI, Tableau.

Data Analyst | Accenture | India

Jan 2022 – Dec 2022

The project focused on predicting loan defaults to enhance risk management for a banking client. As a Data Analyst, I analyzed customer demographics, credit history, and loan data to identify default patterns and risk factors. Conducted exploratory data analysis (EDA) to uncover trends, such as high default rates among low-income groups and loans with high interest rates. Collaborated with the data science team to prepare and select predictive features, achieving a model accuracy of 85%. Designed interactive Power BI dashboards to visualize customer risk profiles and loan trends. The project reduced loan default rates by 15%, improving operational efficiency.

Responsibilities:

- **Data analytics** and **engineering** experience in multiple Azure platforms such as **Azure SQL, Azure SQL Data warehouse, Azure Data Factory, Azure Storage Account** etc. for source stream extraction, cleansing, consumption and publishing across multiple user bases.
- Transformed raw data into actionable insights through **advanced data visualizations** in **Tableau**, enabling clear and impactful business storytelling.
- Designed and implemented **Snowflake data models** to streamline data **storage** and **retrieval, enhancing** data accessibility for **cross-functional teams**.
- Created KPI dashboards to track performance metrics and trends, leveraging **Power BI's** data modeling capabilities to deliver real-time insights for executives.

- Leveraged **SAP** and **Salesforce** platforms to optimize data extraction, transforming it into actionable insights for **business analytics** and **financial reporting**.
- Collaborated with cross-functional teams through **SDLC** to design, implement, and optimize data solutions, ensuring alignment with business needs and compliance standards.
- Conducted **problem-solving** sessions to address complex data challenges, improving **project management** effectiveness and enhancing data quality.
- Developed **Stored Procedures** used by reports to retrieve information from **Relational Database** and **Data Warehouse**.
- Experience in generating **Drill through** and **Drill down** reports with drop down menu option, sorting the data, and defining subtotals in Power BI.
- Developed **User Interactive Sheets & Reports** as per the business needs and requirements.
- Responsible for designing, developing and testing **SSIS** packages and **SSRS** reports to support business initiatives, goal setting, performance management and risk avoidance.
- Gathered data from multiple data sources such as **ADO.net**, **OLEDB**, **Excel & Flat files** in developing logical Data Models.

Technical Environment: SQL Server Management studio, SQL Server Integration Services, SQL Server Reporting Servers, SQL, Excel, .CSV Files, Windows, Power BI, Tableau, Snowflake, Azure services.

Data Analyst | VRJ Technologies | India

July 2020 – Jan 2022

The objective of the project is to develop a predictive model to identify patients at high risk for readmission, enabling healthcare providers to take proactive steps in patient care. By analyzing patient demographics, medical history, treatment details, and post-discharge data, the goal is to uncover key risk factors contributing to readmissions. This information will allow healthcare professionals to optimize discharge planning, enhance follow-up care, and provide targeted interventions to high-risk patients. The project aims to reduce hospital readmission rates, improve patient outcomes, and minimize healthcare costs by leveraging data-driven insights and predictive analytics in patient care management.

Responsibilities:

- Enhanced business intelligence initiatives by automating **data visualization reports** in **Power BI** and **Tableau**, reducing manual reporting time and increasing report accuracy.
- Utilized **Python (Matplotlib, Seaborn)** and **Excel** to generate detailed data visualizations, ensuring clarity and accessibility in executive-level presentations.
- Developed and presented **data-driven insights** to **stakeholders**, demonstrating strong **presentation skills** and the ability to communicate complex analyses clearly.
- Managed data integrations with **ServiceNow** and other enterprise systems to streamline processes and improve reporting accuracy.
- Utilized advanced **business intelligence** techniques to analyze market trends and business performance, guiding executive **decision-making** in alignment with company objectives.
- Implemented **ETL pipelines** for **data ingestion** and transformation, ensuring efficient data flow across **ERP** and **CRM** systems, including **Salesforce** and **ServiceNow**.
- Created **data dictionary**, **Data mapping** for ETL and application support, **DFD**, **ERD**, mapping documents, **metadata**, **DDL** and **DML** as required.
- Generated, **wrote** and run **SQL script** to implement the DB changes including table update, addition or update of indexes, creation of views and store procedures.
- Reviewed and revised **data models** for soundness of **data structures** and adherence to client standards.
- Created naming convention files and co-coordinated with DBAs to apply data model changes.
- Supported data warehouse projects with logical and physical data modeling in **Oracle** environment and assured accurate delivery of DDL to the development teams.
- Responsible in designing new **FACT** and **Dimension Tables** to existing Models.

- Implemented stored procedures, functions, views, triggers, packages in **PL/SQL**.

Technical Environment: Python, Excel, ServiceNow, Salesforce, PL/SQL, Power BI, Tableau, ETL Pipelines, SQL, Oracle.

Education:

- **Master of Science (M.S.) - Management and information systems** – GPA:3.62.
University of Memphis, Memphis, TN (Jan 2023 to May 2024)
- **Bachelor of Technology (B.Tech.)** – Electronics and Communication (Major) – 3.5 GPA
JNTU College of Engineering Sultanpur – India, Hyderabad (July 2017 to May 2021)
