

**SRIKAR REDDY ANUGA**  
**Java Full Stack Developer**

**PH: (980) 228-0801**

**Email: srikarreddy3352@gmail.com**

**Professional Summary:**

- Around **4+** years of IT experience in product/web development including Analysis, development, design, testing, implementation, and maintenance support in **Java/J2EE** technologies. Involving all **SDLC** activities like requirements analysis, design, implementation, reviews, unit testing and production deployments.
- Good understanding and experience in **Functional** and **Reactive** Programming.
- Strong experience in designing and developing **Micro services** and **RESTful** services using **Java, Spring Boot, Spring Web Flux, Spring Reactive (Reactive stack) frameworks**.
- Experience in handling messaging services using **Apache Kafka**.
- Strong experience in designing and developing software systems using **Java, J2EE, Python** technologies.
- Experience in using Design Pattern: Singleton Pattern, Façade Pattern (Session Façade Pattern), **MVC Pattern**, Business delegate Pattern, and Service Locator Pattern, MVC, Factory, Abstract Factory, Service Locator, Visitor, Observer, Decorator, Front Controller and Data Access Object.
- Experience in **Amazon Web Services (Amazon EC2, Amazon S3, Amazon Simple DB, Amazon RDS, Amazon Redshift)**
- Hands on Experience on Servlets, JSPs, Spring Framework, XML, XSD, Restful, **HTML, CSS, JavaScript, AJAX, Hibernate, JDBC with Oracle and MySQL** relational databases.
- Integrated and implemented Continuous Integration, Continuous Deployment/Delivery.
- Experience in implementing complete Software Development Life Cycle (SDLC) using **Waterfall** and **Agile Methodologies** for various applications
- Extensive experience in n-tier architectural design and development of Web applications and stand-alone applications Excellent in deploying the applications in AWS as **EC2** instances and creating snapshots for the data that must be stored in AWS S3.
- Good understanding of NoSQL databases like **Mongo DB and Cassandra**.
- Developed **CI/CD** system with **Jenkins** on **Kubernetes** container environment utilizing Kubernetes.
- Designed and implemented highly available, scalable, and fault-tolerant cloud architectures on **Google Cloud Platform (GCP)** for diverse workloads.
- Utilized Google Cloud's services to create robust solutions tailored to specific business requirements.
- Strong RDBMS expertise worked extensively with **Oracle, PL/SQL**, and coded **stored procedures**, Triggers and Functions using **PL/SQL**.
- Experience in **HTML, JavaScript, React**, and **Angular 6, 8, 10& 11**. Hands-on experience in creating controllers, directives, and filters to deploy the entire business logic.
- Experience with major relational databases - **Oracle 9i, 10g, SQL Server, DB2, and MySQL**.
- Experience in writing **SQL** Scripts in **Oracle, MySQL, Postgres and DB2**.
- Experience in Unit testing, Integration testing and User Acceptance testing using **JUnit**.
- Led a team of developers in building **RESTful APIs** to facilitate seamless communication between various microservices.
- Implemented data processing pipelines using **Pandas** and **NumPy**, handling large datasets for data analysis and visualization.
- Led cross-functional teams in the successful execution of complex cloud migration projects, achieving project milestones and delivering high-quality solutions.
- Led the successful implementation of warehouse management systems (**WMS**) in multiple facilities, ensuring seamless integration with existing enterprise resource planning (**ERP**) systems.
- Orchestrated cross-functional teams to achieve project milestones on time and within budget.

**TECHNICAL SKILLS**

---

**Languages and Java Libraries:** Java, Python, R, Typescript, Hibernate, JPA, JSF, Spring (IOC, AOP, MVC, Boot, ORM, Dependency Injection), Spring MVC, Spring Boot, Spring Security, Spring AI, Junit.

**Web Technologies:** HTML5, DHTML, JavaScript, jQuery, CSS3, AJAX, DOJO, XML, AngularJS, React, REDUX, React Native, Web Services (SOAP, REST, WSDL).

**Databases, Statistical and Viz Tools:** MS SQL, Mongo DB, Tableau.

**Cloud Technologies:** AWS (S3, EC2, RDS, Lambda, Redshift, etc.)

**Other Tools:** ANT, MAVEN, Log4j, Confluence, JUNIT, H2 Database, Postman, Lombok, Git, Confluence, Jira, Docker.

## PROFESSIONAL EXPERIENCE

**Bank of America - Charlotte, NC**

**Jun 2024 – Present**

**Role: Full Stack Developer**

**Responsibilities:**

- Re-designing and building the existing application using **React, Java 11, Spring Boot 2.5.4, Project Reactor, Spring Reactive, Google Cloud Platform, Kafka, IBM MQ, Git, Rest API, Maven**.
- Created responsive and visually appealing user interfaces, enhancing user engagement and satisfaction.
- Leveraged **React**'s context API for efficient state management in complex applications, resulting in improved performance and maintainability.
- Optimized RPC performance by reducing latency and improving throughput through protocol enhancements and network optimizations.
- Integrated RPC frameworks with existing microservices architecture to streamline service interaction and data exchange.
- Integrated third-party libraries and APIs, such as **Redux** and **Axios**, to manage application state and handle asynchronous data fetching seamlessly.
- Utilized **React** Router to implement client-side routing, ensuring a smooth and intuitive user experience during navigation.
- Responsible for the analysis, documenting the requirements and architecting the application based on the **J2EE** standards.
- Hands-on experience in migrating on-premises applications and databases to **Azure**, using tools like Azure Migrate.
- Experienced with **Azure** Arc, Azure Stack, or hybrid networking solutions to extend on-premises environments to Azure.
- Followed agile methodology and involved in daily SCRUM meetings, sprint planning, showcases and retrospective and used **JIRA** as a tracking tool for the sprints.
- Architected and implemented a microservices-based backend with **Node.js and Express**, enhancing scalability and maintainability.
- Used Spring framework along with **HTML, CSS, Node.JS** construct the dynamic web pages (presentation layer) for the application.
- Responsible for implementing **Kafka** consumer groups to achieve consumer present in a group reads data directly from the exclusive partitions and allows for parallel consumption increasing throughput.
- Developed real-time data processing systems with **Kafka and Spark**, handling high-throughput data streams efficiently.
- Worked with **Kafka Streams, Kafka Producer** and **Kafka Consumer APIs** as messaging system between **Microservices**.
- Built dynamic single-page applications (SPAs) using ReactJS and VueJS, achieving a seamless user experience.
- Designed and implemented **RESTful APIs and GraphQL** endpoints with Node.js and Apollo Server, supporting efficient data retrieval.
- Migrated legacy codebases to modern JavaScript frameworks (**ReactJS/VueJS**), resulting in improved maintainability and performance.
- Designed and normalized relational database schemas to ensure data integrity and efficient query performance for various applications.
- Extensively customized **WMS** platforms to meet specific business needs, including workflow modifications, label and report design, and system configurations.

- Implemented and maintained tailored solutions to optimize warehouse operations.
- Engineered automation solutions within the **WMS** to improve inventory accuracy, order picking efficiency, and cycle counting processes.
- Established and monitored **KPIs** to measure and improve warehouse performance, including metrics for order accuracy, on-time shipping, inventory turnover, and labor productivity.
- Integrated RFID technology and Internet of Things (IoT) devices to enhance real-time visibility of inventory and assets within the warehouse.
- Established and monitored KPIs to measure and improve warehouse performance, including metrics for order accuracy, on-time shipping, inventory turnover, and labor productivity.
- Created custom **PL/pgSQL** functions and triggers to automate complex business logic and maintain data consistency.
- Enabled native compilation with GraalVM to produce lightweight, fast-starting native executables for cloud deployments.
- Implemented live coding features in **Quarkus** to enhance development productivity and reduce iteration time.
- Secured sensitive data with role-based access control (RBAC) and encrypted data-at-rest using **PostgreSQL's** native encryption mechanisms.
- Expertise in maven for build **Jenkins**, SonarQube continuous integration
- Designed and implemented complex, scalable, and highly available architectures on **Google Cloud Platform** (GCP) for diverse workloads.
- Developed solutions utilizing a wide range of GCP services to meet specific business requirements.
- Proficient in using **Terraform** and Google Cloud Deployment Manager to automate the provisioning and management of GCP resources.
- Developed custom **Splunk** queries and dashboards to monitor and analyze log data, providing real-time insights into system health and performance.
- Configured data input and parsing using **Splunk** Universal Forwarders, ensuring efficient data ingestion from various sources.
- Integrated **Splunk** with third-party tools and APIs for data enrichment and correlation, streamlining incident investigation.
- Designed and implemented large-scale data processing pipelines using GCP services like **Dataflow, BigQuery, Dataproc, and Datastore**.

**Staples - Framingham, MA**

**JAN 2023 – May 2024**

**Role: Java Full Stack Developer**

**Responsibilities:**

- Worked on the **Java, Python, J2EE**, DB Server and Reporting Services within the technical team using Agile methodology by communicating directly with the Client & Product Owners.
- Used Multithreading, hash mapping, Collections in **core java** to store the list of objects.
- Proficiency in developing Model View Controller (MVC) Architecture based applications using **Spring Frameworks**.
- Developed and Implemented **Web Services** and used **Spring Framework**.
- Developed and Implemented Servlets and JSPs based on MVC pattern using Spring Framework.
- Developed a scalable chat application using **Node.js, ReactJS, GraphQL, and WebSocket**.
- Ensured robust error handling and fault tolerance in **RPC** implementations to maintain system reliability and resilience.
- Experienced in handling different core interfaces, caching mechanisms, and joining strategies using the **Hibernate framework**.
- Worked on **SOAP and Restful web services** to get the data from the server and integrated the Java code (API) in JSP Pages.
- Developed and maintained Python-based microservices for an e-commerce platform using FastAPI.

- Hands on experience in working with **Spring Boot**.
- I used **Spring Boot and spring MVC framework** for the application design.
- Widely working with all spring modules like spring MVC, spring cloud, spring integration, spring boot, spring security.
- Used **JSON** to test web services API calls.
- Deployed **Quarkus** applications on Kubernetes and OpenShift, taking advantage of Quarkus cloud-native capabilities for efficient scaling and management.
- Orchestrated and managed a fleet of **Amazon EC2** instances across multiple availability zones to host a scalable and fault-tolerant web application, ensuring high availability and performance.
- Implemented automated **EC2** instance provisioning and configuration using **AWS CloudFormation** and user data scripts, reducing deployment time and increasing infrastructure as code (IaC) adoption.
- Utilized **Amazon S3** as a highly durable and cost-effective storage solution to store and distribute static assets, including images, videos, and downloadable files for web applications.
- Configured data lifecycle policies in **S3** to automatically transition infrequently accessed data to cheaper storage classes, optimizing storage costs while maintaining accessibility.
- Managed and optimized **Amazon RDS** for **PostgreSQL**, handling terabytes of data with automated backups, high availability, and scalability to meet growing application demands.
- Executed database schema migrations and managed data consistency during application updates using **Amazon RDS** Multi-AZ deployments, ensuring minimal downtime and data integrity.
- Developed Servlets and JSP pages based on MVC pattern using Spring Framework.
- Established connections with other applications by using **RabbitMQ** and JMS.
- Enhanced application responsiveness and resilience by leveraging **Vert.x's** concurrency model and asynchronous programming features.
- Extensively used RabbitMQ for message communication between applications.
- Implemented advanced inventory control techniques, including cycle counting, and slotting optimization, resulting in a significant reduction in carrying costs and improved accuracy.
- Introduced dynamic replenishment strategies to ensure optimal stock levels.
- Designed and managed **WMS** workflows to support omnichannel order fulfillment, including e-commerce, wholesale, and brick-and-mortar sales channels.
- Implemented strategies for order routing and prioritization based on customer service level agreements (**SLAs**).
- Implemented barcode scanning and **RFID technologies** to enhance tracking and traceability.
- Implemented custom machine learning pipelines using TensorFlow and integrated them into production environments.
- Utilized Kubernetes Engine for container orchestration, enabling seamless deployment and scaling of microservices.
- Conducted security assessments, **vulnerability** scanning, and compliance audits to ensure adherence to industry standards and best practices.
- Configured auto-scaling and load balancing to ensure high availability and fault tolerance of critical applications.
- Worked with **Node.js** environment set-up and interacted Node Service team to get the Service.
- Developed Graphical User Interfaces using **Struts, JSP, jQuery and JavaScript**.
- Used Maven for compilation, packaging and deployment in the Apache Tomcat and Web Sphere Application servers.
- Used **Bit bucket/GIT** for version control.
- Developed JUnit test cases for all the developed modules.
- Used **JIRA** for tracking work items and communicating with testers, developers, and program managers.

## Responsibilities:

- Work as an **SQL/Java Developer** and establish strong relationships with end users and technical resources throughout established projects.
- Extensive experience building single page applications (SPA) using **AngularJS** with expertise in creating User Controls, Web Forms and client-side validations using **JavaScript, jQuery, and AngularJS**.
- Used Node Package Manager (**NPM**) to manage the modules and used it to install useful tools.
- Designed the application modules, base classes and utility classes using **core Java**.
- Developed graphical user interfaces by using **JSP, HTML, CSS, and JavaScript**.
- Designed and implemented customized exception handling to handle the exceptions in the application.
- Responsible for validation of client interface using **JavaScript and jQuery**.
- Involved in publishing reports and processing information critical to running company's business.
- Defines, develops, and documents the application's business requirements, objectives, deliverables, and specifications on a project-by-project basis in collaboration with internal users and external clients.
- The SQL Server Developer will work closely with Application Developers to ensure proper design and implementation of database systems.
- Involved in publishing reports and processing information critical to running company's business.
- Created Database Objects like Tables, Stored Procedures, Views, Joins, Triggers, & Functions.
- Writing optimized **SQL** queries for integration with other applications, created standard tables and mapped columns from various client tables.
- Created database triggers for use in automation, created after and instead of triggers to enforce data consistency and referential integrity.
- Troubleshoot performance problems and fine-tuning of databases.
- Used **JIRA** to log, track and report defects.
