

SRINATH POLASANI

Software Engineer

Maryland, USA | Mobile: (551) 888-0826 | Email: srinathpolasani8@gmail.com

SUMMARY

- Software Engineer with 5+ years of experience developing robust microservices and RESTful APIs using Java with Spring Boot and Python with Flask, Django, and FastAPI, ensuring high performance, scalability, and maintainability across diverse projects.
- Experience in end-to-end web application development using HTML, CSS, Bootstrap, JavaScript, TypeScript, ES6, React, Redux, and Angular, delivering seamless user experiences.
- Adept in server-side development with Java, Python, C++, utilizing Servlets, JSP, JDBC, JUnit, and JMS, and employing multi-threading for optimal performance.
- Applied Waterfall, Agile Scrum, and Agile Kanban methodologies, actively participating in sprint cycles, ensuring efficient project delivery and continuous improvement.
- Skilled in using NetBeans, IntelliJ IDEA, Eclipse, and Visual Studio Code for streamlined and efficient code development.
- Proficient in RESTful and SOAP API design, and documentation with Swagger Open API, ensuring standardized and interoperable communication.
- Advanced knowledge of SQL, MongoDB, PostgreSQL, and MySQL, employing Spring Data JPA for efficient data access and manipulation.
- Utilized Mockito, React Testing Library, and Jest for comprehensive unit and integration testing, ensuring robust and reliable code.
- Experience with AWS, Azure services, Docker and Kubernetes for containerization, and deployment on Apache Tomcat and WebLogic servers, ensuring a scalable and reliable infrastructure.

SKILLS

Frameworks	Bootstrap, React JS, Redux, Angular, Spring Boot, Spring MCV, Spring Data JPA, Hibernate ORM, Node JS, Vue.js, Flask, Django, FastAPI, Tornado, Bottle, Backbone JS, Ember JS, D3.js
Web Technologies	HTML, CSS, JavaScript, Typescript, ES6, Ajax, REST API
Languages	Java, Python, C++, Scala
Java/J2EE Technologies	Servlets, JSP, EJB, JNDI, JTA, JavaMail, JAX-RS, JAX-WS, JPA, JCA, JSF, JDBC, JUnit
Methodology	Waterfall, Agile Scrum, Agile Kanban, Test-Driven Development (TDD)
IDEs	NetBeans, IntelliJ IDEA, Eclipse, Visual Studio Code
Web Services	RESTful, SOAP, WSDL, WADL, SwaggerOpen API
Database Technologies	SQL, PL/SQL, MySQL, SQL Server, PostgreSQL, Oracle, NoSQL, MongoDB, Cassandra, Azure Cosmos DB
CI/CD & Tools	Jenkins, Codeship, AWS CodePipeline
Testing tools	Mockito, React Testing Library, Jest, Selenium, Apache JMeter
Cloud & Deployment	AWS (EC2, S3, RDS, Lambda, SQS, IAM, CloudWatch), Azure(VMs, AKS, App Service, Blob Storage, Function), Azure DevOps, Docker, Kubernetes, Terraform
Web Server	Apache Tomcat, JBoss, WebLogic, WebSphere, Jetty
Tools/Platforms	Jira, Git, SVN, GitHub, Bitbucket, SonarQube, JFrog, HashiCorp Vault, Splunk, Snowflake, Apache Ant, Apache Maven, Gradle, Prometheus, Grafana, ELK Stack, Databricks, Datadog, POSTMan
Messaging Technologies	IBM MQ, RabbitMQ, JMS
Operating Systems	Windows, LINUX, Mac iOS.

EDUCATION

Master of Science in Information Systems – University of Maryland, Baltimore County, USA

Bachelor of Technology in Electronics & Communication Engineering – SR International Institute of Technology, INDIA

EXPERIENCE

Capital One, MD | Software Engineer

August 2022 – Current

- Gathered and analyzed the requirements and converted them into User Requirement Specifications and Functional Requirement Specifications for the designers and developers to understand them as per their perspective.
- Developed robust microservices and RESTful APIs using Java, Spring Boot, and Python frameworks (Flask, Django, FastAPI), ensuring high performance and scalability.
- Developed and maintained web applications using HTML4/5, XHTML, CSS2/3, JavaScript, Ajax, JSON, jQuery, Angular, and React.
- Engineered and optimized relational and NoSQL databases (MySQL, PostgreSQL, MongoDB) with PLSQL queries, achieving a 40% reduction in query response time and enhancing data retrieval efficiency for 10+ applications
- Designed and developed RESTful APIs using Python and FastAPI, leveraging asynchronous programming for high-performance and scalable backend solutions..
- Worked one-on-one with financial client to develop layout, color scheme for his web application and implemented it into a final interface design with the HTML5/CSS3 & JavaScript, Angular.
- Integrated Angular applications with backend services via RESTful APIs and enhanced user experience by designing new web features using the Angular MVC framework.
- Deployed containerized applications on AWS ECS, integrated with Lambda, RDS, and API Gateway, enhancing scalability, cost-efficiency, and security through IAM policies. Configured AWS CodePipeline and CodeBuild for continuous integration and continuous deployment (CI/CD), streamlining development workflows.
- Integrated RESTful APIs developed in Django with Angular front-end, ensuring seamless data flow and synchronization.
- Utilized Informatica to design and implement an ETL pipeline for a platform, ensuring efficient data extraction and transformation from cloud sources.
- Implemented Docker's versioning and rollback capabilities, ensuring a quick and reliable rollback mechanism in case of issues in financial project.
- Enhanced application through Kotlin and GraphQL feature integration; reduced server load by 20%
- Utilized JIRA for creating and updating tickets for development, testing, and bug fixes during sprints.

HCLTech Technology, India | Full Stack Developer

June 2018 - August 2021

- Implemented dynamic and responsive user interfaces using React.js, and optimized database queries for a 50% faster response time, ensuring an intuitive and user-friendly experience tailored for healthcare professionals.
- Utilized Django's ORM for efficient database interactions and streamlined backend development processes.
- Created Python-based APIs for seamless interfacing with medical devices, promoting direct input of diagnostic data into patient records and reducing manual errors.
- Utilized MySQL for structured data storage, organizing healthcare-related data into tables, each serving a specific purpose within the overall information management system.
- Utilized Kubernetes Deployments to scale microservices dynamically, adjusting the number of replicas based on demand to maintain consistent healthcare service availability.
- Clearly defined and documented API endpoints using Swagger annotations, providing a standardized and easily understandable format for healthcare-related functionalities.
- Utilized appropriate HTTP methods (GET, POST, PUT, DELETE) for healthcare API endpoints, aligning with the intended operations on healthcare data.
- Developed secure APIs with FastAPI, implementing JWT-based authentication and role-based access control (RBAC) to safeguard sensitive data and functionalities.
- Implemented continuous integration pipelines using Jenkins, ensuring automated testing and deployment for applications within the Healthcare Information Management System.
- Defined SQLAlchemy models to represent healthcare entities (patients, doctors, appointments) as Python classes, providing a clear and Pythonic representation of the database schema.
- Managed cloud applications on Microsoft Azure, leveraging Azure App Services, Azure SQL Database, and Azure Functions to optimize scalability and reliability.
- Managed Apache Kafka for data streaming and Apache JMeter for load testing to ensure system performance and scalability.
