PROFILE SUMMARY

Over 5 years of experience developing enterprise-grade applications using Java, Spring Boot, and microservices. Expertise in creating scalable solutions with front-end frameworks like React and Angular, complemented by containerization using Docker and Kubernetes. Proven skills in cloud deployment on AWS, Azure, and GCP, along with comprehensive CI/CD and DevSecOps practices to ensure secure, efficient deliveries.

TECHNICAL SKILLS

- **Programming Languages:** Java (8-17), JavaScript (ES6+), TypeScript, Python, C++, Groovy, SQL, PL/SQL, Bash, PowerShell
- **Frontend Technologies:** React.js, Angular, AngularJS, Vue.js, Redux, NgRx, RxJS, Bootstrap, HTML5, CSS3, Sass, AJAX, jQuery, Responsive Design, JSX
- **Backend Frameworks & Technologies:** Spring Boot, Spring MVC, Spring Security, Hibernate (ORM, Caching, HQL), Node.js, Express.js, JAX-RS, JDBC, Spring Cloud, Spring Batch, GraphQL, Domain-Driven Design (DDD), Microservices Architecture
- **Databases & Querying:** PostgreSQL, MySQL, Oracle, MongoDB, Cassandra, DynamoDB, Redis, Graph Database, NoSQL, Stored Procedures
- **Web Services & APIs:** RESTful APIs, SOAP, WebSockets, Swagger/OpenAPI, OAuth 2.0, OpenID Connect, JWT
- **Cloud Platforms:** AWS (EC2, Lambda, S3, RDS, API Gateway, CloudFront, CloudWatch, ECS, EKS, IAM), Azure, Google Cloud Platform (GCP), Cloud Providers
- **DevOps & CI/CD:** Docker, Kubernetes, Jenkins, GitHub Actions, Azure DevOps, Terraform (IaC), Bamboo, Chef, Maven, Gradle
- **Build & Version Control Tools:** Git, GitHub, Bitbucket, SVN
- **Testing & QA:** JUnit, TestNG, Mockito, Selenium, Cucumber, Postman
- **Messaging & Streaming:** Apache Kafka, JMS, RabbitMQ, MQTT/IoT
- **Monitoring & Logging:** Splunk, SonarQube, Nagios, AppDynamics, ELK Stack, JIRA
- **IDEs & Developer Tools:** IntelliJ IDEA, Eclipse, Visual Studio Code, Spring Tool Suite
- **Architecture & Methodologies:** Agile (Scrum), Test-Driven Development (TDD), Behavior-Driven Development (BDD), Continuous Integration/Continuous Deployment (CI/CD), Software Development Life Cycle (SDLC)
- **Soft Skills:** Team Collaboration, Problem-Solving, Analytical Thinking, Adaptability, Mentoring, Cross-functional Collaboration

PROFESSIONAL EXPERIENCE

Charter Communications

Java Full Stack Developer

Sep 2024 - Present

Stamford, CT

Designed and developed front-end and back-end systems using Java 17, Spring Boot, and React.js, aligning with enterprise requirements for robust microservices and responsive UIs.

- Utilized AWS Lambda for serverless compute, automating administrative tasks and integrating cloud-based functions with CI/CD pipelines managed via Jenkins and Gradle.
- Applied DAO design pattern with Hibernate ORM for efficient persistence and connectivity with PostgreSQL, ensuring reliable data access in a microservices architecture.
- Developed scalable Spring Boot microservices and implemented batch jobs using Core Java with multithreading, while automating Linux shell scripting tasks for improved operational efficiency.
- Migrated relational data from SQL Server to Cassandra; authored efficient CQL queries and utilized NoSQL CouchDB to support schema-free design for distributed storage.
- Enabled Cross-Origin Resource Sharing (CORS) with Node.js and built scalable RESTful APIs using Express.js and Mongoose, ensuring seamless API integration.
- Provisioned cloud infrastructure using Terraform for AWS Lambda, API Gateway, and containerized microservices, supporting consistent deployment practices across environments.
- Engineered responsive Single Page Applications (SPAs) using React.js, Angular (NgRx, RxJS), HTML5, CSS3/LESS, and Bootstrap to deliver robust client-side experiences.
- Constructed scalable RESTful APIs with Express.js integrated with MongoDB and secured backend operations through Spring Security-based RBAC policies.
- Collaborated on internal proofs-of-concept using Vue.js to explore component-based web application development.
- Created Hibernate mappings (XML and annotations) and developed RESTful microservices using Spring Boot and Spring REST, addressing critical business requirements.
- Configured SonarQube and Nagios for continuous code quality checks and system health monitoring, aligning with DevSecOps principles.
- Developed unit tests using JUnit, Mockito, and Selenium for both API and UI validation, ensuring consistent application behavior.
- Leveraged Angular CLI and Webpack to scaffold and build Angular applications, incorporating unit tests with Jasmine.

- Implemented microservice APIs via AWS API Gateway and deployed containerized applications using Docker and ECS, reinforcing cloud-native strategies.
- Utilized advanced Java 17 features such as Method References and Functional Interfaces to enhance code quality and maintainability.
- Configured distributed tracing with Zipkin and centralized logging through the ELK Stack, reducing issue resolution time by 30%.
- Achieved Zero Downtime Deployment using Kubernetes, ensuring seamless updates to live applications without service interruption.
- Coordinated multi-resource transactions across microservices via Spring Transaction Management APIs, reinforcing data integrity.
- Optimized JVM performance by tuning heap size and garbage collection parameters on WebLogic and JBoss application servers.

Travelers

Oct 2023 - Aug 2024

Java Full Stack Developer

Hartford, CT

Developed and integrated RESTful APIs using Java 8, Spring Boot, and JAX-RS to seamlessly connect frontend components built with React.js to backend services.

- Engineered application-layer persistence using Hibernate and Spring Framework, implementing a microservices architecture to support dynamic client-server interactions.
- Deployed Spring Boot microservices on AWS EC2 containers, ensuring scalable and resilient cloud deployments.
- Enhanced observability using Splunk dashboards and alerts, reducing mean time to detect (MTTD) production issues in cloud-hosted applications.
- Built responsive Single Page Applications (SPAs) using Node.js, React.js, and Backbone.js under an MVC architecture for dynamic client-side rendering.
- Applied Groovy scripting to optimize CI/CD pipelines in Jenkins, automating test execution and deployment processes.
- Implemented rigorous unit tests using Mocha and Chai for React components, ensuring code quality and regression prevention.
- Developed BDD test scenarios with Cucumber and Selenium to support acceptance testing and validate end-to-end functionality.
- Leveraged Java 8 features, including lambda expressions and the stream API, for efficient data processing and collection handling.
- Constructed RESTful web services using JAX-RS integrated with Spring Boot modules, facilitating enterprise data exposure to client applications.
- Developed annotation-driven Spring Boot applications with dedicated Spring Profiles, secured by Spring Security, OAuth 2.0, and OpenID Connect for unified SSO.
- Engineered SOAP-based web services utilizing JAXP, XML, and XSLT while securing backend connectivity through JDBC.
- Integrated Spring Security for enhanced role-based access control, reinforcing data protection for both internal and client-facing systems.
- Built responsive, cross-browser UI components using React 18, HTML5, CSS3, Bootstrap 4, JavaScript, and jQuery, ensuring consistent user experiences.
- Conducted unit testing with JUnit and performance testing with JTest to validate application reliability under Agile Scrum practices.
- Exploited advanced Java 8 features to develop multi-threaded services for high-volume insurance data processing.
- Managed version control using SVN, Git, and Bitbucket for streamlined distributed codebase management.
- Orchestrated multi-threaded synchronization and JMS queues handling to process asynchronous messages efficiently.
- Deployed scalable applications on Pivotal Cloud Foundry (PCF), leveraging platform-as-a-service benefits in a cloud-native environment.
- Implemented migration strategies involving GCP services alongside AWS-hosted applications to support modern cloud deployments.
- Utilized Docker to manage containerized environments and coordinated deployments with Kubernetes for high-availability solutions.
- Leveraged MongoDB for managing semi-structured data with its JSON document model to ensure scalability and performance.

A.P. Moller – Maersk

Jun 2021 - Jun 2023

Java Full Stack Developer

Bangalore, India

Built intuitive and responsive user interfaces employing CSS3, JavaScript, and modern frameworks like Angular and React.js, aligning with FullStack development best practices.

- Deployed static websites and Node.js APIs using a serverless architecture on AWS, integrating API Gateway, AWS Lambda, Lambda@Edge, CloudFront, DynamoDB, and S3 to achieve scalable and cost-efficient solutions.
- Leveraged Hibernate ORM for optimized persistence operations, HQL queries, and robust transaction management across distributed microservices.
- Designed and developed a data validation service for ETL pipelines, executing validations on large datasets in a Linux-based environment.
- Constructed modular Angular components and implemented backend integrations using Node.js, ensuring scalable development of web applications.
- Managed CI/CD pipelines via Jenkins to streamline code integration and deployment within Eclipse IDE environments.
- Developed real-time, cross-platform web applications using Node.js, Backbone.js, and AngularJS to serve JSON documents from MongoDB via RESTful APIs.
- Designed event-driven logistics services by integrating MQTT protocols with Apache Kafka pipelines, enabling real-time shipment tracking.
- Utilized AWS CloudWatch alongside ALB and performance testing with ELB, successfully simulating over 5000 requests to verify system robustness.
- Conducted integration testing for backend services and microservices using JUnit and Postman to ensure systemic compatibility.
- Extended backend services with GraphQL APIs to provide flexible client-side data queries, improving efficiency in ETL validations.

- Authored Java APIs to facilitate programmatic management of AWS Lambda services, enhancing automation in infrastructure management.
- Automated AWS infrastructure provisioning using Terraform, specifically configuring Lambda functions and API Gateway setups.
- Integrated MQTT-based IoT messaging with Kafka pipelines to support real-time tracking in event-driven logistics systems.

Bupa

Java Developer

Apr 2020 - May 2021

Bangalore, India

Created robust server-side applications using Java and Spring Framework to handle complex business logic and database interactions in a high-availability environment.

- Designed dynamic front-end interfaces based on wireframes using JavaScript, jQuery, Angular, and Bootstrap to ensure responsive user experiences.
- Implemented back-end services using Spring Framework, Hibernate, and XML, leveraging Eclipse IDE and ANT for version control and build automation.
- Maintained 24/7 high-volume applications on Linux, Apache, PHP, and MySQL, ensuring optimal performance and uptime consistent with enterprise standards.
- Developed and configured RESTful web services with lightweight WADL for enhanced documentation and understanding of API endpoints.
- Engineered complex PL/SQL procedures and applied BPM workflows to streamline healthcare claim processing and improve query performance.
- Constructed Microservices with Spring Boot and Spring Cloud, applying Domain-Driven Design (DDD) principles to delineate service boundaries effectively.
- Developed interactive UI components using React.js with Redux, jQuery UI, HTML5, CSS3/LESS, and Bootstrap while enforcing cross-browser compatibility.
- Participated in Agile/Scrum & conducted Test-Driven Development (TDD) to ensure code reliability from requirement analysis through implementation.
- Utilized IBM MQ to support a unified messaging transport layer that accommodates HTTP, REST, and JMS communications.
- Deployed applications on Pivotal Cloud Foundry (PCF) with service binding and connection injection to streamline cloud deployment processes.
- Assembled dynamic web interfaces with HTML5, CSS3, JavaScript, jQuery, Angular, and Bootstrap, reinforcing visual consistency and usability.
- Established CI/CD pipelines using Jenkins, Docker, and OpenShift for automated build, test, and deployment of Spring Boot Microservices.
- Deployed and tested enterprise applications on WebLogic Application Server, leveraging clustering and performance optimization techniques.
- Led design, development, and deployment of a Product Lifecycle Admin Portal using Spring MVC within an MVC architecture and Front Controller design pattern, ensuring modular and maintainable code.

EDUCATION

University of New Haven, West Haven, CT, USA
