Education

-
- University of California, Los Angeles** *M.S. in Applied Statistics and Data Science* Sept 2025 - June 2027
- University of California, Irvine** *B.S. in Data Science & B.A. in Business Economics* Sept 2020 - June 2025
- **Relevant Coursework:** Machine Learning & Mining, Data Structures & Algorithms, and Data Analytics

Experience

-
- Data Analyst Research Assistant**, UCI – Irvine, CA June 2023 – March 2025
- Led a research team to analyze preoperative biopsy rates in patients with malignant kidney cancer.
 - Extract and process large datasets with over 100, 000 entries from extensive databases to support various research initiatives.
 - Perform statistical analyzes and generate insights to assist researchers in developing data-driven conclusions.
 - Develop clear and concise data visualizations using tools such as Tableau, Python, and SQL.
- Web Designer/Developer Intern**, Mucci Assessment – Long Beach, CA June 2023 – Sept 2023
- Conducted market research and ROI analysis to identify high-growth market segments that lead to development of new business proposals.
 - Collaborated closely with cross-functional teams by preparing charts and graphs to support managers in making informed data-driven decisions.

Projects

-
- Cotality Market Hotness** github.com/csranks/
- Developed a machine learning-driven forecasting pipeline to predict real estate market competitiveness using a custom Hotness Index
 - Analyzed housing data across 50+ counties with time series methods; delivered weekly insights and forecasts to stakeholders in a cross-functional team setting
- Full-Stack Movie Search Engine** github.com/fabflix/
- Designed a scalable full stack movie search platform using Java, MySQL, Tomcat, and Apache with session-aware load balancing and master-slave database replication on AWS.
 - Optimized SQL queries and servlet logic to deliver real-time, filterable insights from movie data; implemented connection pooling and master-slave replication to improve query efficiency under user load.
- Computer Science Research Ranking** github.com/csranks/
- Standardized author names by normalizing variations using heuristics (e.g., name length, initials), selecting the most complete form, and parsing into first, middle, and last name fields.
- Yelp Star Review Predictor** github.com/yelpreview/
- Cleaned and preprocessed text data by removing stopwords, tokenizing, and lemmatizing; used GloVe and BERT.
 - Built and trained deep learning models (LSTMs, RNNs, Transformers) in PyTorch and TensorFlow to predict Yelp business star ratings from user reviews.
 - Achieved 80% accuracy and strong F1 scores across multiple classes.

Technical Skills

Languages: SQL, R, Python, C, Java

Database/Server: MySQL, Postgres, SQL Server

Developer Tools: Git, Github, Tableau, Excel, VS Code

Cloud & DevOps: AWS (EC2, RDS), Apache, Tomcat
