Experienced data engineer with a demonstrated history of working in the computer software industry looking for a position in data analytics and programming

Skills

Python, SQL, R, Excel, VBA, Tableau, Power BI

EXPERIENCE

JULY 2021 – JANUARY 2024

DATA ENGINEER, ELLKAY, ELMWOOD PARK, NEW JERSEY

- Manage and design over 50 VIP projects from inception to product sign-off, implementation delivery of clinical files and cloud-based products for Electronic Medical Record (EMR) systems
- Use big-data tools and software such as AWS, Azure, MSSQL, and Oracle to perform data analysis, data manipulation, and ETL
- Work on up to eight projects simultaneously to create Azure-based websites which allow clients to navigate their clinical data on a web-based interface with user-friendly tools to build custom reports and data visualizations
- Utilize SQL, stored procedures, functions, indexes, and partitions to analyze data and resolve technical issues that occurred during data conversions.
- Work cross-functionally across the organization to ensure its data capabilities can be enhanced and transformed to support clients' complex requirements and meet timelines

DECEMBER 2020 – JULY 2021

DATA ENGINEER, CENTERS HEALTH CARE, NEW YORK, NEW YORK

- Maintain and manage a proprietary data pipeline that distributes data from thousands of lab tests, including covid tests
- Use Excel skills to create 11 interactive sheets that use advanced functions and macros to automate effective data entry, storage, and visualization
- Support communications technology, identify errors in system, and clean incoming data
- Create medical data report CSV files for the DOH, clients, and health insurance agencies
- Automate important daily reports and concerns using Python, Selenium, and VBAs

EDUCATION

OCTOBER 2019
