

Suhan Suresh

New York, NY 10019 | 518-389-8235 | suhansuresh@gmail.com | www.linkedin.com/in/suhan-suresh

SKILLS

Programming & Analytics: SQL (MySQL, PostgreSQL, Oracle), Python (Pandas, NumPy, Scikit-learn, Statsmodels), Excel (Advanced Functions, Pivot Tables, Dashboards), IBM Cognos Analytics

Data Visualization & BI: Tableau, IBM Cognos, KPI Dashboards, Cohort Analysis, A/B Testing, Data Storytelling for Technical & Non-Technical Stakeholders

Data Management & Warehousing: ETL/ELT Pipelines, Data Cleaning & Transformation, Snowflake, Data Modeling (Star & Snowflake Schemas), Data Governance & Validation

Collaboration & Tools: GitHub, JIRA, Docker, Agile, IBM WebSphere, Java/ECore Framework, Stakeholder Communication & Presentation

EXPERIENCE

NY State Office of Information Technology Services

Albany, NY

Software Engineer

November 2025 – May 2026

- Designed and implemented an 8-screen structured data collection pipeline within NYS's enterprise eMPIRE system, capturing taxpayer identity, income, dependent details, and filing eligibility data in a validated, consistently typed domain model — purpose-built for clean downstream reporting and analysis.
- Translated complex NYS tax rules — EIC qualification thresholds, CDCC eligibility conditions, dependent relationship classifications, and multi-jurisdiction withholding fields — into enforced data validation logic, ensuring governance-compliant, analysis-ready data at the point of entry across all filing workflows.
- Completed IBM Cognos Analytics certification, directly expanding the team's BI and self-service reporting capability on existing government data infrastructure.
- Documented end-to-end data flow and system behavior across 5 source files for non-technical stakeholders and management, producing plain-English data lineage explanations that improved cross-functional alignment and accelerated decision-making.

OurEyesOnly

New York, NY

Data Analyst

May 2025 – Present

- Drove a 20% increase in campaign ROI by applying SQL and Python statistical analysis to user engagement and campaign performance data, surfacing targeting inefficiencies that directly reshaped audience segmentation strategy.
- Eliminated 35% of inventory stockouts by engineering Python restock alert automation integrated with dbt/ETL pipelines, replacing a fully manual forecasting process with a scalable, data-driven system.
- Designed and executed A/B testing frameworks in Python to quantify conversion impact of campaign variations with statistical significance, directly influencing product drop strategies and improving unit sales performance.
- Built and maintained executive-facing Tableau dashboards for KPI monitoring with embedded data validation and governance checks, improving reporting accuracy and reducing stakeholder escalations.

Regeneron Pharmaceuticals

Remote

Data Analyst Intern

June 2024 – August 2024

- Improved clinical trial data accuracy by 25% by auditing EHR-to-EDC pipelines and authoring Python and SQL validation scripts that systematically surfaced and resolved discrepancies across multiple trial datasets.
- Reduced manual reporting effort across multiple clinical trial teams by automating KPI tracking in Python and Excel, replacing recurring ad hoc pulls with a self-refreshing pipeline that improved operational visibility.
- Strengthened alignment between data engineering and clinical operations by delivering structured findings to cross-functional stakeholders, improving compliance with pharmaceutical data quality standards.

Sentry Data Systems

Remote

Data Analyst Intern

June 2023 – August 2023

- Cut average query runtime by 40% through targeted SQL optimization on Oracle and SingleStore databases, directly accelerating performance dashboards supporting healthcare operations and client reporting across multiple teams.
- Reduced critical issue response time by 48% by co-designing real-time alert systems built from operational log data, replacing a reactive monitoring process with proactive, automated detection.
- Delivered ad hoc SQL and Excel financial and performance reports to senior leadership, providing actionable insights that informed strategic resource allocation decisions across multiple operational teams.

EDUCATION

New York University

New York, NY

Bachelor of Arts in Computer Science

May 2025

Relevant courses: Data Management Analysis, Algorithms, Software Engineering, Natural Language Processing
